

How Big Are They

David Antin

How Big is It? Ben Hillman, 2007 Interesting facts about some of the world's biggest things.

How Big is Big and How Small is Small Timothy Paul Smith, 2013-10-24 This book is about how big is the universe and how small are quarks, and what are the sizes of dozens of things between these two extremes. It describes the sizes of atoms and planets, quarks and galaxies, cells and sequoias. It is a romp through forty-five orders of magnitude from the smallest sub-nuclear particles we have measured, to the edge of the observed universe. It also looks at time, from the epic age of the cosmos to the fleeting lifetimes of ethereal particles. It is a narrative that trips its way from stellar magnitudes to the clocks on GPS satellites, from the nearly logarithmic scales of a piano keyboard through a system of numbers invented by Archimedes and on to the measurement of the size of an atom. Why do some things happen at certain scales? Why are cells a hundred thousandths of a meter across? Why are stars never smaller than about 100 million meters in diameter? Why are trees limited to about 120 meters in height? Why are planets spherical, but asteroids not? Often the size of an object is determined by something simple but quite unexpected. The size of a cell and a star depend in part on the ratio of surface area to volume. The divide between the size of a spherical planet and an irregular asteroid is the balance point between the gravitational forces and the chemical forces in nature. Most importantly, with a very few basic principles, it all makes sense. The world really is a most reasonable place.

Go-To Telescopes Under Suburban Skies Neale Monks, 2010-09-14 Go-To Telescopes Under Suburban Skies is the first book specifically written for amateur astronomers who own, or who are about to purchase, a computer-controlled 'go-to' telescope. The advantage of the 'go-to' capability is enormous - the telescope can be aimed at any object in the sky with great speed and accuracy - which is why these instruments are so popular. Making the realistic assumption that the observer is using a relatively small telescope and is observing from a backyard in a suburban area, this book provides literally hundreds more targets beyond those offered by the built-in 'nightly tours' that feature on the telescope's computer tours. And instead of wasting many pages on maps and coordinates, it leads the computer to locate the targets, and so has room to suggest many more fascinating deep-sky objects and provide detailed observing lists and information about what's being viewed.

Kidstery Steven Schneiderman, 2016-02-18 *Kidstery* By Steven S. Schneiderman *Kidstery* is the delightfully illustrated adventure of Madison (Maddy) and Justin. The two pre-teens have adventures at the zoo, while fishing, and with beginner

sports. They are confronted with problems that require logical solutions. They are also confronted with contemporary issues and exposed to philosophical differences. Readers will come to see that what is the daily norm for some is also a source of wonderment for others. As Maddy and Justin learn, understanding does not always come in an instant. Sometimes comprehension requires reflection.

How Long? How Long? Belinda Robnett, 1997 Robnett examines the differences among women participants in the movement and offers the first cohesive analysis of the gendered relations and interactions among its black activists, thus demonstrating that femaleness and blackness cannot be viewed as sufficient signifiers for movement experience and individual identity.

How Long Is the Present David Antin, 2014-12-01 Poet, performance artist, and critic David Antin invented the “talk poem.” He insists that his poems be oral and created in front of a live audience, in a specific time and place, with the transcription of the performance adjusted for print by presenting it not in prose but in clumps of words without justified margins or punctuation, peppered with white spaces that indicate pauses. In this book, editor Stephen Fredman provides a critical introduction to a selection of talk poems from three out-of-print collections, accompanied by a new interview with the author. As Fredman points out, Antin’s work is a form of conceptual writing that has influenced generations of experimental poets and prose writers. His profound and humorous talk poems are essential for classroom and scholarly discussions of the arts in modernism and postmodernism—offering as well an invitation to strengthen the ties between the sciences and the humanities.

Sizing Up Measurement Chris Confer, 2007 The lessons in *Sizing Up Measurement: Activities for Grades 3-5* Classrooms focus on length, area, volume, angles, weight, time, and temperature. Each lesson is organized in an accessible, easy-to-use format that includes an overview, a list of materials, a vocabulary list, and step-by-step teaching directions. Students come away from these lessons with a deeper understanding of why and how to measure, and they develop the confidence required to make sense of any situation and the measurement tools involved.--pub. desc.

Pursuit of Liberation Emily A. Nemeth, Ashley N. Patterson, 2022-04-01 The authors of this volume collectively demonstrate the importance of critical service-learning in this historic moment as we participate in, and witness ongoing struggles for justice around the world. The contributors of this volume offer guidance to educators and scholars alike who are interested in designing, participating in, and studying the potential of alliances formed through critical service-learning. The volume emphasizes theoretical and historical foundations of critical service-learning, pressing questions facing the field, exploration of outcomes of, and ongoing challenges for the pedagogy, and design features and larger scale models of critical service-learning that can be implemented across the educational landscape of elementary, secondary, and higher education. ENDORSEMENTS: This volume in the Advances in Service-Learning Research series does not disappoint. Emily Nemeth and Ashley Patterson have amassed an amazing team of authors who take readers on a rewarding journey across diverse cultural communities and educational contexts, revealing the limitations of traditional service-learning approaches in addressing issues of racial injustice. Readers of this volume will gain a greater understanding of the rapidly evolving and maturing nature of higher education service-learning pedagogy and the need to adopt more critical perspectives in the study and practice of service-learning. — Andrew Furco, University of Minnesota Pursuit of Liberation, conceived and written during tumultuous times in the United States, offers hope for the possibility of social justice and liberation in educational spaces. The modern-day brutal lynching of George Floyd, an African American man by a white police officer, and the COVID-19 pandemic revealed the horridness and inhumanity of a country that advertises itself as a beacon of equity and inclusion. This volume is a reminder that social justice and liberation require vigilance. The editors, Professors Nemeth and Patterson,

persuade us to understand that the work of inclusion and liberation in education is complex, multidisciplinary, continuous, and iterative. Most importantly, they convincingly assert that communities and educational institutions need to take bold steps toward a more just, hopeful, and loving world through critical service learning. — Shirley Mthethwa-Sommers, University of Mpumalanga

Mindset Mathematics Jo Boaler, Jen Munson, Cathy Williams, 2018-02-28 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the fifth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual mathematics tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

Darkness Under the Sun (Novella) Dean Koontz, 2010-10-25 The chilling account of a pivotal encounter between innocence and ultimate malice, *Darkness Under the Sun* is the perfect read for Halloween—or for any haunted night—and reveals a secret, fateful turning point in the career of Alton Turner Blackwood, the killer at the dark heart of *What the Night Knows*, the forthcoming novel by #1 New York Times bestselling author Dean Koontz. There once was a killer who knew the night, its secrets and rhythms. How to hide within its shadows. When to hunt. He roamed from town to town, city to city, choosing his prey for their beauty and innocence. His cruelties were infinite, his humanity long since forfeit. But still . . . he had not yet discovered how to make his special mark among monsters, how to come fully alive as Death. This is the story of how he learned those things, and of what we might do to ensure that he does not visit us.
