Using material from the White Star line archives, the extensive holdings of the Merseyside Maritime Museum, new illustrations and a variety of historical sources, Scarth unearths the full back story of key characters and companies: many of her key officers and crew were either from Liverpool or had strong links with the port, the ship's owners were based in the City, many of the most colourful tales emerging from the disaster relate to Liverpool people and here, where appropriate, we find out what happened to them after the sinking. Titanic and Liverpool will be compulsory reading for anyone interested in the Titanic and also for anyone hoping to understand Liverpool's role as the great processing port of Europe and gateway to the US and Canada.

**Titanic** Art Braunschweiger, 2008 While everyone knows the new White Star liner was the most glamorous and was full of millionaires when she sank, few appreciate just how luxurious she was. Even in Third Class, the accommodation was better than on First Class on many older ships. For the first time, Bruce Beveridge, Steve Hall and Scott Andrews look at the ship itself, and at her interior design and fittings. From cobalt blue Spode china and Elkington plate silverware in the a la carte restaurant to the design of the boilers and fixtures and fittings onboard the world's most luxurious vessel, they tell the story of a liner built at the peak of the race between the British, French and Germans to build bigger and better ships. --from publisher description.

**Engineering Ethics** William Richard Bowen, 2008-11-27 Around the turn of the millennium, a young woman with outstanding academic achievements in science and mathematics applied to study engineering at a European university. She had chosen to study engineering particularly because of the opportunities she expected it would give her to make a contribution to the well- ing of others. It happened that the university engineering department to which she applied had just been involved in the design of a vehicle for a world speed record attempt. When the young woman visited the university for interview this "triumph of technology" was presented as being a quintessential example of good engine- ing. However, though it was clear to her that the vehicle was technically ing- ious, she also recognised that it was of no practical use. She concluded that she had misunderstood the nature of engineering, and still wishing to help others she changed her plans and studied medicine, at which she assuredly excelled. This young woman's change of career was undoubtedly a specific loss for en- neering. Additionally, it had a broader, tragic dimension; for her understanding of the purpose of engineering was more mature than that of the academics she - countered. Moreover, their imbalanced prioritisation of technical ingenuity over helping people is not uncommon within parts of the profession.
