Whether you're an animator, painter, photographer or illustrator, you need to know how to harness light in your work to create the right effect. *Light for Visual Artists* is the first and only book that explores the way light can be used to create realistic and fantastical effects in a wide range of media. Illustrator Richard Yot, known for his work in film as a lighting artist and stylised 3D illustrations, takes you through the fundamental properties of natural and artificial light, shadows, the interaction of light on different types of surfaces, reflections, as well as transparency, translucency and the effects of light on colour. Richard also explores how to observe the effects of light to create realistic images, and the creative use of light in composition and design for creating moods or setting a scene. This second edition has been updated with revised photos and artwork, as well as 15 practical exercises and new online video material. Packed with diagrams and illustrations, as well as computer game and film stills, *Light for Visual Artists* is an invaluable resource for animators, digital illustrators, painters, photographers and artists working in any medium.

**Light for the Artist** Ted Seth Jacobs,2014-02-19 Intermediate and advanced art students receive a broad vocabulary of effects with this in-depth study of light. Topics include basics, use of light to define form and space, field effects, colored light, and many other subjects. Diagrams and paintings illustrate applications of principles to figure, still life, and landscape paintings--

*Light Science* Thomas Rossing,Christopher J Chiaverina,1999-09-24 Intended for students in the visual arts and for others with an interest in art, but with no prior knowledge of physics, this book presents the science behind what and how we see. The approach emphasises phenomena rather than mathematical theories and the joy of discovery rather than the drudgery of derivations. The text includes numerous problems, and suggestions for simple experiments, and also considers such questions as why the sky is blue, how mirrors and prisms affect the colour of light, how compact disks work, and what visual illusions can tell us about the nature of perception. It goes on to discuss such topics as the optics of the eye and camera, the different sources of light, photography and holography, colour in printing and painting, as well as computer imaging and processing.
