The differential has a linear approximation meaning. Basically, it denotes the change in the function. If it's a scalar value function, the change would be scalar, and thus the differential (would map to a scalar). If the domain is matrices, then the Jacobian is a matrix (a non-linear map from matrices to matrices). **calculus - What is the practical difference between a differential ...** See this answer in Quora: What is the difference between derivative and differential?. In simple words, the rate of change of function is called as a derivative and differential is the actual change of function. We can also define a derivative in terms of differentials as the ratio of differentials of function by the differential of a variable. *What exactly is a differential? - Mathematics Stack Exchange* Jul 13, 2015 · The right question is not "What is a differential?" but "How do differentials behave?". Let me explain this by way of an analogy. Suppose I teach you all the rules for adding and multiplying rational numbers. Then you ask me "But what are the rational numbers?" The answer is: They are anything that obeys those rules.
