Carburants et moteurs. Tome 1 Jean-Claude Guibet, 1997-10-08 Cet ouvrage en deux tomes décrit de façon détaillée, avec le sens critique nécessaire, les réalisations technologiques en service ou en cours de développement pour produire des carburants de haute qualité et les utiliser de façon optimale sur tous les types de moteurs thermiques équipant voitures, camions, avions et navires. Les défis imposés par les objectifs d'agrément et de confort d'utilisation, de protection de l'environnement et de réduction de la consommation d'énergie fossile sont analysés de façon rigoureuse et impartiale, en s'appuyant sur la compétence et l'expérience des chercheurs de l'Institut Français du Pétrole. Tous les types de carburants sont examinés : essences, gazole, gaz de pétrole liquéfiés, gaz naturel, biocarburants, fuels lourds, produits à usages spéciaux, etc. Les situations spécifiques à chaque région du monde (Etats-Unis, Europe, Japon, pays en cours de développement) sont comparées et commentées en fonction des différents contextes énergétiques, technico-économiques et politiques. L'ouvrage se veut ainsi scientifique mais attrayant, exhaustif et solidement structuré, objectif et lucidement engagé : il s'adresse donc à un très large public. Table des matières : Introduction : les transports à l'approche de l'an 2000. 1. Caractéristiques physico-chimiques des carburants. 2. Techniques de raffinage. 3. Essences. 4. Gazole. Bibliographie. Index.

Cutoffs for Dams CIGB ICOLD, 2018-12-07 ICOLD Bulletin 150, Cutoffs for Dams, discusses foundation treatment methods using cutoff-type barriers. High emphasis is given to alluvial deposits throughout this document; however, different materials may require cutoff. The construction of cutoffs has made significant advances mainly through the development of more powerful machinery for drilling and excavation, but also through the introduction of new concepts and techniques, such as jet grouting and deep soil mixing. The following types of cutoffs are presented in this Bulletin: - Diaphragm walls - Vib walls - Pile walls - Superimposed concreted galleries - Jet grouting - Deep mixing These methods are described, and the practical application of each method is illustrated by selected case histories. These case histories also demonstrate how certain difficulties specific to a particular dam site have been dealt with. The performance of cutoffs should be monitored so that their efficiency in reducing flow and piezometric head can be evaluated. Piezometers installed in the foundation upstream and downstream of the cutoff are needed to meet this objective.
