Advanced Technologies for the Quality Control and Standardization of Plant Based Medicines Jiang Xu, Caroline

Howard, 2020-06-18 Herbs and herbal products are of paramount importance for human health. To be able to guarantee safety and quality, standards and testing methods are needed. Pharmacopoeias contain quality control protocols setting the standards which are then required by governments. The quality traits are many, including the intrinsic variables of medicinal plant, e.g. the levels of the active compounds, and the absence of possibly naturally occurring toxic compounds. On the other hand, many quality traits are related to agricultural conditions and practices, or to the harvesting and post-harvest processing. With so many variables, quality control of the end product becomes extremely complex, time consuming and costly. To ensure the quality of medicinal plants for human consumption quality management -the use of "good practices" at each step, from seed to final product- becomes a crucial aspect. In general, quality control includes the inspection of the product's identity, purity, and content, based on its physical, chemical or biological properties. To ensure the quality of herbal medications, criteria such as botanical quality, type of preparation, physical constants, adulteration, contaminants, chemical constituents, pesticides residues et al. should be examined. Meanwhile, authentication of herbs is needed to avoid possible adulteration or contaminating plants, even toxic herbs such as *Aristolochia* species. Many of the methods are long standing, such as microscopy in combination with color reactions, but some 50 years ago chromatography developed as a major tool for both qualitative and quantitative analysis of herbal preparations. Nowadays, research is working on the improvement of these methods and on the development of novel tools. For instance, next generation sequencing and mass spectrometry imaging, are emerging as new technologies for the quality control of herbal medicines. With these technologies, quick testing of herbal products and of mixed herbal powder preparations, including the testing for specific plant parts (botanical drugs), can be achieved. Also, novel chemical tools such as metabolomics and Near Infrared Red (NIR) spectroscopy are being developed as powerful tools to identify and to link these with activity by using chemometric tools such as multivariate analysis. Finally, progress of informatic tools such as machine learning helps to deal with the big data generated by sequencing or mass spectrometry. However, these new technologies, like all other new born technologies, should be tested and perfected for a broad range of products.

African Plant-Based Products as a Source of Potent Drugs to Overcome Cancers and their Chemoresistance ,2024-06-18
African Plant-Based Products as a Source of Potent Drugs to Overcome Cancers and their Chemoresistance: Part One: Cancer Chemoresistance, Screening, Methods, and the Updated cut-off Points for the Classification of Natural Cytotoxic Products, Volume 111 offers an overview of the potential of African medicinal plants as a source of anticancer agents to overcome with an emphasis on cancer drug resistance. Based on the collected data, the book also offers a rational classification basis for the cytotoxic activity of natural products. The general knowledge of state-of-the-art of cancer drug resistance globally and the screening methods for cytotoxic agents are described. This book clearly identifies the best African medicinal plants that could be useful for the development of efficient herbal drugs, as well as the best phytochemicals that could be explored as potential pharmaceuticals to efficiently tackle cancers and their refractory phenotypes. The book appears a unique tool for Scientists for anticancer drug discovery from the exceptional flora of Africa. - Provides the first of its type reference to focus on the potential of African plants as an alternative medicine to tackle cancers and their recalcitrant phenotypes - Analyzes the recorded data to propose a rational basis for the classification of naturally occurring cytotoxic agents - Clearly identifies and discusses plants and phytochemicals that could be useful in the development of new cytotoxic drugs to overcome cancer and cancer drug resistance

Handbook of Research on Advanced Phytochemicals and Plant-Based Drug Discovery Singh, Ajeet, 2022-06-24 A great deal of interest has been generated recently in the isolation, characterization, and biological activity of phytochemicals. Phytochemicals have the potential to enhance pharmaceuticals and drug discovery. As such, there is an urgent need for current research in the global scope of phytochemicals including the chemical and physical characteristics, analytical procedures, biological activity, safety, and industrial applications. The Handbook of Research on Advanced Phytochemicals and Plant-Based Drug Discovery examines the applications of bioactive molecules from a health perspective, examining the pharmacological aspects of medicinal plants, the phytochemical and biological activities of different natural products, and ethnobotany and medicinal properties. Moreover, it presents a novel dietary approach for human disease management. Covering topics such as computer-aided drug design, government regulation, and medicinal plant taxonomy, this major reference work is beneficial to pharmacists, medical practitioners, phytologists, hospital administrators, government officials, faculty and students of higher education, librarians, researchers, and academicians.

Chicago Gardens Cathy Jean Maloney, 2008-09-01 Once maligned as a swampy outpost, the fledgling city of Chicago brazenly adopted the motto *Urbs in Horto* or City in a Garden, in 1837. Chicago Gardens shows how this upstart town earned its sobriquet over the next century, from the first vegetable plots at Fort Dearborn to innovative garden designs at the 1933 World's Fair. Cathy Jean Maloney has spent decades researching the city's horticultural heritage, and here she reveals the unusual history of Chicago's first gardens. Challenged by the region's clay soil, harsh winters, and fierce winds, Chicago's pioneering horticulturalists, Maloney demonstrates, found imaginative uses for hardy prairie plants. This same creative spirit thrived in the city's local fruit and vegetable markets, encouraging the growth of what would become the nation's produce hub. The vast plains that surrounded Chicago, meanwhile, inspired early landscape architects, such as Frederick Law Olmsted, Jens Jensen, and O.C. Simonds, to new heights of grandeur. Maloney does not forget the backyard gardeners: immigrants who cultivated treasured seeds and pioneers who planted native wildflowers. Maloney's vibrant depictions of Chicagoans like "Bouquet Mary," a flower peddler who built a greenhouse empire, add charming anecdotal evidence to her argument—that Chicago's garden history rivals that of New York or London and ensures its status as a world-class capital of horticultural innovation. With exquisite archival photographs, prints, and postcards, as well as field guide descriptions of living legacy gardens for today's visitors, Chicago Gardens will delight green-thumbs from all parts of the world.

Medicine, Trade and Empire Palmira Fontes da Costa, 2016-03-03 Garcia de Orta's Colloquies on the Simples and Drugs of India (1563) was one of the first books to take advantage of the close relationship between medicine, trade and empire in

the early modern period. The book was printed in Goa, the capital of the Portuguese empire in the East, and the city where the author, a Portuguese physician of Jewish ancestry, lived for almost thirty years. It presents a vast array of medical information on various drugs, spices, plants, fruits and minerals native to India or adjoining territories. In addition, it includes information concerning indigenous methods of healing as well as a far-reaching assessment of ancient and modern authors on Asian materia medica. Orta's book had a market in Asia but was particularly valuable to a European audience. It soon attracted the attention of various European authors and printers by providing the basis for adaptations, commentaries and editions in various languages, prompting a successful and complex trail of medical knowledge in transit. Authored by an interdisciplinary team of prominent international scholars, the volume takes into account recent historiographical trends and provides a contextualized and innovative analysis of the histories and reception of the Colloquies. It emphasizes the value of the work to historians today as a symbol of the impact of geographical expansion and globalization in a sixteenth-century medical world.

Bio-based Solutions for Sustainable Development of Agriculture, Volume II Eduardo V. Soares, Helena M. V. M. Soares, Spyridon Alexandros Petropoulos, 2024-11-26 The agricultural industry is primarily driven by the fast growth of the population and the subsequent need to supply sufficient food globally. It is estimated that the global population will expand from 8 billion to about 9 billion in 2050 and crop production needs to double in order to supply enough food for all people by 2050. Moreover, the climate change and the intensification of areas of infertile and unproductive soil create new and additional difficulties. It is urgent and of utter importance to find alternative practices to the traditional ones (based on the indiscriminate use of various synthetic chemicals, e.g. fertilizers and pesticides), which are mainly used nowadays, to overcome current and future agricultural challenges in a natural, more efficient and sustainable way. Recent regulations (EU 1009/2019 and Farm Bill in EU and USA, respectively) promote the adoption of biostimulants in agriculture and open the market for new and innovative solutions. This regulation is a major step forward that should encourage the scientific community, in strict interaction with the industry, in the continuous development of new bio-based solutions for modern agriculture.
