**Always vs forever in Verilog HDL - Stack Overflow** Nov 28, 2014 · The always construct can be used at the module level to create a procedural block that is always triggered. Typically it is followed by an event control, e.g., you might write, within a module, something like: `always @(posedge clk) always @(en or d) always @*`, can also use `@(*)` This is the typical way to write latches, flops, etc. The forever ... In your example, there are no any variables used inside always block, so this always `@(*)` block will not work here. If the item in the code is evaluated it will trigger the process. Simple as that. If an item is in an if/else, a case, assigned to a variable, or anything else, it will be "evaluated" and thus cause the process to be triggered. *using always@\* | meaning and drawbacks - Stack Overflow* May 7, 2011 · can you say what is the meaning of that always @ \* Is there any possible side effects after using that statement ? **verilog - What does always block @ (\*) means? - Stack Overflow** The (\*) means "build the sensitivity list for me". For example, if you had a statement `a = b + c`; then you'd want a to change every time either b or c changes. In other words, a is "sensitive" to b & c. So to set this up: `always @( b or c ) begin a = b + c; end` But imagine you had a large always block that was sensitive to loads of signals. Writing the sensitivity list would take ages.
