The Practice of Health Program Evaluation David Grembowski,2001-04-13 As more and more money is spent developing programs and services to solve health problems, how can one know if a specific health program works or what it would take to improve it? Aimed at addressing this issue, The Practice of Health Program Evaluation provides readers with the methods to evaluate health programs and the expertise to navigate the political terrain so as to work more effectively with decision makers and other groups. To convey these principles, Grembowski uses the metaphor of evaluation being a three-act play with a variety of actors and interest groups, each having a role that involves entering and exiting the stage at different points in the evaluation process.

Research Methods in Criminal Justice and Criminology Callie Marie Rennison, Timothy C. Hart, 2018-02-06 This is a great text. It is comprehensive and easy to understand. The illustrations will enable students to learn and remember the information. This is the first research methods text I have read that is actually fun to read. —Tina L. Freiburger, University of Wisconsin-Milwaukee *Research Methods in Criminal Justice and Criminology* connects key concepts to real field research and practices using contemporary examples and recurring case studies that demonstrate how concepts relate to students' lives. Authors Callie M. Rennison and Timothy C. Hart introduce practical research strategies used in criminal justice to show students how a research question can become a policy that changes or influences criminal justice practices. The book's student-driven approach addresses both the why and the how as it covers the research process and focuses on the practical application of data collection and analysis. By demonstrating the variety of ways research can be used and reinforcing the need to discern quality research, the book prepares students to become critical consumers and ethical producers of research. Program Evaluation Susan P. Giancola, 2025-04-14 This text aims to build evaluation capacity by increasing knowledge about evaluation and improving skills to conduct evaluations. The book's embedded approach uses program theory to understand relationships between activities and objectives, logic modeling to represent the program's theory, and an evaluation matrix to structure the evaluation within the program. The approach is systematic and focused on continuous improvement. The Second Edition adds topics suggested by users of the book, incorporates content that the author has added to her own classes, and covers emerging areas in evaluation since the publication of the first edition such as artificial intelligence and equity in evaluation. A companion website at <http://edge.sagepub.com/Giancola2e> includes a number of instructor resources including editable PowerPoint slides and assignments.

Design and Analysis of Time Series Experiments Richard McCleary, David McDowall, Bradley Bartos, 2017-05-11 *Design and Analysis of Time Series Experiments* presents the elements of statistical time series analysis while also addressing recent developments in research design and causal modeling. A distinguishing feature of the book is its integration of design and analysis of time series experiments. Readers learn not only how-to skills but also the underlying

rationales for design features and analytical methods. ARIMA algebra, Box-Jenkins-Tiao models and model-building strategies, forecasting, and Box-Tiao impact models are developed in separate chapters. The presentation of the models and model-building assumes only exposure to an introductory statistics course, with more difficult mathematical material relegated to appendices. Separate chapters cover threats to statistical conclusion validity, internal validity, construct validity, and external validity with an emphasis on how these threats arise in time series experiments. Design structures for controlling the threats are presented and illustrated through examples. The chapters on statistical conclusion validity and internal validity introduce Bayesian methods, counterfactual causality, and synthetic control group designs. Building on the earlier time series books by McCleary and McDowall, *Design and Analysis of Time Series Experiments* includes recent developments in modeling, and considers design issues in greater detail than does any existing work. Drawing examples from criminology, economics, education, pharmacology, public policy, program evaluation, public health, and psychology, the text is addressed to researchers and graduate students in a wide range of behavioral, biomedical and social sciences. It will appeal to those who want to conduct or interpret time series experiments, as well as to those interested in research designs for causal inference.
