*Managing user interface state | Apple Developer Documentation* Provide the data as read-only through a Swift property, or create a two-way connection to the state with a binding. SwiftUI watches for changes in the data, and updates any affected views as needed. Don't use state properties for persistent storage because the life cycle of state variables mirrors the view life cycle. **Managing model data in your app | Apple Developer Documentation** This default behavior assumes that a view in the current hierarchy previously stored a non-optional instance of the type using the `environment(_:)` modifier. If a view attempts to retrieve an object using its type and that object isn't in the environment, SwiftUI throws exception. [View configuration | Apple Developer Documentation](#) Adjust the characteristics of views in a hierarchy. Overview SwiftUI enables you to tune the appearance and behavior of views using view modifiers. Many modifiers apply to specific kinds of views or behaviors, but some apply more generally. For example, you can conditionally hide any view by dynamically setting its opacity, display contextual help when people hover over a view, ... **Configuring views | Apple Developer Documentation** In SwiftUI, you assemble views into a hierarchy that describes your app's user interface. To help you customize the appearance and behavior of your app's views, you use view modifiers. *init(\_:) | Apple Developer Documentation* SwiftUI automatically updates any parts of `MyView` that depend on the property when the associated environment value changes. You can't modify the environment value using a property like this. Instead, use the `environment(_:_:)` view modifier on a view to set a ... **environment(\_:\_:) | Apple Developer Documentation** It has no effect outside the view hierarchy on which you call it. The environment of a given view hierarchy holds only one observable object of a given type. Note This modifier takes an object that conforms to the Observable protocol. To add environment objects that conform to the `ObservableObject` protocol, use `environmentObject(_:)` instead. *Specifying the view hierarchy of an app using a scene — SwiftUI ...* This sample uses a journaling app as an example. To describe the view hierarchy of the app's user interface, the `MyApp` structure declares a scene and its contents. Let's take a look at the structure and its scene. **Environment | Apple Developer Documentation** This default behavior assumes that a view in the current hierarchy previously stored a non-optional instance of the type using the `environment(_:)` modifier. If a view attempts to retrieve an object using its type and that object isn't in the environment, SwiftUI throws an exception. *View fundamentals | Apple Developer Documentation* Compose a custom view by combining built-in views that SwiftUI provides with other custom views that you create in your view's body computed property.

Configure views using the view modifiers that SwiftUI provides, or by defining your own view modifiers using the `ViewModifier` protocol and the `modifier(_:)` method. **EnvironmentValues | Apple Developer Documentation** The value that you set affects the environment for the view that you modify — including its descendants in the view hierarchy — but only up to the point where you apply a different environment modifier. SwiftUI provides dedicated view modifiers for setting some values, which typically makes your code easier to read. **Environment values | Apple Developer Documentation** API Collection Environment values Share data throughout a view hierarchy using the environment. Overview Views in SwiftUI can react to configuration information that they read from the environment using an `Environment` property wrapper. **environment (\_:\_) | Apple Developer Documentation** Prefer the dedicated modifier when available, and offer your own when defining custom environment values, as described in `Entry()`. This modifier affects the given view, as well as that view's descendant views. It has no effect outside the view hierarchy on which you call it.
