**Visual Double Stars: Formation, Dynamics and Evolutionary Tracks** J.A. Docobo, A. Elipe, H. McAlister, 2012-12-06 This workshop is devoted to Double stars. The general topics of the meeting were: formation, dynamics and evolutionary tracks. In accordance with the pure tradition of the Saint James way, pilgrims from all over the world come to meet together in Santiago. Although with a common interest (double stars), this meeting was a multidisciplinary one, since scientists with different backgrounds participated in it. As a matter of fact, we think that this is the first workshop jointly supported by IAU

Commissions 7 (Celestial mechanics) and 26 (Double and multiple stars). It is our belief that this meeting will be the origin of a more close relations and common research. This meeting was held under the invitation of the University of Santiago de Compostela to commemorate its fifth centenary, and organized by the Astronomical Observatory named after its founder, Ramon M. Aller, who made significant contributions in the study of visual double stars, and was one of the pioneers who put the seeds of the present blossoming of Astronomy in Spain. The Scientific Organizing Committee was formed by Drs. C. Allen, P. Couteau, J. A. Docobo, R. Dvorak, A. Elipe, S. Ferraz-Mello (co-chairman), H.A.McAlister, M. Valtonen, C.Worley (chairman) and H. Zinnecker. The Local Organizing Committee was formed by Drs. J. A. Docobo (chairman), A.

**British University Observatories 1772-1939** Roger Hutchins, 2017-03-02 British University Observatories fills a gap in the historiography of British astronomy by offering the histories of observatories identified as a group by their shared characteristics. The first full histories of the Oxford and Cambridge observatories are here central to an explanatory history of each of the six that undertook research before World War II - Oxford, Dunsink, Cambridge, Durham, Glasgow and London. Each struggled to evolve in the middle ground between the royal observatories and those of the 'Grand Amateurs' in the nineteenth century. Fundamental issues are how and why astronomy came into the universities, how research was reconciled with teaching, lack of endowment, and response to the challenge of astrophysics. One organizing theme is the central importance of the individual professor-directors in determining the fortunes of these observatories, the community of assistants, and their role in institutional politics sometimes of the murkiest kind, patronage networks and discipline shaping coteries. The use of many primary sources illustrates personal motivations and experience. This book will intrigue anyone interested in the history of astronomy, of telescopes, of scientific institutions, and of the history of universities. The history of each individual observatory can easily be followed from foundation to 1939, or compared to experience elsewhere across the period. Astronomy is competitive and international, and the British experience is contextualised by comparison for the first time to those in Germany, France, Italy and the USA.

**Hubble Space Telescope** Space Telescope Science Institute (U.S.), 1993 The review of proposals for use of the Hubble Space Telescope (HST) is carried out in two phases, which are managed by the Space Telescope Science Institute (STScI). In Phase I, proposers submit the Proposal Submission Form, Cover Page, General Form (GF), and Observation Summary Form (OSF) for review by the Telescope Allocation Committee (TAC). The OSF is intended to provide relatively general descriptions of the targets and the proposed observations. The TAC review results in a list of projects that are recommended for implementation to the STScI Director. During Phase II, the General Observers (GO's) whose projects have been recommended provide complete details of their proposed observations, to allow the STScI to conduct a full technical feasibility review of the programs. Also in Phase II, a cross-proposal exposure duplication test searches for similar exposures among previous and current HST programs. Up-to-date Exposure Catalogs are made available for the proposers in Phase I in

order to avoid duplication-related problems during Phase II. Upon final approval by the Director, the Phase II information is then used to schedule and obtain the actual observations. This document, the Phase I Proposal Instructions, has the following purposes: It describes the information that must be submitted to STScI by Phase I proposers, both electronically and on paper, and describes how to submit it (Section 2). It describes how to fill out the forms (Section 3). It describes how to estimate the amount of spacecraft time that the proposed observations will require (Section 4). It describes how to submit proposals for three additional research opportunities with the HST (Section 5).: -The Archival Research Program. -The Snapshot Survey Program. -The Director's Discretionary Time Program. It provides detailed information about the parameters that are used in the forms to describe the requested observations (Appendices A, C, D, and E), and includes a list of common problems (Appendix B). It provides information about the preparation and electronic submission of proposal files (Appendices F and G). Examples of completed proposal forms are included. It provides blank copies of the paper forms (Appendix J). It is assumed that readers of this document are familiar with the current versions of the Call for Proposals and of the appropriate Instrument Handbooks. These documents are available in most institutional libraries or from the STScI User Support Branch (USB). The Call for Proposals provides a list of the technical documents that are available.

**The Very Large Telescope Interferometer Challenges for the Future** Paulo J.V. Garcia,Andreas Glindemann,Thomas Henning,Fabien Malbet,2013-11-11 A JENAM 2002 Workshop, Porto, Portugal, 3-5 September 2002

**Science with the VLT** Jeremy Walsh,Ivan J. Danziger,2013-06-05 ESO's new and exciting telescope, the VLT in Chile, will certainly bring a host of new results in optical astronomy for the years to come. This workshop surveys a large variety of possible observations and the needed instrumentation. It is an exciting overview of front research in astronomy rarely published before. The book covers the whole gamut of optical-IR astronomy from the solar system, search for planets in nearby stars, physics of galactic stars and clusters, galactic structure, structure of nearby galaxies, AGN and quasars, clusters of galaxies, to large structure and cosmology. Furthermore it summarizes the two panel discussions.

**The Power of Optical/IR Interferometry: Recent Scientific Results and 2nd Generation Instrumentation** Andrea Richichi,Francoise Delplancke,Francesco Paresce,Alain Chelli,2007-10-12 Celebrating the completion of the first phase of VLTI development, the ESO workshop The Power of Optical/IR Interferometry, held in 2005, gathered researchers together to review and discuss not just interferometers, but also how science uses interferometers and their impact on astronomy as a whole. This volume contains the proceedings of this workshop, serving as a reference for astronomers working with optical and infrared interferometry.

*Stellar Atmospheres: Beyond Classical Models* L. Crivellari,Ivan Hubeny,D. Hummer,2012-12-06 The theory of stellar atmospheres is one of the most important branches of modern astrophysics. It is first of all a major tool for understanding all aspects of stars. As the physical properties of their outer layers can now be found with high precision, firm conclusions can be drawn about the internal structure and evolution of stars. Moreover, improvements in our knowledge of the chemical composition of stars is shedding new light on the chemical evolution of galaxies and of the Universe as a whole. Because the outer layers of stars are among the best-understood astrophysical objects, the theory of stellar atmospheres plays an important role in the study of many other types of objects. These include planetary nebulae, H II regions, interstellar matter,

and objects of interest in high-energy astrophysics, such as accretion disks (close binaries, dwarf novae, cataclysmic variables, quasars, active galactic nuclei), pulsar magnetospheres, and Seyfert galaxies. Finally, as stars provide a laboratory in which plasmas can be studied under more extreme conditions than on earth, the study of stellar atmospheres has strong connections with modern physics. Astronomical observations provided a vital stimulus in the early stages of quantum theory and atomic physics; even today topics such as low-temperature dielectronic recombination develop hand in hand with the interpretation of stellar and nebular spectra. Early work on MHD was similarly motivated. Many such connections remain to be explored.

**The Early Earth** James Badro, Michael J. Walter, 2015-08-28 The Early Earth: Accretion and Differentiation provides a multidisciplinary overview of the state of the art in understanding the formation and primordial evolution of the Earth. The fundamental structure of the Earth as we know it today was inherited from the initial conditions 4.56 billion years ago as a consequence of planetesimal accretion, large impacts among planetary objects, and planetary-scale differentiation. The evolution of the Earth from a molten ball of metal and magma to the tectonically active, dynamic, habitable planet that we know today is unique among the terrestrial planets, and understanding the earliest processes that led to Earth's current state is the essence of this volume. Important results have emerged from a wide range of disciplines including cosmochemistry, geochemistry, experimental petrology, experimental and theoretical mineral physics and geodynamics. The topics in this volume include: Condensation of primitive objects in the solar nebula, planetary building blocks Early and late accretion and planetary dynamic modeling Primordial differentiation, core formation, Magma Ocean evolution and crystallization This volume will be a valuable resource for graduate students, academics, and researchers in the fields of geophysics, geochemistry, cosmochemistry, and planetary science.

**Dust and Molecules in Evolved Stars** I. Cherchneff, T.J. Millar, 2013-11-11 Dust and molecules are found in a large variety of astrophysical environments, in particular in the circumstellar material ejected by evolved stars. This book brings together the leading astronomers and astrophysicists in the field of molecular astrophysics and stellar physics to discuss the important issues of dust and molecular formation, the role of solids in circumstellar environments, molecules as probes of circumstellar parameters, the stellar contribution to the enrichment of the Galaxy, and the latest observational data in various wavelength domains, in particular in the infrared with results from the Infrared Space Observatory. The astrophysical scenarios include late-type stars, novae, Wolf-Rayet stars, Luminous Blue Variables and supernovae. Audience: Researchers and graduate students in the fields of stellar physics, stellar evolution and astrochemistry.

**Dynamics, Ephemerides and Astrometry of the Solar System** Sylvio Ferraz-Mello, B. Morando, J.-E. Arlot, 1996-06-30 IAU Symposium 172 Dynamics, Ephemerides and Astrometry of the Solar System was held in Paris in July, 1995. 250 scientists from 33 countries attended the symposium; 24 invited lectures and 165 contributed papers were presented (117 of

which were posters). The papers covered topics on celestial mechanics (chaos and evolution of the solar system, asteroids, theories of the motion of the planets, the moon and the natural satellites), methods (symplectic mappings and elliptic functions), astrometry (CCD observations, VLBI and radar observations), ephemerides (representation and numerical integration) and on the history of celestial mechanics.

*The Structure of the Sun* T. Roca Cortes, F. Sánchez, Francisco Sanchez, 1996-08-28 The complex internal structure of the Sun can now be studied in detail through helioseismology and neutrino astronomy. The VI Canary Islands Winter School of Astrophysics was dedicated to examining these powerful new techniques. Based on this meeting, eight specially-written chapters by world-experts are presented in this timely volume. We are shown how the internal composition and dynamical structure of the Sun can be deduced through helioseismology; and how the central temperature can be determined from the flux of solar neutrinos. This volume provides an excellent introduction for graduate students and an up-to-date overview for researchers working on the Sun, neutrino astronomy and helio- and asteroseismology.

**The Impact of Large Scale Near-IR Sky Surveys** F. Garzón, N. Epchtein, A. Omont, W.B. Burton, P. Persi, 2012-12-06 After a year's successful operation, the European DENIS project is now a scientific reality and its close cousin 2MASS (USA) is about to come into operation. The observational and data reduction processes of both DENIS and 2MASS are fully described in this volume. Already the impact of DENIS is making itself felt in the astronomical community in areas of research as diverse as cosmology, the evolution of galaxies, the interstellar medium, the search for brown dwarfs, and stellar structure and evolution. The first routine results from DENIS and the preliminary results from the 2MASS prototype camera are discussed and compared with other surveys across the wavelength spectrum, both space- and ground-based, including the Digitized Sky Survey, ISO and ROSAT.

**Optical Detectors for Astronomy** James W. Beletic, Paola Amico, 2012-12-06 The Workshop Optical Detectors for Astronomy was held during October 8-10, 1996 at the headquarters of the European Southern Observatory in Garching, Germany. This was the third meeting of its kind, previous meetings being held in 1991 and 1993, but this is the first ESO CCD Workshop that has published proceedings. Most of the leading manufacturers and major astronomical observatories were represented, with the 117 attendees coming together from 14 different countries that spanned every continent on Earth. The motivation for the ESO CCD Workshop series is the creation of informal and open venue of information exchange about astronomical CCD detectors and systems. Judging from the reaction and feedback of the participants, the 1996 workshop was as successful as the previous editions, which is a credit to all who attended. The Workshop was organized as a mixture of invited talks, oral presentations, poster sessions and roundtable discussions, the latter used to foster a free exchange of ideas among participants. These technical sessions were complemented by an opening reception and a congenial evening in downtown Munich, which included a walking tour of the historic area followed by dinner at the famous

Franziskaner brewery and an after dinner talk by Walter Kosonocky, who reviewed the history of CCD technology.

*Theoretical and Observational Problems Related to Solar Eclipses* Z. Mouradian, Magda Stavinschi, 2012-12-06 The NATO ARW on the problems of ground-based observations of Solar Eclipses was held in Sinaia (Romania) between 1 and 5 June 1996. The Workshop was divided into seven sessions, in which 17 papers were given, by key speakers, along with 30 oral presentations. Additionally, 30 posters were presented. This issue contains only the invited and oral papers. The posters are to be published in a special issue of the Romanian Astronomical Journal. The contributions were based on our present knowledge of solar corona physics and on the perspectives for future total eclipse observations, focussing especially on that of August 11, 1999, which will be the last eclipse of the century. The workshop sessions reviewed the results of past eclipse observations, coronal hot and cold structures, coronal heating, public education, and instrumental problems. At the end of the meeting a fruitful general discussion drew out problems to be studied and techniques to be used for forthcoming observations. Posters completed the workshop contributions.
