Upper Gastrointestinal Bleeding, An issue of Gastroenterology Clinics of North America Ian M. Gralnek, 2014-11-07 This issue of *Gastroenterology Clinics of North America* is all about acute upper GI bleeding and is divided into two distinct sections: section I is devoted to nonvariceal upper GI bleeding and section II is devoted to variceal upper GI bleeding. Acute nonvariceal upper GI bleeding may originate from the esophagus, stomach, or duodenum, essentially anywhere proximal to the Ligament of Treitz. In Section I, Dr Gianluca Rotondano, Hospital Maresca, Torre del Greco, Italy, begins with a review of the epidemiology and diagnosis of acute nonvariceal upper GI bleeding. We then turn to patient presentation, risk stratification, and how to initially medically manage these bleeding patients. I am pleased to have one of our emergency medicine colleagues, Dr Andrew Meltzer, Department of Emergency Medicine, George Washington University, contribute this important article and provide a unique viewpoint from the emergency department where most of these patients initially present. As we all know, endoscopic hemostasis is the accepted standard of care for patients with acute nonvariceal upper GI bleeding. Moreover, peptic ulcer bleeding is the most common nonvariceal cause of acute upper GI bleeding; thus, Drs Yidan

Lu, Yen-I Chen, and Alan Barkun from McGill University, Montreal, Canada, provide an in-depth review of the endoscopic management of peptic ulcer bleeding. Drs Eric Tjwa, I. Lisanne Holster, and Ernst Kuipers from the Erasmus Medical Center University Hospital, Rotterdam, The Netherlands, review the endoscopic management of all other causes of acute nonvariceal upper GI bleeding, and in addition, Drs Louis Wong Kee Song and Michael Levy from the Mayo Clinic, Rochester, Minnesota discuss emerging endoscopic hemostasis treatments, such as topical sprays and over-the-scope clipping devices. Although endoscopic hemostasis is very highly effective, there are unfortunately cases where bleeding is unable to be controlled or when significant rebleeding occurs that is not amenable to endoscopic therapy. Therefore, I have included two articles that provide insight into the question...what if endoscopic hemostasis fails? The first article, written by Drs Philip Wai Yan Chiu and James Yun Wong Lau, from Prince of Wales Hospital, The Chinese University of Hong Kong, focuses on tried and true surgical treatment options. The second article, by Dr Sujal Nanavati, University of California at San Francisco, Department of Radiology and Biomedical Imaging, addresses the alternative treatment strategy of angiographic embolization, which has now emerged as the often preferred salvage treatment strategy.

Everyday Miracles Dr. Richard Burt, 2023-01-10 A life-changing treatment is conquering auto-immune disorders—why doesn't anyone know about it? Thirty-five years ago, Dr. Richard Burt began a journey to treat chronic autoimmune diseases as they'd never been treated before. Using a treatment originally developed for leukemia but modified to be more gentle—a one-time combination of immune targeting drugs followed by a transplant of the patient's blood stem cells—he has documented the successful and often dramatic reversal of multiple sclerosis, systemic sclerosis (scleroderma), chronic inflammatory demyelinating polyradiculoneuropathy (CIPD), neuromyelitis optica, and Crohn's disease. After decades of study and randomized trials, his approach, which has been duplicated in other parts of the world, is finally being recognized as an effective means of reversing these “incurable” diseases. Some of his patients have been symptom-free for more than twenty years, and in this book Dr. Burt tells their stories alongside his own journey of developing and refining the treatment, known as hematopoietic stem cell transplant (HSCT) for autoimmune disorders. “These patients are the heroes,” Dr. Burt has said. “Their bodies and spirits faced unrelenting disease, and yet they fight valiantly against the suffering and obstacles.”

What is HSCT? How does it work? What are the risks? Why aren't more doctors talking about it? And why is it still out of reach for so many patients who could benefit from it? Dr. Burt answers these questions and many more. Written for the layperson, *Everyday Miracles* grants patients with autoimmune diseases and the people who love them insights into the revolutionary approach that could convert their life sentence into a one-time reversible illness.

The book ends with a chapter of 50 questions, which again matches the proportions of topic areas found in the ESEGH, and is designed to act as a mock-examination for use in the final stages of preparation.
