**FAQ Which audience this book is intended for?** This book is designed to address anyone who is just above the “raw beginner” level. This book will explain some basic process such as entering commands and execute simple code instructions using a Command-Line- Interface (CLI) instead of using high resource-intensive Graphical User Interfaces (GUI). You may review some basic definitions and concepts, or skip directly to the working Formulas, as you'll prefer. It is a book intended for both the beginner and the expert developer, but suitable also for creatives, social media managers, webmasters, writers, musicians, photographers, video-makers, audio engineers, archival and restoration technicians, radio/tv broadcasters, streamers, You-Tubers, etc. and anyone who needs to automate and speed-up the manipulation, editing and conversion of many different audio/video/pictures formats. What's the difference between this book and other basic books about FFMPEG? FFMPEG has a pretty steep learning curve and the books currently around lacks on the very basics terms and syntax explanations of the commands. This book contains lots of explanations about the basic BASH terms, which unleash the functionalities and the true power of FFMPEG. Also: this book will cover other great tools for content creation, editing and automation, such as ImageMagick, Bento4, Ghostscript along with scripting automation formulas and examples. Why a book on the basics of FFMPEG? Because FFMPEG can be powerful and can be very easy for anyone, once it's core technology and syntax are understood. If you would like to know more about a ultra-fast way that gives you for free the same results that you achieve with expensive subscription-based softwares for content creation/video editing/image or audio manipulation/conversion, then this is the right book for you.

Smart Water Grids Panagiotis Tsakalides,Athanasia Panousopoulou,Grigorios Tsagkatakis,Luis Montestruque,2018-04-17 The effects of climate change, rapid urbanization, and aging infrastructure challenge water policymakers to confront a radical paradigm shift in water resources utilization. Recent advances in sensing, networking, processing, and control have provided the means for sustainable solutions in water management, and their implementation in water infrastructures is collectively referred to as smart water grids. Smart water grids depend upon cyber-physical system principles to effectively respond to issues regarding the scalability and reliability of dynamic and inaccessible environments. As such, unique smart water grid issues associated with front-end signal processing, communication, control, and data analysis must be jointly addressed, while sophisticated techniques for data analytics must be introduced into cyber-physical systems research. This book provides a thorough description of the best practices for designing and implementing cyber-physical systems that are tailored to different aspects of smart water grids. It is organized into three distinct, yet complementary areas, namely: the theory behind water-oriented cyber-physical systems with an emphasis on front-end sensing and processing, communication technologies, and learning techniques over water data; the applications and emerging topics of cyber-physical systems for water urban infrastructures, including real-life deployments, modern control tools, and economic aspects for smart water grids; and the applications and emerging topics across natural environments, emphasizing the evolution of fresh water

resources. The structured discussion yields a rich, comprehensive body of knowledge on this emerging topic of research and engineering. As water issues intensify on a global scale, this book offers an algorithmic and practical toolkit for intermediate and advanced readers as well as professionals and researchers who are active in, or interested in, learning more about smart water grids. Key Features: Emphasizes the multidisciplinary nature of this emerging topic, covering both theoretical and practical aspects of this area while providing insights on existing deployments, which can serve as design examples for new applications. Explores how modern signal processing and machine learning techniques can contribute and enrich the potential of smart water grids, well beyond conventional closed-loop control techniques. Highlights complementary aspects that will help shape the future of smart water grids, such as consumption awareness, economic aspects, and control tools in industrial water treatment as well as the impact of climate change on fresh water resources. Enables the reader to better understand this emerging topic, investing in current state-of-the-art and future technological roadmaps for smart water grids.

**Running Out of Water** Peter Rogers, Susan Leal, 2010-08-17 Water is the world's life source and essential to all living creatures. Although we live on the blue planet, only 3 percent of all our water is drinkable. Yet we've grown accustomed to using it with abandon - individuals consume about 80 to 100 gallons per day adding up to the equivalent of an Olympic sized swimming pool every year. By this decade's end, when the world population is predicted to reach 8 billion, we will face severe shortages. In this ground breaking and forward-looking book, Harvard professor Peter Rogers and former general manager of the San Francisco Utilities Commission, Susan Leal give us a sobering perspective on the water crisis—why it's happening, where it's likely to strike, and what puts the worst strain on our supply. They explain how water's unique status as a renewable but finite resource misleads us into thinking we can always produce more of it. They introduce exciting new technologies that can help revolutionize our consumption of water and explain how different areas of the world have taken the helm in alleviating the burden of water shortages. Rogers and Leal show how it takes individuals at all levels to make this happen, from grassroots organizations who monitor their community's water sources, to local officials who plan years in advance how they will appropriate water, to the national government who can invest in infrastructure for water conservation

today. Informed and inspiring, *Running out of Water* is a clarion call for action and an innovative look at how we as a nation and individuals can confront the crisis.

Artificial Neural Network-based Designs of Prestressed Concrete and Composite Structures Won-Kee Hong,2023-09-25 This book introduces artificial neural network (ANN)-based Lagrange optimization techniques for a structural design of prestressed concrete structures based on Eurocode 2, and composite structures based on American Institute of Steel Construction and American Concrete Institute standards. The book provides robust design charts for prestressed concrete structures, which are challenging to achieve using conventional design methods. Using ANN-based design charts, the holistic design of a post-tensioned beam is performed to optimize design targets (objective functions), while calculating 21 forward outputs, in arbitrary sequences, from 21 forward inputs. Applies the powerful tools of ANN to the optimization of prestressed

concrete structures and composite structures including columns and beams Multi-objective optimizations (MOO) of prestressed concrete beams are performed using an ANN-based Lagrange algorithm Offers a Pareto frontier using an ANN-based MOO for composite beams and composite columns sustaining multi-biaxial loads Heavily illustrated in color and with diverse practical design examples in line with EC2, ACI, and ASTM codes The book offers optimal solutions for structural designers and researchers, enabling readers to construct design charts to minimize their own design targets under various design requirements based on any design code.

Standing for Reason John Sexton, 2019-04-04 A powerful case for the importance of universities as an antidote to the “secular dogmatism” that increasingly infects political discourse John Sexton argues that over six decades, a “secular dogmatism,” impenetrable by dialogue or reason, has come to dominate political discourse in America. Political positions, elevated to the status of doctrinal truths, now simply are “revealed.” Our leaders and our citizens suffer from an allergy to nuance and complexity, and the enterprise of thought is in danger. Sexton sees our universities, the engines of knowledge and stewards of thought, as the antidote, and he describes the policies university leaders must embrace if their institutions are to serve this role. Acknowledging the reality of our increasingly interconnected world—and drawing on his experience as president of New York University when it opened campuses in Abu Dhabi and Shanghai—Sexton advocates for “global network universities” as a core aspect of a new educational landscape and as the crucial foundation-blocks of an interlocking world characterized by “secular ecumenism.”

From the 1990s Zimbabwe experienced a sustained economic decline challenged by both internal and external strains. Coupled with internal mis-governance and corruption, the nation plunged into a political and economic crisis which culminated in the second highest world inflation rate for an economy that is not at war. In the face of the harsh and continuously deteriorating economic environments, Zimbabweans as individuals as well as part of institutions adopted various strategies to negotiate and survive the economic scourge.
