Dictionary of Construction Terms Simon Tolson, 2014-04-16 The Dictionary of Construction Terms offers clear and concise explanations of the most commonly encountered legal and technical terms, phrases and abbreviations used throughout the construction industry. It will save valuable time when searching for an authoritative explanation of a frequently used term and will become a practical reference for construction lawyers, practitioners and students, as well as those in related industries including planning, property and insurance. Why you should buy this book: There is no other all-inclusive collection of legal and technical terms available at present Convenient source of information for lawyers, practitioners and students Includes a list of common technical acronyms (ie. DPC, DPM, FFL) Lists acronyms of common institutions such as the ICE, JCT and ACE Examples of definitions: Modular construction A modern construction method whereby the building is constructed using prefabricated or pre-assembled building sections or modules. The three-dimensional building sections are typically fabricated and assembled in an enclosed factory environment and then delivered to site, ready for installation. Modular construction is aimed at minimising construction time by standardising design components, providing consistent quality and allowing site preparation and building activities to commence concurrently with the construction of the factory-made modules. Snagging The process of formally inspecting the construction works to identify any incomplete works or defects in completed works. A snagging list (or 'punch list') is a schedule of defects resulting from this inspection. These items typically need to be rectified prior to the issuing of a completion certificate or handing-over of the works although in some cases a completion certificate will be issued with a snagging list attached.

Radical Construction Grammar William Croft, 2001-10-25 This book is based on the results of research in language typology, and motivated by the need for a theory to explain them. The essence of the approach is (a) that almost all aspects of grammatical structure are language specific, and (b) that language universals are to be found in conceptual structure and in the mapping of conceptual structure on to linguistic form. It proposes intimate links between syntactic and semantic structures, and argues that the basic elements of any language are not syntactic but syntactic-semantic 'Gestalts'. Professor Croft puts forward a new approach to syntactic representation and a new model of how language and languages work. He covers a wide range of syntactic phenomena, illustrating these with examples that show the varied grammatical structures of the world's languages. The book will be accessible all linguists at graduate level and beyond.

Ancient Rome and the Construction of Modern Homosexual Identities Jennifer Ingleheart,2015-10-08 Much has been written about the contribution of ancient Greece to modern discourses of homosexuality, but Rome's significant rôle has been largely overlooked. *Ancient Rome and the Construction of Modern Homosexual Identities* explores the contested history of responses to Roman antiquity, covering areas such as literature, the visual arts, popular culture, scholarship, and pornography. Essays by scholars working across a number of disciplines analyse the demonization of Rome and attempts to write it out of the history of homosexuality by early activists such as John Addington Symonds, who believed that Rome had corrupted ideal (and idealized) 'Greek love' through its decadence and sexual licentiousness. The volume's contributors also investigate the identification with Rome by men and women who have sought an alternative ancestry for their desires. The volume asks what it means to look to Rome instead of Greece, theorizes the way in which Rome itself appropriates Greece, and explores the consequences of such appropriations and identifications, both ancient and modern. From learned discussions of lesbian cunnilingus in Renaissance commentaries on Martial and Juvenal, to disgust at the sexual excesses of the emperors, to the use of Rome by the early sexologists, to modern pornographic films that linger on the bodies of gladiators and slaves, Rome has been central to homosexual desires and experiences. By interrogating the desires that create engagements with the classical past, the volume illuminates both classical reception and the history of sexuality.

Environmental Management in Construction Heng Li,Zhen Chen,2007-01-24 Demands on the construction industry are changing, and it is now virtually essential for environmental management to be considered at all stages of a project. Many construction managers are finding a quantitative approach useful, and this book outlines four quantitative methods which can be applied at different construction stages, and which fit within a comprehensive framework of dynamic Environmental Impact Assessment (EIA). These include: a method to quantitatively evaluate and reduce pollution and hazards levels a method to evaluate the environmental-consciousness of proposed construction plans a method to reduce on-site construction wastes through an incentive reward programme a method to promote C and D waste exchange in the local construction industry. With an experimental case study of the application of these methods, this book delivers a

comprehensive review of environmental management issues in construction. With regulatory requirements potentially favouring the quantitative approach, this timely guide ensures that contractors will be able to keep pace with environmental management standards.
