The Colobines Ikki Matsuda, Cyril C. Grueter, Julie A. Teichroeb, 2022-02-24 The Colobines are a group of Afroeurasian monkeys that exhibit extraordinary behavioural and ecological diversity. With long tails and diverse colourations, they are medium-sized primates, mostly arboreal, that are found in many different habitats, from rain forests and mountain forests to mangroves and savannah. Over the last two decades, our understanding of this group of primates has increased dramatically. This volume presents a comprehensive overview of the current research on colobine populations, including the range of biological, ecological, behavioural and societal traits they exhibit. It highlights areas where our knowledge is still lacking, and outlines the current conservation status of colobine populations, exploring the threats to their survival. Bringing together international experts, this volume will aid future conservation efforts and encourage further empirical studies. It will be of interest to researchers and graduate students in primatology, biological anthropology and conservation science. Additional online resources can be found at www.cambridge.org/colobines.

巨熊猫,世纪老传奇活化石动物 2021-02-01 巨熊猫,也被称为大熊猫,是世界上最珍稀的物种之一。它主要分布在中国四川、陕西和甘肃的山区。巨熊猫的寿命可以达到20年以上,但在野外,它们的数量正在迅速减少。据估计,目前全球只剩下约1800只巨熊猫。巨熊猫的食性非常特殊,它们几乎只吃竹子。每天,它们需要花费大量的时间进食,以获取足够的能量来维持生命。巨熊猫的繁殖能力也非常低,它们通常只在每年的春季和秋季进行交配。巨熊猫的幼崽在出生时非常脆弱,需要父母花费大量的时间和精力来照顾它们。巨熊猫的分布范围正在不断扩大,这主要得益于中国政府对大熊猫保护的重视。中国政府已经建立了多个大熊猫自然保护区,并采取了一系列措施来保护巨熊猫的栖息地。此外,中国政府还积极开展大熊猫的科学研究,以提高对巨熊猫的繁殖和生存能力的了解。巨熊猫的保护工作已经取得了显著成效,但仍然存在许多挑战。巨熊猫的栖息地仍然受到人类活动的威胁,巨熊猫的繁殖能力仍然较低。因此,中国政府将继续加大对巨熊猫保护的力度,以确保这一珍稀物种能够继续繁衍下去。..... The giant panda, or the panda, a rare species that first appeared as early as 8 million years ago, has retained its original appearance and kept its physiological habits over the years, becoming the living fossil of animals on the earth today and the relic of primitive organisms. As a rare animal in the world as well as in China, the giant panda is few in number, no more than 2000 with the wild and the captive combined. But giant pandas and their habitats have drawn worldwide attention since they are flagship species to be protected for biodiversity. The giant panda is the logo of the World Wide Fund for Nature (WWF) and the giant panda flag can still be seen fluttering around the world. The giant panda has borne witness to major international sports events like the Asian Games and the Olympic Games as the mascot. The giant

panda habitat in China has been included on the World Heritage List...

Entangled Lives Joy L. K. Pachuau, Willem van Schendel, 2022-11-10 This book considers three questions about understanding the past. How can we rethink human histories by including animals and plants? How can we overcome nationally territorialised narratives? And how can we balance academic history-writing and indigenous understandings of history? This is a tentative foray into the connections between these questions. Entangled Lives explore them for a large area that has seldom been explored in academic inquiry. The 'Eastern Himalayan Triangle' includes both uplands and lowlands. The region is the meeting point of three global biodiversity hotspots connecting India and China across Myanmar/Burma, Bangladesh and Bhutan. The 'Triangle' is treated as a multispecies site in which human histories have always been utterly intertwined with plant and animal histories. It foregrounds that history is co-created – it is always interspecies history – but that its contours are locally specific.

The Hunt for the Golden Mole Richard Girling, 2015-11-10 Taking as its narrative engine the hunt for an animal that is legendarily rare, Richard Girling writes an engaging and highly informative history of humankind's interest in hunting and collecting – what prompts us to do this? what good might come of our need to catalog all the living things of the natural world? Girling, named Environmental Journalist of the Years 2008 and 2009, has here chronicled – through the hunt for the Somali golden mole – the development of the conservation movement, the importance of diversity in the animal kingdom, including humankind within this realm, as well as a hard look at extinction. The Somali mole of the title, first descibed in print in a text book published in 1964, had as sole evidence of its existence only the fragment of a jaw bone found in an owl pellet, a specimen that seemed to have vanished as Girling began his exploration. Intrigued by the elusiveness of this creature and what the hunt for the facts of its existence might tell us about extinction, he was drawn to the dusty vaults of museums of natural history where the most rare artifacts are stored and catalogued, as he found himself caught up in the

need to track it down. Part quest, part travelog, the book that results not only offers an important voice to the scientific debate about extinction and biodiversity it becomes an environmental call to arms.

Ethnoprimateology Michel T. Waller, 2016-07-28 The list of challenges facing nonhuman primates in the 21st century is a long one. The expansion of palm oil plantations to feed a growing consumer class is eating away at ape and monkey habitats in Southeast Asia and Central Africa. Lemurs are hunted for food in the poorest parts of Madagascar while monkeys are used as medicine in Brazil. Traditional cultural beliefs are maintaining demand for animal body parts in West African markets while viral YouTube videos of “cute” and “cuddly” lorises have increased their market value as pets and endangered their populations. These and other issues are addressed in this book by leading researchers in the field of ethnoprimateology, the study of human/nonhuman primate interactions that combines traditional primatological methodologies with cultural anthropology in an effort to better understand the nuances of our economic, ritualistic, and ecologic relationships.

Written by 70 specialists, it features stunning wildlife photography of more than 2000 of the world's most important wild mammals, birds, reptiles, amphibians, and insects. Animal also explains how the earth's biodiversity is in sharp decline and the conservation projects underway to safeguard precious species. For each one, it gives a locator map and statistics, including its conservation status. For anyone who wants a reliable and enthralling reference, in which you can find the answers to everything - from why zebras are striped or how the sunbear got its name - Animal is your essential one-stop guide.

UNEP Year Book 2011, 2011 The 8th Edition of the UN Environment Programme flagship report, The UNEP Year Book 2011, examines global emerging issues and provides the latest environmental science. It also highlights major environmental events and developments over the past year, and presents the most recent data and indicator trends. The ocean has become a global repository for much of the waste we produce. Scientists are concerned that plastic debris in the ocean can transport toxic substances which may end up in the food chain, causing potential harm to ecosystems and human health. The Year Book also explores the wider implications of the use of phosphorus in food production. Phosphorus is an essential nutrient whose supply is limited. Since demand for fertilizer in agriculture rocketed in the 20th century, large amounts of phosphorus are flowing into the environment. New perspectives are also emerging on how biodiversity conservation can be integrated in forest management. Forests are receiving increasing attention, not least because of their role in climate change mitigation. Halting loss of forest biodiversity is essential if forests are to adapt to mounting pressures, including climate change and pest outbreaks. The Year Book's overview of events and developments during 2010 shows how cutting edge science reveals new opportunities to mitigate climate change while improving air quality. Stimulated by technological innovation and green investments, renewable energy supply is growing rapidly. This and other developments are summarized in key environmental indicators that present the latest data and trends For The global environment.

Socioecosystems Patrick Giraudoux, 2022-06-16 The idea of socioecosystems answers the growing need to understand, in the context of the Anthropocene, how adaptive processes interact, and how that interplay results in the coevolution of living beings. Studying socioecosystems means taking into account the diversity of temporal and physical scales in order to grasp how ecological, social and economic forces are interwoven. Based on these drivers, the complex dynamics that determine the habitability of the Earth emerge. This book analyzes, through concrete cases from regional socioecosystems on several continents, how research action has provided answers to problems related to agriculture, health and the conservation of biodiversity. It demonstrates that these undertakings could not have succeeded without the combined efforts of the communities of living beings and objects, the community of knowledge and the communities of action. These examples are accompanied by a reflection on the conditions that make it possible to bring this research to completion.
