Glycemic Diet Cookbook Aaron Nelson Ph D,2020-09-04 The low glycemic (low GI) diet is based on the concept of the glycemic index (GI). Studies have shown that the low GI diet may result in weight loss, reduce blood sugar levels, and lower the risk of heart disease and type 2 diabetes. However, the way it ranks foods has been criticized for being unreliable and

failing to reflect foods' overall healthiness. The glycemic index (GI) of a food is a measure of how a specific food with carbohydrates causes blood sugar to rise. It is given as a number compared to the effect on your blood sugar of eating either glucose (a type of sugar) or white bread. When you eat a food or beverage containing carbohydrates, your body breaks down the carbs into a type of sugar called glucose. The glucose goes into your bloodstream and causes your blood glucose (blood sugar) levels to rise. Compare to low-glycemic foods, high-glycemic foods lead to a quicker and greater spike in blood sugar levels. These spikes are considered unhealthy for a few reasons. They raise your average blood glucose levels. They place a higher demand for insulin on your body. They lead to more dramatic dips in blood glucose after the spike, potentially causing hunger, carbohydrate cravings, and weakness. A low-GI diet and meal plan can help you avoid the blood sugar roller coaster, but the GI is not on the nutrition label of most foods. Instead, you will probably to look at a list of the GI of foods. The following are several low-glycemic foods. The three GI ratings are: Low: 55 or fewer Medium: 56-69 High: 70 or more Foods with a low GI value are the preferred choice. They're slowly digested and absorbed, causing a slower and smaller rise in blood sugar levels. On the other hand, foods with a high GI value should be limited. They're quickly digested and absorbed, resulting in a rapid rise and fall of blood sugar levels. You can use this database to find the GI value (and glycemic load, described below) of common foods. It's important to note that foods are only assigned a GI value if they contain carbs. Hence, foods without carbs won't be found on GI lists.

Low Glycemic Diet Cookbook For Beginners and Dummies Sharon Bronson, 2020-08-21 The low glycemic diet, also referred to as the glycemic index diet or the GI diet, has become very popular in recent years. Although it has been around for two decades as a means of controlling blood sugar in diabetics, it really began receiving a lot of attention from the general public when its principles were incorporated into well-known weight loss programs such as The South Beach Diet, the Zone Diet, and Nutrisystem. Very shortly put, low glycemic diets are based on the glycemic index (GI) which is designed to help people make food choices that will avoid insulin spikes and maintain a fairly constant blood glucose (sugar) level. To make navigating this page easier for you, I have made some quick links below, so that you can jump directly to your specific topic of interest. However, I do recommend reading the whole article for a proper, in-depth understanding of everything related to 'glycemic' (the foods, the index, the load etc.). The Glycemic Index and the concept of eating low glycemic foods was created in the early 1980s by Dr. David Jenkins, a professor in the Department of Nutritional Science at the University of Toronto, Canada. It was originally designed as a way of helping diabetics manage their blood sugar levels, but in recent years it has also been used by those wishing to lose weight or simply adopt a healthier lifestyle. Basically, the GI is a measurement

of the effect certain carbohydrate-containing foods have on your blood sugar. So, to understand the glycemic index, and any diet that uses its principles, you must first understand the relationship between the food you eat and blood glucose levels. The goal of the glycemic index is to help you identify low glycemic foods that will allow you to regulate your own blood sugar while avoiding all the extreme or sudden fluctuations. It was created by measuring the changes in blood sugar that occurred after eating carbohydrate-containing foods and then ranking them based on these effects.

Why Low GI Not all carbohydrate foods are created equal, in fact they behave quite differently in our bodies. The glycemic index or GI describes this difference by ranking carbohydrates according to their effect on our blood glucose levels. The low GI diet is the secret to long-term health reducing your risk of heart disease and diabetes and is the key to sustainable weight loss. A low glycemic index diet is one of the best ways to look after your health, and lose excess weight effectively and naturally. The weight reduced through a low GI diet approach is safe, and you will not find yourself needing to starve on just carrots and lettuce! The glycemic index ranks the foods from 0-100 according to the speed at which they affect your blood sugar levels in the 2 or 3 hours after eating. The low-GI diet will help you to lose weight while naturally controlling hunger and appetite, so, unlike other diets, the low-GI way of eating won't leave you with a sense of deprivation. The gradual release of energy from the low-GI foods will leave you feeling lively and looking good. why diabetic friendly? Diabetes is becoming a national epidemic. The number of new cases diagnosed increased by from 878,000 in 1997 to 25.8 million children and adults in the United States—8.3% of the population—have diabetes.
