**Concepts in Medical Physiology** Julian Seifter, David Sloane, Austin Ratner, 2005 Written through a collaboration of expert faculty and medical students from Harvard Medical School, this innovative text delivers a straightforward and clear overview of the major principles, agents, and processes governing human physiology. Emphasis is on understanding the higher-order processes in each organ system. Concepts in Medical Physiology avoids long lists of unprioritized information and undefined jargon by presenting fresh concept diagrams and figures alongside clear explanations of quantitative concepts. It can function equally well as a primary resource or as a review. Eight major sections, comprising a total of 36 chapters, cover general principles, muscle and bone, blood and the immune system, cardiovascular physiology, pulmonary physiology, renal physiology, gastrointestinal physiology, and endocrine physiology. Many useful features simplify mastery of difficult concepts: Case studies for each major section present detailed cases with signs and symptoms, history, and laboratory data. Questions at the conclusion of each case reinforce important clinical concepts. Reviews of cell biology, basic science, and biochemistry refresh students on the foundations of physiological knowledge. Clinical Application boxes draw the connection between physiology to practical issues students face and help with preparation for the USMLE. Pathophysiology sections are featured in every chapter. Review questions with answers in each chapter aid in preparation for the examination. Integrative Physiology inserts highlight how specific systems, organs, and tissues work together. More than 350 illustrations aid with visual learning, including original schematic diagrams, photos, and tables. Concept-focused summaries conclude each chapter for more effective learning and review. Suggested readings in every chapter provide a

valuable resource for further investigation in physiological and clinical ideas.

Compendium of Histology Anders Rehfeld, Malin Nylander, Kirstine Karnov, 2017-09-07 This book has been designed to help medical students succeed with their histology classes, while using less time on studying the curriculum. The book can both be used on its own or as a supplement to the classical full-curriculum textbooks normally used by the students for their histology classes. Covering the same curriculum as the classical textbooks, from basic tissue histology to the histology of specific organs, this book is formatted and organized in a much simpler and intuitive way. Almost all text is formatted in bullets or put into structured tables. This makes it quick and easy to digest, helping the student get a good overview of the curriculum. It is easy to locate specific information in the text, such as the size of cellular structures etc. Additionally, each chapter includes simplified illustrations of various histological features. The aim of the book is to be used to quickly brush up on the curriculum, e.g. before a class or an exam. Additionally, the book includes guides to distinguish between the different histological tissues and organs that can be presented to students microscopically, e.g. during a histology spot test. This guide lists the specific characteristics of the different histological specimens and also describes how to distinguish a specimen from other similar specimens. For each histological specimen, a simplified drawing and a photomicrograph of the specimen, is presented to help the student recognize the important characteristics in the microscope. Lastly, the book contains multiple “memo boxes” in which parts of the curriculum are presented as easy-to-remember mnemonics.

Intersphincteric Resection for Low Rectal Tumors Rudolf Schiessel, Peter Metzger, 2012-07-11 The work describes a new method of sphincter salvage in surgery of rectal cancer. By contrast, intersphincteric resection allows sphincter salvage even in low tumors and is now widely accepted among experts in the field of colorectal surgery. The book will describe the basics (pathology, physiology, radiology) as well as the surgical

technique and its different modifications.
