Tratado de neurología clínica Federico Micheli,2002 La distonía es uno de los movimientos involuntarios menos diagnosticados y, en consecuencia, peor manejados en la práctica médica. Dada la falta de información que tienen tanto los pacientes como sus familiares los autores han decidido volcar, en un lenguaje sencillo, sus conocimientos y experiencias para demoler algunos mitos sobre el tema y aclarar si se trata o no de una enfermedad, a quienes afecta, su origen, síntomas y diagnóstico y, sobre todo, las formas de aliviarlo.

Charcot-Marie-Tooth Disorders Michael E. Shy, John Kamholz, Robert E. Lovelace, 1999 This volume discusses developments in research and clinical aspects of Charcot-Marie-Tooth disease (CMT), the most common peripheral neuropathy in humans. The genetic causes of most of the demyelinating forms of CMT have now been identified, and the molecular biology of peripheral nervous structure and the function of many of the molecules involved in the pathogenesis of CMT are becoming clearer. With the development of viral vectors to introduce genes into the peripheral nervous system, as well as the trophic factors to promote nerve regeneration and remyelination, gene therapy for CMT is becoming a realistic possibility. These issues, among others, are explored in this volume, and areas of future research are outlined.

Semiología de las enfermedades reumáticas España De Reumatología Sociedad, 2006 A pesar de la poca tan tecnificada y maquinista en la que vivimos, en nuestra especialidad, la Reumatología, siguen siendo básicos y fundamentales los datos clínicos. La clínica es el arte de obtener el mayor número de datos posibles sobre una dolencia basándose en la proximidad, en la permanencia cercana al lecho del paciente. Un buen entrenamiento en la correcta adquisición del relato sintomático y en la sistematización de los datos de la exploración constituyen, efectivamente, la base del juicio clínico que, a su vez, es el origen de la evaluación diagnóstica, pronóstica y terapéutica.
