Scientific impact indicators of teaching staff of Greek universities and higher educational institutions for 2017 according to Scopus Giorgos P. Kouropoulos, 2017-12-30

Scope: The classification of the permanent and non-permanent scientific and teaching staff of universities and applied universities – technological educational institutions which belong to the higher education sector in Greece. The classification takes place in a single list and is based on the citation impact, bibliometric and other scientometric indicators according to Scopus database. Classification criteria: The first criterion for the classification is h-index indicator. In the case of equal h-index indicator between two or more professors, the following bibliometric indicators will be used for each paper author/professor: The number of total citations, the number of included papers in Scopus platform, the total impact factor, the number of citable papers/documents cd and finally the λc ratio. Information resource: Information related to the h-index indicator, number of citations, number of indexed articles and number of citable documents, are collected by the individual public profiles of professors in the Scopus platform. In addition, the calculation of total impact factor and λc ratio of each professor is carried out using the data of the Scopus platform.

Methodology: The first step includes the search of the names of members of permanent and non permanent teaching staff for each faculty of all universities and higher educational institutions in Greece via their official web pages. The second step consists of two parts. The first part deals with search of the names of each member on the Scopus platform in Latin characters and the second part deals with identification and matching of each Scopus profile with the corresponding member of teaching staff for each faculty. In the third step follows the typing and transfer of numerical values, bibliometric indicators and other data from Scopus platform to the computer file and next the calculation of parameters cd and λc . During the fourth step, the classification process is carried out via Microsoft excel according to the above criteria. In the last fifth step, the real names of professors and authors are masked using a special function of the software, due to personal data purposes.

Sampling data: The sampling period varied from 02/08/2017 to 06/12/2017, more analytically see Table 2. Totally, a sample consisting of 8715 members of teaching staff of higher educational institutions was collected according to the above step 1 through 3. Sampling error is equal to $\pm 1.07\%$ in 95% confidence interval. Conclusions: There are 6144 members of permanent and non permanent teaching staff with $h\text{-index} \geq 5$ and totally 8715 members of Greek universities and higher educational institutions with $h\text{-index} \geq 0$. The average h-index for the sample of 6144 members is calculated to $14.8 \pm 0.9\%$

and the average number of citations for the same sample is calculated to $1221 \pm 2.9\%$. The average h-index for the sample of 8715 professors is calculated to $11.1 \pm 0.9\%$ and the average number of citations for the same sample is calculated to $872 \pm 2.9\%$.

Ranking of researchers and scientists in Greece in 2017 according to Google Scholar database Giorgos P. Kouropoulos, 2017-07-22 Scope: The classification of researchers and scientists in Greece in a unified list based on the citation impact and dissemination level of their scientific work according to Google Scholar database Classification criteria: First criterion is h-index. In the case of equal h-index, the following scientometric indicators are used for the classification. The number of total citations, the i10-index, the total impact factor of scientist, the m-index or m-quotient of scientist. Information resource: The h-index, citations and i10-index derived from the public profiles of researchers in the Google Scholar database. In addition, the calculation of total impact factor and m-index of each researcher is carried out using the data from the Google Scholar database. Methodology: Researchers and scientists accounts in the Google Scholar are detected by official domain names of institutions, universities and other organizations of public and private sector. The institution, university and organization of each researcher is defined by domain of email address that have been validated in the Google Scholar. In the next step, the values of h-index, citations and i10-index are recorded from profiles of researchers. If necessary, the total number of uploaded scientific articles and the dates of first published and last published article of researcher are recorded, these data are required for calculation of total impact factor and m-index of each researcher. In the final step, the classification of all researchers and scientist according to h-index and citations number, i10-index, impact factor and m-index is carried out.

Fortunately, our capacity to procure and apply such information is rapidly rising. As medicine becomes more individualized, the implementation of health IT and data interoperability become essential components to delivering quality healthcare. *Quality Assurance in the Era of Individualized Medicine* is a collection of innovative research on the methods and utilization of digital readouts to fashion an individualized therapy instead of a mass-population-directed strategy. While highlighting topics including assistive technologies, patient management, and clinical practices, this book is ideally designed for health professionals, doctors, nurses, hospital management, medical administrators, IT specialists, data scientists, researchers, academicians, and students.

Quality of Healthcare in the Aftermath of the COVID-19 Pandemic Moumtzoglou, Anastasius, 2021-12-10 The COVID-19 pandemic has put massive stress on healthcare professionals' formal training, their creed to do no harm, and the

patient safety movement. COVID-19 affects all aspects of daily life and healthcare's organizational culture and values. Healthcare institutions experience absenteeism, change in commerce patterns, and interrupted supply/delivery in this context. It has also revealed the extensive amounts of data needed for population health management, as well as the opportunities afforded by mainstreaming telehealth and virtual care capabilities, thus making the implementation of health IT essential in the post-pandemic era. *Quality of Healthcare in the Aftermath of the COVID-19 Pandemic* clarifies how healthcare professionals might provide their services differently than treating a patient through its vicinity with multiple providers. It examines the notion that healthcare education requires a pack of healthcare workers from varied educational backgrounds and training levels for the nuances of a disease. Covering topics such as blockchain technology, power density analysis, and supply chain, this book is a valuable resource for undergraduate and extended degree program students, graduate students of healthcare quality and health services management, healthcare managers, health professionals, researchers, professors, and academicians.

Immune determinants of COVID-19 protection and disease: a Focus on Asymptomatic COVID and Long COVID Mariana Gisela Bego, Levon Abrahamyan, Francine C. A. Gerard, Maria Polyak, Tram N. Q. Pham, 2023-04-26

Clinical Genitourinary Pathology Andreas C. Lazaris, 2018-07-13 This book presents clinicopathological insights into common genitourinary diseases, especially those of neoplastic nature, and introduces experiential learning based on case presentations (case-based learning). One of the tasks that trainees face is converting the extensive amount of data into medical experience. Using successive microscopic images, the book gradually and analytically presents diagnostic procedures for the genitourinary system (kidney, urinary bladder, prostate gland and testis). Characteristic cases are presented for each organ, each ending with a clinical commentary and key messages. This form of presentation helps readers acquire the valuable skill of effective diagnostic thinking, focusing their attention on the essential microscopic findings and disregarding insubstantial findings. Although clinical applications are frequently based on pathological findings which therefore need to be clearly described and recorded, the importance of this in everyday medical practice is often ignored by medical students and downplayed by clinicians. Demonstrating how knowledge can be practically applied, the book is a valuable resource mainly for residents in pathology, urology and oncology but also for medical students with a special interest in histopathology.
