Near the Bone Christina Henry, 2021-04-13 A woman trapped on a mountain attempts to survive more than one kind of monster, in a dread-inducing horror novel from the national bestselling author Christina Henry. Mattie can't remember a time before she and William lived alone on a mountain together. She must never make him upset. But when Mattie discovers the mutilated body of a fox in the woods, she realizes that they're not alone after all. There's something in the woods that wasn't there before, something that makes strange cries in the night, something with sharp teeth and claws. When three strangers appear on the mountaintop looking for the creature in the woods, Mattie knows their presence will anger William. Terrible things happen when William is angry.

Roosevelt Wild Life Bulletins [on Forestry] Syracuse University. Roosevelt Wild Life Forest Experiment Station, 1926

Structure Geoffrey Bourne, 2012-12-02 The Biochemistry and Physiology of Bone, Second Edition: Volume I: Structure focuses on the nature and behavior of bone cells, the structure of the organic matrix of bone, mineral organization, and bone strength. It explores the histology of bone, the pathological calcification and radiation effects on bone, particularly, the morphology and cytochemistry as well as the functional significance of osteoblasts, the mode of action of the osteoclast, the ultrastructure of bone, and the mechanical engineering problems presented by bone. Organized into nine chapters, this edition begins with an overview of the general histology of bone, including tissues related to bone and its elementary constituents. It then discusses the origin of osteoblasts, the role of the osteoclast in the mechanism whereby calcium is unlocked from the skeleton under the influence of the parathyroid hormone, and the physiological and pathological effects of vitamins and hormones on skeletal tissue in vitro. It also explains the chemical composition of bone and the chemistry of bone collagen, the relationship between bone mineral and the organic matrix, the macromolecular organization of apatite and collagen, and the examinations of bone by scanning electron microscopy. The book concludes with a chapter on the shape, strength, and elasticity of bone. This book is a valuable source of information for anatomists, orthopedists, biochemists, cell biologists, physiologists, biomedical engineers, pathologists, clinicians, graduate students, professors, and others interested in the biochemical and physiological aspects of bone.

Bones and Cartilage Brian K. Hall,2005-06-20 Bones and Cartilage provides the most in-depth review ever assembled on the topic. It examines the function, development and evolution of bone and cartilage as tissues, organs and skeletal systems. It describes how bone and cartilage is developed in embryos and are maintained in adults, how bone reappears when we break a leg, or even regenerates when a newt grows a new limb, or a lizard a tail. This book also looks at the molecules and cells that make bones and cartilages and how they differ in various parts of the body and across species. It answers such questions as Is bone always bone? Do bones that develop indirectly by replacing other tissues, such as marrow, tendons or ligaments, differ from one another? Is fish bone the same as human bone? Can sharks even make bone? and many more.* Complete coverage of every aspect of bone and cartilage* Full of interesting and unusual facts* The only book available that integrates development and evolution of the skeleton* Treats all levels from molecular to clinical, embryos to evolution* Written in a lively, accessible style* Extensively illustrated and referenced* Integrates analysis of differentiation, growth and patterning* Covers all the vertebrates as well as invertebrate cartilages* Identifies the stem cells in embryos and adults that can make skeletal tissues

Taphonomy and Archaeology in the Upper Pleistocene of the Northern Yukon Territory Richard E. Morlan,1980-01-01

The concept of taphonomy has been borrowed from paleontology and applied to the analysis of vertebrate fossils from the

Old Crow region of the northern Yukon Territory. By means of this approach, archaeologically significant specimens have been isolated from the larger suite of materials which can be explained entirely in terms of natural processes. The analysis indicates that human occupation began in eastern Beringia more than 50,000 years ago and probably was continuous from that time onward, but primary archaeological deposits will be needed to clarify the historical and paleo-environmental significance of these finds. Published in English.
