Geometry: The Line and the Circle Maureen T. Carroll, Elyn Rykken, 2018-12-20 Geometry: The Line and the Circle is an undergraduate text with a strong narrative that is written at the appropriate level of rigor for an upper-level survey or axiomatic course in geometry. Starting with Euclid's Elements, the book connects topics in Euclidean and non-Euclidean geometry in an intentional and meaningful way, with historical context. The line and the circle are the principal characters driving the narrative. In every geometry considered—which include spherical, hyperbolic, and taxicab, as well as finite affine and projective geometries—these two objects are analyzed and highlighted. Along the way, the reader contemplates fundamental questions such as: What is a straight line? What does parallel mean? What is distance? What is area? There is a strong focus on axiomatic structures throughout the text. While Euclid is a constant inspiration and the Elements is repeatedly revisited with substantial coverage of Books I, II, III, IV, and VI, non-Euclidean geometries are introduced very early to give the reader perspective on questions of axiomatics. Rounding out the thorough coverage of axiomatics are concluding chapters on transformations and constructibility. The book is compulsively readable with great attention paid to the historical narrative and hundreds of attractive problems.

Story and Discourse Seymour Chatman, 2019-06-30 For the specialist in the study of narrative structure, this is a solid and very perceptive exploration of the issues salient to the telling of a story—whatever the medium. Chatman, whose approach here is at once dualist and structuralist, divides his subject into the 'what' of the narrative (Story) and the 'way' (Discourse)... Chatman's command of his material is impressive.—Library Journal

American Animated Cartoons of the Vietnam Era Christopher P. Lehman, 2014-01-10 In the first four years of U.S. involvement in the Vietnam War (1961-64), Hollywood did not dramatize the current military conflict but rather romanticized earlier ones. Cartoons reflected only previous trends in U.S. culture, and animators comically but patriotically remembered

the Revolutionary War, the Civil War, and both World Wars. In the early years of military escalation in Vietnam, Hollywood was simply not ready to illustrate America's contemporary radicalism and race relations in live-action or animated films. But this trend changed when US participation dramatically increased between 1965 and 1968. In the year of the Tet Offensive and the killings of the Rev. Martin Luther King, Jr., and Senator Robert Kennedy, the violence of the Vietnam War era caught up with animators. This book discusses the evolution of U.S. animation from militaristic and violent to liberal and pacifist and the role of the Vietnam War in this development. The book chronologically documents theatrical and television cartoon studios' changing responses to U.S. participation in the Vietnam War between 1961 and 1973, using as evidence the array of artistic commentary about the federal government, the armed forces, the draft, peace negotiations, the counterculture movement, racial issues, and pacifism produced during this period. The study further reveals the extent to which cartoon violence served as a barometer of national sentiment on Vietnam. When many Americans supported the war in the 1960s, scenes of bombings and gunfire were prevalent in animated films. As Americans began to favor withdrawal, militaristic images disappeared from the cartoon. Soon animated cartoons would serve as enlightening artifacts of Vietnam War-era ideology. In addition to the assessment of primary film materials, this book draws upon interviews with people involved in the production Vietnam-era films. Film critics responding in their newspaper columns to the era's innovative cartoon sociopolitical commentary also serve as invaluable references. Three informative appendices contribute to the work.

The Line, the Dot, and the Zero Nancy Blackwell Bourne, 2021-10 The Line, Dot and Zero brag and belittle each other until they realize how much better off they are when they work together. The children's picture book uses mathematical, musical and artistic concepts to tell the story that cooperation brings amazing positive consequences for everybody involved.

Tutorials on Motion Perception Alexander H. Wertheim, 2012-12-06 From August 24-29, 1980 the international Symposium on the Study of Motion Perception; Recent Developments and Applications, sponsored by NATO and organized by the editors of this book, was held in Veldhoven, the Netherlands. The meeting was attended by about eighty scholars, including psychologists, neurologists, physicists and other scientists, from fourteen different countries. During the symposium some fifty research papers were presented and a series of tutorial review papers were read and discussed. The research presentations have been published in a special issue of the international journal of psychonomics *Acta Psychologica* (Vol. 48, 1981). The present book is a compilation of the tutorial papers. The tutorials were arranged around early versions of the chapters now appearing in this book. The long discussions at the Veldhoven tutorial sessions resulted in extensive revisions of the texts prior to this publication. Unfortunately this led to a delay in publication, but we feel that this was justified by a greater depth of understanding which, in our opinion, has significantly increased the quality of the book. As they now stand, the chapters cover most of the issues relevant to the study of motion perception. Also they clearly reflect the intensive exchange of knowledge that took place during the symposium. As such we think that this book can be used both as

an advanced text for students and scientists alike and as a comprehensive reference source.

A COSMIC BIRTH... STARTING BEFORE ZERO PSJ (Peet) Schutte, 2013-07-12 I explain Genesis 1 v 1, the beginning or birth of the Universe in terms of the Bible using not theology but mathematics. I prove Genesis 1 verse 1 to be correct by using mathematics. The Bible says: IN THE BEGINNING OF CREATION, 1 when God made heaven and earth, 2 the earth was without form and void... 3... with darkness over the face of the abyss... Yes this I do explain mathematically and I manage this because I prove and explain four cosmic keys that build the Universe namely: The Titius Bode Law; The Lagrangian Points, The Roche limit and Coanda Effect Everything in nature in the Universe applies these phenomena in how space forms. The Titius Bode Law: The Lagrangian Points: The Roche Coanda Effect forms the Universe in as much as forming stars in spheres and forming galactica in circles. These principles form space and materials. This is a process that produces space and that is how the Universe began before the Universe began in space. I take the cosmic birth back to before space came about as the Big Bang.

The Untimely Art of Scribble Victoria de Rijke, 2023-05-29 This book offers new definitions, vocabularies and insights for “scribbling”, viewing it as a fascinating and revealing process shared by many different disciplines and practices. The book provides a fresh and timely perspective on the nature of mark making and the persistence of the gestural impulse from the earliest graphic marks to the most sophisticated artistic production. The typical treatment of scribbling in the literature of artistic development has cast the practice as a prelude to representation in drawing and writing, with only occasional acknowledgment of the continuing joy and experiment of making marks across many arts practices. The continuous line the author traces between the universal practice of scribbling in infancy and early childhood and the work of radical creativity for contemporary and historical artists is original and clarifying, expanding the range of drawing behaviors to that of avant-garde painters, performance and the digital.
