The Annotated Build-It-Yourself Science Laboratory Windell Oskay, Raymond Barrett, 2015-04-30 Raymond E. Barrett's Build-It-Yourself Science Laboratory is a classic book that took on an audacious task: to show young readers in the 1960s how to build a complete working science lab for chemistry, biology, and physics--and how to perform experiments with those tools. The experiments in this book are fearless and bold by today's standards--any number of the experiments might never be mentioned in a modern book for young readers! Yet, many from previous generations fondly remember how we as a society used to embrace scientific learning. This new version of Barrett's book has been updated for today's world with annotations and updates from Windell Oskay of Evil Mad Scientist Laboratories, including extensive notes about modern safety practices, suggestions on where to find the parts you need, and tips for building upon Barrett's ideas with modern technology. With this book, you'll be ready to take on your own scientific explorations at school, work, or home.

A Short History of the Art of Distillation from the Beginnings up to the Death of Cellier Blumenthal R. J. Forbes, 2024-01-22 Distillation is an art. And even an ancient one. It is strange to find that the history of this oldest and still most important method of producing chemically pure substances has ever been written. The reader looking at the bibliography appended to this book might object that many data existed. This may be true but the proper history of the art from the origin up to the present time was lacking.

Solar Energy in Developing Countries A. Eggers-Lura,2013-10-22 Solar Energy in Developing Countries is a documentation report with bibliography on solar energy research and development in developing countries such as those in Asia, Central and South America, Africa, and Middle East. Institutions in developed countries with solar activities of interest to developing countries are included. This volume consists of seven chapters and opens with an overview of the study followed by a discussion on solar activities of relevance to developing countries, focusing on the work of international or supranational organizations such as the United Nations, NATO, and the European Economic Community. The following chapters deal with the state of the art of solar energy applications as well as solar R&D work in developing countries, including solar distillation, solar cooking and drying, and solar refrigeration and air conditioning. Information and addresses on sources of literature, hardware and equipment are also provided, along with a detailed and comprehensive bibliography (mostly with abstracts). This book is intended for solar scientists and engineers, government officials, and others who are interested in solar R&D work in developing countries.
