Advances in Nephropathy Thomas Rath, 2018-10-24 Chronic kidney disease (CKD) is a world-wide known disease affecting up to 4% of the population with increasing figures in developing countries. Life expectancy of patients affected by CKD is shortened compared to the overall population and only a minority of patients reach end stage renal disease (ESRD) with the need for dialysis or renal transplantation; death overtakes dialysis. In nine chapters, this book focuses on different aspects related to the pathophysiology and clinical aspects of CKD, providing interesting insights into new and old biomarkers, allowing us to increase diagnostic and prognostic meaningfulness. In addition, chapters deal with new developments in glomerulopathies, but also aspects of the tubulocentric shift will be beneficial for the open-minded reader. Nevertheless, new insights into chronic kidney disease (CKD) and acute kidney injury (AKI) are provided.

Oxford Textbook of Neuropsychiatry Niruj Agrawal, Rafey Faruqi, Mayur Bodani, 2020-08-25 A survey of over 900 trainees at the Royal College of Psychiatrists (RCPsych) in the United Kingdom showed that over three-quarters of psychiatry trainees desired some knowledge and training in the field of neuropsychiatry. Recent years have given rise to a substantial global focus on integrating neurosciences and neuropsychiatry in psychiatric training. Neuropsychiatry forms an important part of the psychiatric curriculum and is examined in theory and in clinical exams. Similarly, neuropsychiatry is also of interest to neurology trainees, and it is increasingly recognised that all neurology trainees should have some knowledge and experience in neuropsychiatry. Despite this growing interest, there is a dearth of neuropsychiatry textbooks specifically geared towards trainees and other clinicians who are not specialist in the field. Part of the Oxford Textbooks in Psychiatry series, the Oxford Textbook of Neuropsychiatry helps to bridge the gap between general psychiatric textbooks and reference texts in neuropsychiatry. Organised into four sections, the book covers the basic knowledge and skills relevant to neuropsychiatry, the various neuropsychiatric conditions, the principles of treatment, and perspectives for neuropsychiatry worldwide. Chapters have been written by international experts who are leaders in their own fields with the view to taking an evidence-based, up-to-date, global perspective on neuropsychiatric problems and treatment. The book is relevant to trainees in psychiatry, neurology, neurorehabilitation and also to various allied professionals in neuroscience and mental health. It covers core knowledge and skills for practice in all psychiatric disciplines including core knowledge for training in neuropsychiatry. The book meets curriculum requirements for various international training programmes and examinations, and serves as an essential training text book for all psychiatric and neurology trainees worldwide.

Are COL4A1 and COL4A2 Gene Polymorphisms Associated with Cerebral Palsy ? Melek Sezgin, 2017 ARE COL4A1 AND COL4A2 GENE POLYMORPHISMS ASSOCIATED WITH CEREBRAL PALSY ? Introduction: Although, prematurity, low birth weight and hypoxic-ischaemic injury are the most recognized risk factors in Cerebral Palsy (CP), one-third of them have not any risk factor, a genetic condition may be suspected. Collagen type IV Alpha1 (COL4A1) and Alpha2 (COL4A2) are extracellular-matrix-proteins presenting in basement membranes. Recent studies reported that intracerebral hemorrhage, porencephaly, diffuse and periventricular leukoencephalopathy associated with variations in COL4A1 and COL4A2 genes. Purpose: To investigate the COL4A1 and COL4A2 gene polymorphisms association with susceptibility to disease and severity of CP. Method: Age and sex matched CP patients and healthy controls were enrolled to this study. Two polymorphisms of COL4A1(rs1961495) and COL4A2 (rs9521733) genes were investigated by PCR-RFLP. Gross motor function classification system, medical drug using, type of involvement, number of affected limbs, accompanying conditions (growth retardation, epilepsy, mental retardation, visual and hearing impairment, etc), birth weight, gestational age and MRI data were used to evaluate the disease severity. Genotype distributions and allelic frequencies were compared between the groups by Chi-

square and Cochran-Armitage Trend test. Results: The study population consisted of 176 (75 girls, 101 boys, 71.8u00b1137.9 months) CP and 178 (88 girls, 90 boys 69.3u00b1155.2 months) controls ($p>0.05$). Both groups were in Hardy-Weinberg Equilibrium ($p>0.05$). There was no significant difference between two groups with respect to genotype distribution and allele frequency ($p>0.05$, table 1-2). Only significant association was detected between COL4A2 polymorphism and growth retardation in SP. TT genotype and T allele were higher compared to CC or CT genotypes and C allele (57.1, 38.1, 4.8 %, $p=0.03$ and 76.2, 23.8 %, $p=0.01$, respectively) in CP with growth retardation. Conclusions: These findings suggest that two polymorphisms in the COL4A1 and COL4A2 genes do not increase genetic susceptibility to CP in a group of Turkish Table 1. The genotype distributions of patients and controls, but, rs9521733 polymorphism may be associated with growth retardation.
