Papers were submitted from over 25 countries. After a rigorous review process, 39 papers were accepted as full papers and 14 papers as short papers for presentation at the conference and published in these proceedings. In addition to the above three events, we also organized a Doctoral Consortium to provide a forum for doctoral students to get feedback from experts in the area about their research projects.

Transactions on Large-Scale Data- and Knowledge-Centered Systems XLII Abdelkader Hameurlain,Roland Wagner,2019-10-17 The LNCS journal Transactions on Large-Scale Data- and Knowledge-Centered Systems focuses on data

management, knowledge discovery, and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. Current decentralized systems still focus on data and knowledge as their main resource. Feasibility of these systems relies basically on P2P (peer-to-peer) techniques and the support of agent systems with scaling and decentralized control. Synergy between grids, P2P systems, and agent technologies is the key to data- and knowledge-centered systems in large-scale environments. This, the 42nd issue of Transactions on Large-Scale Data- and Knowledge-Centered Systems, consists of five revised selected regular papers, presenting the following topics: Privacy-Preserving Top-k Query Processing in Distributed Systems; Trust Factors and Insider Threats in Permissioned Distributed Ledgers: An Analytical Study and Evaluation of Popular DLT Frameworks; Polystore and Tensor Data Model for Logical Data Independence and Impedance Mismatch in Big Data Analytics; A General Framework for Multiple Choice Question Answering Based on Mutual Information and Reinforced Co-occurrence; Rejig: A Scalable Online Algorithm for Cache Server Configuration Changes.

Corporate Responsibility and Digital Communities Georgiana Grigore, Alin Stancu, David McQueen, 2017-11-27 This book explores conceptualizations of CSR and sustainability in the digital economy, focusing upon points of intersection between CSR and online communities. Reflecting on new areas of responsibility that organisations must face in a globalised economy, the contributions explore the ways CSR is being communicated, challenged and reshaped in a rapidly evolving online context. Up-to-date research from around the world shows how diverse communities, citizens and stakeholders are engaging with, and making demands on, organisations in novel ways that pay little respect to international borders. With online communities increasingly influencing the way in which business is carried out and perceived, the case studies explored here offer a useful indication of the variety of new developments and controversies that have emerged in the field of CSR. This book will appeal to postgraduate students and researchers of CSR and CSR communications, as well as communication, public relation and corporate responsibility practitioners.
