Kathleen Armour

Técnicas de bioquímica y biología molecular David Freifelder, 1981-06 Este libro está dedicado a los universitarios de cursos superiores y a recién graduados con un conocimiento general de Química y Física. En algunas de las técnicas presentadas (especialmente en la sección de métodos espectroscópicos), se requiere un mayor conocimiento de Física, por lo que el estudiante puede necesitar ayuda del conocimiento del instructor sobre esta técnica, para una mayor comprensión general.

Bioquímica Donald Voet, Judith G. Voet, 2006

apuntes de bioquímica humana metabolismo intermedio,

Bioquímica F. B. Armstrong, Frank Bradley Armstrong, Thomas Peter Bennett, 1982 Bioquímica es un texto para un curso introductorio diseñado para acomodar estudiantes de licenciatura con formaciones ampliamente diferentes. Para el profesor, el amplio interés actual por la Bioquímica en este contexto, plantea el reto de dar un curso que cubra las necesidades educacionales de las licenciaturas en programas preprofesionales, Ciencias biológicas, Agricultura, Química, Ingeniería y en cursos de Educación científica.

Bioquímica de los procesos metabólicos Virginia Melo, Virginia Melo Ruiz, Oscar Cuamatzi, 2007 BIOQUÍMICA DE LOS PROCESOS METABÓLICOS, 2a edición, es un texto de consulta dirigido a profesores y estudiantes de ciencias biológicas y de la salud. El contenido de esta obra explica de manera sencilla y ampliamente ilustrada los distintos procesos bioquímicos que tienen lugar en los componentes celulares, así como sus interrelaciones. El lector encontrará aquí todos los principios básicos necesarios para el estudio de las propiedades y funciones de carbohidratos, proteínas, lípidos, vitaminas y minerales, así como de su síntesis y degradación. Para un mejor análisis, la información se divide en tres partes: en la primera se estudian los principios termodinámicos que sustentan el metabolismo y el significado de la termodinámica y la bioenergética; en la segunda, las propiedades generales de las distintas biomoléculas; y en la tercera, la integración de los procesos metabólicos que ocurren en las células. En esta segunda edición se presenta un capítulo nuevo: Minerales, donde se analizan las principales características, las fuentes de obtención, las manifestaciones clínicas de su carencia o exceso en la dieta y el metabolismo de los minerales terrestres más importantes, que a su vez se dividen en cuatro grupos básicos: macroelementos, microelementos, elementos traza y elementos ultratraza. Además de las 200 ilustraciones distribuidas a los

largo del texto, el aspecto innovador de esta obra radica en el estudio de las distintas rutas bioquímicas siguiendo un mapa metabólico integral.

Invitación a la Biología. Helena Curtis,2006 Esta nueva edición ha adquirido nuevos recursos didácticos, conservando a su vez el estilo tan querido por los lectores de Invitación. Cada capítulo comienza con una frase que incita al lector a reflexionar sobre los aspectos más relevantes que se desarrollan en el texto. A lo largo del libro, se han incorporado recuadros que profundizan sobre algunos de los temas mencionados en el texto; estos recuadros pueden leerse en forma independiente. En la mayoría de los capítulos se incluyeron, como en ediciones anteriores, ensayos cortos sobre diversos temas relacionados directa o indirectamente con los conceptos desarrollados. En estos ensayos, el lector encontrará debates actuales sobre problemáticas científicas que, en ocasiones, tienen un alcance social. También se discuten aspectos de la historia de la Biología, entre otros temas de interés general. Cada capítulo finaliza con una situación problemática cuyo objetivo es poner a prueba los conocimientos adquiridos por el lector en el correspondiente capítulo. También se ha actualizado la representación gráfica de los procesos y estructuras descritos a lo largo del texto. Se han renovado además, muchas de las fotografías originales, agregando nuevas o reemplazando imágenes existentes por otras que ilustran los nuevos contenidos. A lo largo del libro, se ha privilegiado un ordenamiento lógico, que permite construir los conceptos en forma paulatina, en la medida en que ciertos temas sientan la base para otros. Pero de alguna manera, la historia de las ideas siempre está presente a lo largo de los capítulos, demostrando una y otra vez que la Biología, como toda una ciencia, no es un producto acabado. A la hora de seleccionar los temas a incorporar en esta nueva edición, se ha tenido en cuenta su relevancia, su capacidad de ilustrar principios biológicos básicos y su importancia como parte necesaria de la cultura general de un ciudadano. También se ha considerado el atractivo inherente que tienen esos temas. Pero sobre todo, se ha tratado de sentar cimientos firmes sobre los cuales el lector pueda construir su conocimiento biológico. El eje principal de este libro sigue siendo, como lo fue desde sus comienzos, la evolución que es el eje alrededor del cual se estructura toda la Biología. En

torno a ese eje, se organizan la Introducción y las ocho Secciones de este libro.

La muerte de la medicina con rostro humano Petr Skrabaneck, 1999-03 Este libro trata de los peligros del culto a la salud, de los peligros de una ideología de salud nacional. Su estructura es simple, la primera parte muestra cómo el tema de la salud es explotado con fines profesionales, políticos y comerciales. La segunda parte trata sobre todos los estilos de vida (lifestylism), y nos lleva a través de ejemplos históricos en la búsqueda individual de la quimera de la salud hasta la instauración de la normalización colectiva del comportamiento como política estatal. La tercera parte se centra en la tiranía de la normalización, en la importancia que tiene mantener el paternalismo social para la supervivencia de los estilos de vida, y en otras manifestaciones de la medicina coercitiva. Este libro no trata de la medicina sino de la perversión de sus ideales, especialmente en los países dominados por la ideología médica anglo-americana. Y eso que la medicina occidental es la única que tiene fundamentos racionales.

Bioquímica de Laguna y Piña Federico Martínez Montes, Juan Pablo Pardo Vázquez, Héctor Riveros Rosas, 2018-01-01 La bioquímica, como todas las ciencias, se encuentra en constante evolución. Por esta razón los libros de texto deben también cambiar al mismo ritmo, tal y como lo hace la octava edición de Bioquímica de Laguna y Piña. En esta nueva edición se implementan cambios fundamentales entre los que destacan las figuras e interiores a color, referencias actualizadas e inclusión de Cuadros clínicos. Se adicionó al inicio de cada capítulo Conceptos clave, los cuales pretenden destacar la

información más relevante, así como Preguntas de reforzamiento que permitan al lector realizar una autoevaluación de su aprendizaje. Se incluyó un nuevo capítulo de análisis clínicos que refleja cómo se realizan los procesos metabólicos en las personas y que ayuda al estudiante a diferenciar entre un sujeto sano y uno enfermo. Estos cambios se implementaron con la intención de obtener una obra más didáctica, ágil y atractiva para los estudiantes, que facilite su autoaprendizaje y aporte ejemplos que les ayuden a comprender los fundamentos de la bioquímica.

Bioquímica con aplicaciones clínicas (Obra completa) Thomas M Devlin, 2019-06-18 Los objetivos de esta edición del Libro de Texto de Bioquímica con Aplicaciones Clínicas son: presentar una discusión clara y precisa de la bioquímica de las células de mamífero y, cuando esté justificado, de células procarióticas y eucarióticas; relacionar los hechos bioquímicos a nivel celular con los procesos fisiológicos que tienen lugar en el animal entero; y citar ejemplos de procesos bioquímicos anormales en enfermedades humanas.
