What are the differences between a factor and a vector in R? Dec 6, 2022 · A factor is a very specific type of vector that is an odd mix of numeric and character, which at first glance seems like a character, but under the hood is actually numeric. The character aspect are the labels that are attached to each value. Thus, it is a categorical variable with a limited number of categories. *How do I convert certain columns of a data frame to become ...* May 10, 2018 · Using a factor will require that all values are mapped to IDs behind the scenes, so any print of your data.frame requires a lookup on those levels -- an extra step which takes time. Factors are great when storing strings which you don't want to store repeatedly, but would rather reference by their ID. *How to force R to use a specified factor level as reference in a ...* You should do the data processing step outside of the model formula/fitting. When creating the factor from b you can specify the ordering of the levels using `factor(b, levels = c(3,1,2,4,5))`. Do this in a data processing step outside the `lm()` call though. My answer below uses the `relevel()` function so you can create a factor and then shift the reference level around to suit as you ... r - summarizing counts of a factor with dplyr - Stack Overflow Sep 12, 2014 · I want to group a data frame by a column (owner) and output a new data frame that has counts of each type of a factor at each observation. The real data frame is fairly large, and there are 10 diff... How to reorder factor levels in a tidy way? - Stack Overflow Jul 17, 2017 · A couple comments: reordering a factor is modifying a data column. The dplyr command to modify a data column is mutate. All arrange does is re-order rows, this has no effect on the levels of the factor and hence no effect on the order of a legend or axis in ggplot. All factors have an order for their levels. The difference between an ordered = TRUE factor and a regular ... **Why use as.factor () instead of just factor () - Stack Overflow** Expanded answer two years later, including the following: What does the manual say? Performance: `as.factor` > `factor` when input is a factor Performance: `as.factor` > `factor` when input is integer Unused levels or NA levels Caution when using R's group-by functions: watch for unused or NA levels *r - Re-ordering factor levels in data frame - Stack Overflow* Aug 24, 2013 · Re-ordering factor levels in data frame [duplicate] Asked 12 years ago Modified 3 years, 11 months ago Viewed 250k times r - ggplot2: Reorder items in a legend - Stack Overflow Oct 12, 2021 · (2) I cannot find a question about ordering (of axis or legend elements) in ggplot2 that is not completely resolved by the use of `factor(.,`

levels=). When you define the factor and specify the ordering of said factors using levels=, then ggplot2 tends to honor that specification. **r - Changing factor levels with dplyr mutate - Stack Overflow** Jan 28, 2015 · 19 From my understanding, the currently accepted answer only changes the order of the factor levels, not the actual labels (i.e., how the levels of the factor are called).
