The Social Construction of Knowledge in Mission-Critical Environments Theodoros Katerinakis, 2018-06-27 This volume analyzes real in-flight communications to explain the dynamics of knowledge construction. With the use of a grounded theory approach, real-life scenarios for in-depth interviews with aviation informants were developed and analyzed using discourse analysis. The study revealed aspects of tacit knowledge and expertise behavior that develop in mission-critical environments. Among the findings, the author discovered:

- Silence is an interactional element and a substantial contributing factor to both completed flights and aviation incidents/accidents
- Hesitation is an early reaction when situational awareness is lacking
- The aviation sub-cultures contain several distinct micro-cultures which affect professional responsibility and decision making in micro-environments
- Human errors should be acknowledged, discussed and repaired by all actors of the flight model
- Non-verbal communication in institutional settings and mediated environments is instrumental to safe and efficient operations

The results suggest fruitful applications of theory to explore how knowledge is generated in highly structured, high-risk organizational environments, such as hospitals, nuclear plants, battlefields and crisis and disaster locations. Katerinakis explains the emergent knowledge elements in communication command with messages “spoken-heard-understood-applied, from multiple stakeholders... The interplay of theory and real-flight examples, with key interlocutors, creates a valuable narrative both for the expert reader and the lay-person interested in the insights of hospitals, nuclear plants, battlefields, safety and rescue systems, and crisis and disaster locations. Ilias Panagopoulos, PhD Command Fighter Pilot, Col (Ret) Senior Trainer, Joint Aviation Authorities (JAA) Training Organisation Safety Manager, NATO Airlift Management Programme In this path-breaking work, Theodore Katerinakis brings the study of human communication to the airplane cockpit as a knowledge environment. Toward that end, drawing on his own experience with the Air Force and Aviation Authorities and interviews with flight controllers and scores of pilots, Katerinakis both builds on moves beyond human factors research and ecological psychology... It is a work of theoretical value across disciplines and organizational settings and of practical importance as well. His lively narrative adds to translational research by translating knowledge or evidence into action in mission-critical systems. Douglas V. Porpora, PhD Professor of Sociology & Director Communication, Culture and Media Drexel University

Spacecraft System Health Management Samir Khan, 2024-12-12 Ensuring the safe and reliable operation of

spacecraft is a complex task that requires advanced technologies and innovative approaches. This comprehensive guide provides a deep dive into the world of spacecraft system health management. From understanding the intricacies of spacecraft systems to exploring cutting-edge technologies like AI and digital twins, this book offers a valuable resource for anyone interested in the field. Key Features: - Clear and accessible language: The book is written for both technical experts and general readers, making it easy to understand complex concepts. - Real-world examples: Case studies and examples from actual missions bring the theoretical concepts to life. - Future-focused: The book explores emerging technologies that are shaping the future of spacecraft health management, giving readers a glimpse into the future of space exploration. Whether you're a seasoned space engineer or simply curious about the wonders of space exploration, this book offers valuable insights into the critical role of system health management in ensuring mission success. In addition to its technical depth, the book also explores the broader implications of spacecraft health management. It discusses the ethical and societal considerations involved in space exploration and the importance of responsible innovation. By understanding these factors, readers can gain a well-rounded perspective on the field. Spacecraft System Health Management is an essential resource for anyone interested in the future of space exploration. It provides a comprehensive overview of the key concepts and technologies, making it a valuable tool for students, researchers, and professionals alike. History of Construction Cultures Volume 1 João Mascarenhas-Mateus, Ana Paula Pires, 2021-08-01 History of Construction Cultures Volume 1 contains papers presented at the 7ICCH – Seventh International Congress on Construction History, held at the Lisbon School of Architecture, Portugal, from 12 to 16 July, 2021. The conference has been organized by the Lisbon School of Architecture (FAUL), NOVA School of Social Sciences and Humanities, the Portuguese Society for Construction History Studies and the University of the Azores. The contributions cover the wide interdisciplinary spectrum of Construction History and consist on the most recent advances in theory and practical case studies analysis, following themes such as: - epistemological issues; - building actors; - building materials; - building machines, tools and equipment; - construction processes; - building services and techniques ; - structural theory and analysis ; - political, social and economic aspects; - knowledge transfer and cultural translation of construction cultures. Furthermore, papers presented at thematic sessions aim at covering important problematics, historical periods and different regions of the globe, opening new directions for Construction History research. We are what we build and how we build; thus, the study of Construction History is now more than ever at the centre of current debates as to the shape of a sustainable future for humankind. Therefore, History of Construction Cultures is a critical and indispensable work to expand our understanding of the ways in which everyday building activities have been perceived and experienced in different cultures, from ancient times to our century and all over the world.

The Engineer ,2007

The Engineer's Cost Handbook Richard E. Westney,1997-02-26 Offers coverage of each important step in engineering cost control process, from project justification to life-cycle costs. The book describes cost control systems and shows how to apply the principles of value engineering. It explains estimating methodology and the estimation of engineering, engineering equipment, and construction and labour costs; delineates productivity and cash-flow analysis; and more.

Undersea Vehicles and National Needs National Research Council,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Committee on Undersea Vehicles and National Needs,1996-12-19 The United States faces decisions requiring information about the oceans in vastly expanded scales of time and space and from oceanic sectors not accessible with the suite of tools now used by scientists and engineers. Advances in guidance and control, communications, sensors, and other technologies for undersea vehicles can provide an opportunity to understand the oceans' influence on the energy and chemical balance that sustains humankind and to manage and deliver resources from and beneath the sea. This book assesses the state of undersea vehicle technology and opportunities for vehicle applications in science and industry. It provides guidance about vehicle subsystem development priorities and describes how national research can be focused most effectively.

Human Factors Issues in Combat Identification Robert Herz,Dee Andrews,Mark Wolf,2017-09-29 This edited book presents an array of approaches on how human factors theory and research addresses the challenges associated with combat identification. Special emphasis is placed on reducing human error that leads to fratricide, which is the unintentional death or injury of friendly personnel by friendly weapons during an enemy engagement. Although fratricide has been a concern since humans first engaged in combat operations, it gained prominence during the Persian Gulf War. To reduce fratricide, advances in technological approaches to enhance combat identification (e.g., Blue Force Tracker) should be coupled with the application of human factors principles to reduce human error. The book brings together a diverse group of authors from academic and military researchers to government contractors and commercial developers to provide a single volume with broad appeal. Human Factors Issues in Combat Identification is intended for the larger human factors community within academia, the military and other organizations that work with the military such as government contractors and commercial developers as well as others interested in combat identification issues including military personnel and policy makers.

Let the Water Do the Work Bill Zeedyk,Van Clothier,2014 Let the Water Do the Work is an important contribution to riparian restoration. By thinking like a creek, one can harness the regenerative power of floods to reshape stream banks and

rebuild floodplains along gullied stream channels. Induced Meandering is an artful blend of the natural sciences - geomorphology, hydrology and ecology - which govern channel forming processes. Induced Meandering directly challenges the dominant paradigm of river and creek stabilization by promoting the intentional erosion of selected banks while fostering deposition of eroded materials on an evolving floodplain. The river self-heals as the growth of native riparian vegetation accelerates the meandering process. Not all stream channel types are appropriate for Induced Meandering, yet the Induced Meandering philosophy of going with the flow can inform all stream restoration projects. Induced meandering strives to understand rivers as timeless entities governed by immutable rules serving their watersheds, setting their own timetables, and coping with their own realities as they carry mountains grain by grain to the sea. Anyone with an interest in natural resource management in these uncertain times should read this book and put these ideas to work.

Charting a Course into the Digital Era National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Nautical Charts and Information, 1994-02-01 A number of trends and forces are converging to require change in the National Oceanic and Atmospheric Administration's (NOAA) nautical charting mission. The most salient among these are changes in customer requirements, with a growing demand for customized and digital nautical information products; a changing customer base that encompasses uses of nautical charts in conjunction with coastal management, regulation, and development activities; and advances in technologies both for acquiring survey data and for structuring, displaying, analyzing, and disseminating nautical information. This volume assesses the needs of users of nautical information; reviews existing and emerging technologies; and examines major issues associated with information acquisition, chart preparation, and dissemination. The book addresses user requirements for improved nautical chart products, as well as technical and programmatic issues relating to the need for and provision of nautical information.

The Untold Stories of the Space Shuttle Program Davide Sivoletta, 2022-11-26 In September 1969, several months after the Apollo 11 lunar landing, President Richard M. Nixon established the Space Task Force to chart NASA's path for the decades to come. This imaginative vision was shattered less than six months later when, on January 13, 1970, NASA Administrator Dr. Thomas Paine announced that, owing to funding cuts, only the reusable Space Shuttle could be afforded -- there would be no space station, no return to the Moon, and no missions to Mars. This is a story never before told about the

missions and technologies that NASA had begun to plan but never fully realized. The book is a companion to the author's previous two works on the Space Shuttle. Whereas the first two books showed how the Space Shuttle flew in space and what the program accomplished, this book explains what more the Space Shuttle could have achieved and how the space transportation system could have further matured if circumstances had been otherwise. A final chapter also discusses how some of these plans might be resurrected in future programs.

National Association of Broadcasters Engineering Handbook Graham A. Jones, David H. Layer, Thomas G. Osenkowsky, 2013-04-26 The NAB Engineering Handbook provides detailed information on virtually every aspect of the broadcast chain, from news gathering, program production and postproduction through master control and distribution links to transmission, antennas, RF propagation, cable and satellite. Hot topics covered include HD Radio, HDTV, 2 GHz broadcast auxiliary services, EAS, workflow, metadata, digital asset management, advanced video and audio compression, audio and video over IP, and Internet broadcasting. A wide range of related topics that engineers and managers need to understand are also covered, including broadcast administration, FCC practices, technical standards, security, safety, disaster planning, facility planning, project management, and engineering management. Basic principles and the latest technologies and issues are all addressed by respected professionals with first-hand experience in the broadcast industry and manufacturing. This edition has been fully revised and updated, with 104 chapters and over 2000 pages. The Engineering Handbook provides the single most comprehensive and accessible resource available for engineers and others working in production, postproduction, networks, local stations, equipment manufacturing or any of the associated areas of radio and television.

Life Cycle Analysis and Assessment in Civil Engineering: Towards an Integrated Vision Robby Caspee, Luc Taerwe, Dan Frangopol, 2018-10-31 This volume contains the papers presented at IALCCE2018, the Sixth International Symposium on Life-Cycle Civil Engineering (IALCCE2018), held in Ghent, Belgium, October 28-31, 2018. It consists of a book of extended abstracts and a USB device with full papers including the Fazlur R. Khan lecture, 8 keynote lectures, and 390 technical papers from all over the world. Contributions relate to design, inspection, assessment, maintenance or optimization in the framework of life-cycle analysis of civil engineering structures and infrastructure systems. Life-cycle aspects that are developed and discussed range from structural safety and durability to sustainability, serviceability, robustness and resilience. Applications relate to buildings, bridges and viaducts, highways and runways, tunnels and underground structures, off-shore and marine structures, dams and hydraulic structures, prefabricated design, infrastructure systems, etc. During the IALCCE2018 conference a particular focus is put on the cross-fertilization between different sub-areas of expertise and the development of an overall vision for life-cycle analysis in civil engineering. The aim of the editors is to provide a valuable source of cutting edge information for anyone interested in life-cycle analysis and assessment in civil

engineering, including researchers, practising engineers, consultants, contractors, decision makers and representatives from local authorities.

Organizational Culture in Action Gerald W. C. Driskill, 2018-12-07 Offering students and practitioners an applied approach to the subject, Organizational Culture in Action (OCA) walks them through a six-step model for analyzing an organization's culture to provide insight into positive communication practices to improve organizational ethics and effectiveness. The authors review relevant theory while integrating a constitutive approach to studying organizational culture and communication. Practical guides for multiple data collection methods are provided, and the workbook format is full of interactive tools that engage students and reinforce learning. The revised OCA cultural analysis model in this edition provides the below elements. • The revised first step in the model – articulating the value of cultural analysis includes connections to public relations and crisis management. • A definition of communication and the analysis process that foregrounds ethics throughout the book is included. • Recent research on organizational moral learning is integrated in the ethics chapter, and throughout the book. • The Communicative Constitutive of Organizations is now foregrounded throughout the book, and reflected in a table capturing variable and metaphor approaches to culture. • The latest applied research is integrated in units on diversity, change, leadership, and effectiveness in relation to positive organizational communication. • Enriched guides on multiple data collection methods now includes surveys. • Cases, examples, and applications relevant to crisis, employee engagement, virtual organizations, conflict management, and public relations are provided. Professionals come away equipped to apply cultural insights to fostering inclusiveness in relation to diversity, supporting organizational change, making leadership more dynamic, understanding the link between ethics and culture, and achieving personal and professional growth.
