of circular motion the position velocity and acceleration as a special case of two dimensional motion we will see that unlike linear motion where velocity and acceleration are directed along the line of motion in circular motion the direction of velocity is always tangent to the circle

web dynamics of circular motion we know that circular motion can be both uniform and non uniform if the tangential component of acceleration is absent it will be uniform circular motion and if the tangential component of acceleration is present it will be non uniform circular motion [circular motion neet physics notes teachmint](#) - Feb 26 2022 web dec 4 2021 pre medical physics allen illustration 9 at a particle is moving in a circular orbit with a constant tangential acceleration starting from rest after 2 s of the beginning of its motion angle between the acceleration vector and the
