Talent Management: Einem Führungskräftemangel mit zielgerichtetem Personalmanagement vorbeugen Jan Winkler, 2009-06 Die drohenden Konsequenzen des demographischen Wandels erfordern, dass Unternehmen Strategien und Prozesse entwickeln müssen, mit denen sie langfristig ihre Versorgung mit qualifizierten Arbeitnehmern zur Besetzung ihrer Schlüsselpositionen sicherstellen. Ein aktuell medienpräsender Lösungsweg hierfür lautet Talent Management. Doch was genau verbirgt sich hinter diesem Zauberwort, das momentan in aller Munde ist? Und welche weiteren Gründe legitimieren, dass sich ein Unternehmen diesem Thema widmen sollte? Das vorliegende Buch stellt den in vielfältiger Form existierenden Begriffserklärungen zu Talent Management eine allgemeingültige Definition entgegen, die sich auf die gemeinsamen Grundgedanken der verschiedenen Ansätze beruft. Darüber hinaus werden die in der Literatur vielfach genannten, aber noch unstrukturierten Gründe für den Bedeutungsgewinn von Talent Management (insbesondere für die Finanzdienstleistungsbranche) mittels eines Modells geordnet wiedergegeben. Dabei wird nach den Ursachen unterschieden, die innerhalb der Unternehmen selbst bzw. in ihrer Branchenumwelt und in ihrer Makroumwelt vorzufinden sind. Doch auch wenn Unternehmen von der Wichtigkeit des Themas überzeugt werden konnten und eigene Konzepte initiieren möchten,

stehen sie vor dem komplexen Bewältigungsproblem der Erstellung effektiver und effizienter Talentprogramme. Wie ist bei der Planung vorzugehen und was ist bei der Ausgestaltung der Konzepte zu beachten? Auch bei der Beantwortung dieser Fragen versucht das vorliegende Werk Hilfestellungen zu geben. So wurde ein Strukturschema für Talent Management-Konzepte entwickelt, dass von Unternehmen als eine Orientierungshilfe im Planungsprozess herangezogen werden kann. Geordnet nach den einzelnen Konzeptelementen werden daraufhin die in der Literatur vorzufindenden allgemeinen Gestaltungsempfehlungen zusammengetragen. Zusätzlich können sich Unternehmen durch diese Publikation weitere Anregungen bei mögliche Ausgestaltungsformen praxisnahe

The Sedated Society James Davies, 2017-01-23 This edited volume provides an answer to a rising public health concern: what drives the over prescription of psychiatric medication epidemic? Over 15% of the UK public takes a psychiatric medication on any given day, and the numbers are only set to increase. Placing this figure alongside the emerging clinical and scientific data revealing their poor outcomes and the harms these medications often cause, their commercial success cannot be explained by their therapeutic efficacy. Chapters from an interdisciplinary team of global experts in critical psychopharmacology rigorously examine how pharmaceutical sponsorship and marketing, diagnostic inflation, the manipulation and burying of negative clinical trials, lax medication regulation, and neoliberal public health policies have all been implicated in ever-rising psycho-pharmaceutical consumption. This volume will ignite a long-overdue public debate. It will be of interest to professionals in the field of mental health and researchers ranging from sociology of health, to medical anthropology and the political economy of health.

Rethinking Human Evolution Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology. The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology, with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry. We might wonder why we should

pursue new inquiries if we already know the story. Is paleoanthropology an evolutionary science? Are analyses of human evolution biological? In this volume, contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology. All of the contributors reflect on their own research and its disciplinary context, considering how their fields of inquiry can move forward in new ways. The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution. Topics discussed include paleoanthropology's history of procedural idiosyncrasies; the role of mind and society in our evolutionary past; humans as large mammals rather than a special case; genomic analyses; computational approaches to phylogenetic reconstruction; descriptive morphology versus morphometrics; and integrating insights from archaeology into the interpretation of human fossils. An Introduction to R for Spatial Analysis and Mapping Chris Brunsdon, Lex Comber, 2014-04-30 In an age of big data, data

journalism and with a wealth of quantitative information around us, it is not enough for students to be taught only 100 year old statistical methods using 'out of the box' software. They need to have 21st-century analytical skills too. This is an excellent and student-friendly text from two of the world leaders in the teaching and development of spatial analysis. It shows clearly why the open source software R is not just an alternative to commercial GIS, it may actually be the better choice for mapping, analysis and for replicable research. Providing practical tips as well as fully working code, this is a practical 'how to' guide ideal for undergraduates as well as those using R for the first time. It will be required reading on my own courses. - Richard Harris, Professor of Quantitative Social Science, University of Bristol R is a powerful open source computing tool that supports geographical analysis and mapping for the many geography and 'non-geography' students and researchers interested in spatial analysis and mapping. This book provides an introduction to the use of R for spatial statistical analysis, geocomputation and the analysis of geographical information for researchers collecting and using data with location attached, largely through increased GPS functionality. Brunsdon and Comber take readers from 'zero to hero' in spatial analysis and mapping through functions they have developed and compiled into R packages. This enables practical R applications in GIS, spatial analyses, spatial statistics, mapping, and web-scraping. Each chapter includes: Example data and commands for exploring it Scripts and coding to exemplify specific functionality Advice for developing greater understanding - through functions such as locator(), View(), and alternative coding to achieve the same ends Self-contained exercises for students to work through Embedded code within the descriptive text. This is a definitive 'how to' that takes students - of any discipline - from coding to actual applications and uses of R.

Using the open source, shareware program R, Professor Zelterman demonstrates the process and outcomes for a wide array of multivariate statistical applications. Chapters cover graphical displays, linear algebra, univariate, bivariate and multivariate normal distributions, factor methods, linear regression, discrimination and classification, clustering, time series models, and additional methods. Zelterman uses practical examples from diverse disciplines to welcome readers from a variety of academic specialties.
