Major French Cities facing Metropolization Alain Bourdin, 2024-05-27 This book characterizes a type of city, i.e. the metropolis, by using characteristics which have very little to do with its size. It distinguishes between metropolises and megacities and defines these different characteristics by bringing together elements related to facilities, accessibility and economic power on one hand and other elements which relate more to the capacity for innovation and, more generally, to the knowledge society and economy. All of which demonstrate the process of metropolization, as well as elements of daily life and, more generally, elements which relate to the urban experience. To live in a metropolis is not only to benefit from more urban amenities, but also to live in a different way, in particular, in a world which is much more diverse in every respect. Based on a series of metropolization criteria constructed and discussed, this book goes beyond ordinary statistical approaches to integrate the interterritorial scale of metropolitan systems as well as their qualitative dimension. Following in Simmel's footsteps, it shows that a city is also an atmosphere, a mentality, a spirit, all of which are poorly captured by statistical data. As such, the book focuses on five major themes: networks, economic development, social issues, urban form and the ecological and digital transition. The book makes an interesting read for urban planners, sociologists, planners and architects, and all specialists working in this field.

Mega Urban Projects in China Yanpeng Jiang, 2022-11-14 This book is the first systematic account of mega urban projects in China, covering their construction, operation and planning. It is a detailed examination of the planning and construction of Hongqiao and its impact on local residents. In short, the aim of this book is to examine the process of planning and development of the Hongqiao transportation and commercial zone, to explore its relationship to urban development and spatial restructuring in Shanghai, and in doing so to comment on and critique the nature of urban change in contemporary China, which is characterized as property- and infrastructure-driven. Mega urban projects are arguably the quintessential symbol of entrepreneurial urbanism, and it is no coincidence that they have become a familiar part of the urban scene throughout the world, not least in East Asia. They can be seen as both a consequence of, and a response to, the

deindustrialization of leading cities, first in North America and Europe and then in East Asia, as economies transitioned to globalized neoliberalism. This book provides a comprehensive overview of the main features of the land-based urban growth coalition formed in Hongqiao by introducing the detailed picture of the Hongqiao project, and it outlines the recent example of the competitive rush to urban projects in China's largest cities that has led to the proliferation of new financial districts in Beijing and Guangzhou.

World Cities and Urban Form Mike Jenks, Daniel Kozak, Pattaranan Takkanon, 2013-12-02 This book presents new research and theory at the regional scale showing the forms metropolitan regions might take to achieve sustainability. At the city scale the book presents case studies based on the latest research and practice from Europe, Asia and North America, showing how both planning and flagship design can propel cities into world class status, and also improve sustainability. The contributors explore the tension between polycentric and potentially sustainable development, and urban fragmentation in a physical context, but also in a wider cultural, social and economic context.

Urban Soil and Water Degradation, 2022-11-17 Urban Soil and Water Degradation, Volume Seven explores a wide breadth of emerging and state-of-the-art technologies, including comprehensive coverage of topics such as Urban sprawl, Soil degradation, Hydrological challenges in urban areas, Soil and water quality – pollutant sources and pathways, Ecosystem services in urban areas, Freshwater-related nature-based solutions in cities, Property Rights and Climate Change - land use under changing environmental conditions, Municipal planning to prevent soil and water degradation: The case of Vilnius, In between water and fires: soil degradation in a new Mediterranean peri-urban landscape, and more. Additional chapters in this release include Groundwater in Venetian area, Soil protection and hydrogeological risk assessment. A strategic planning experience in Franciacorta, Data driven approach for assessing surface runoff in separated sewage systems: Israeli Case Study, Ecological status of urban streams and riparian habitats in the Czech Republic, Soil and water degradation in urban areas from western Romania, Mapping water ecosystem services: supply and demand in Stockholm, Land degradation and water availability in Ethiopia, and The study of land use and land cover changes in the Bekéscsaba area, Hungary. - Covers a wide breadth of emerging and state-of-the-art technologies - Includes contributions from an international board of authors - Provides a comprehensive set of reviews

Defining the Urban Deljana Iossifova, Christopher N.H Doll, Alexandros Gasparatos, 2017-10-06 What is urban? How can it be described and contextualised? How is it used in theory and practice? Urban processes feature in key international policy and practice discourses. They are at the core of research agendas across traditional academic disciplines and emerging interdisciplinary fields. However, the concept of the urban remains highly contested, both as material reality and imaginary construct. The urban remains imprecisely defined. Defining the Urban is an indispensable guide for the urban transdisciplinary thinker and practitioner. Parts I and II focus on how Academic Disciplines and Professional Practices,

respectively, understand and engage with the urban. Included, among others, are Architecture, Ecology, Governance and Sociology. Part III, Emerging Approaches, outlines how elements from theory and practice combine to form transdisciplinary tools and perspectives. Written by eminent experts in their respective fields, *Defining the Urban* provides a stepping stone for the development of a common language—a shared ontology—in the disjointed fields of urban research and practice. It is a comprehensive and accessible resource for anyone with an interest in understanding how urban scholars and practitioners can work together on this complex theme.

Urban Expansion, Land Cover and Soil Ecosystem Services **Ciro Gardi, 2017-04-07** More than half of the world population now lives in cities, and urban expansion continues as rural people move to cities. This results in the loss of land for other purposes, particularly soil for agriculture and drainage. This book presents a review of current knowledge of the extension and projected expansion of urban areas at a global scale. Focusing on the impact of the process of 'land take' on soil resources and the ecosystem services that they provide, it describes approaches and methodologies for detecting and measuring urban areas, based mainly on remote sensing, together with a review of models and projected data on urban expansion. The most innovative aspect includes an analysis of the drivers and especially the impacts of soil sealing and land take on ecosystem services, including agriculture and food security, biodiversity, hydrology, climate and landscape. Case studies of cities from Europe, China and Latin America are included. The aim is not only to present and analyse this important environmental challenge, but also to propose and discuss solutions for the limitation, mitigation and compensation of this process.

Planning and Design Perspectives for Land Take Containment Benedetta Giudice,2022-01-03 This book aims to provide a framework for the concept of land take, the practice by which natural lands are lost to artificial land development practices, and present its ecological implications in urban environments. In particular, the book intends to contextualize land take and its ecological implications in the field of planning through the analysis of the evolution of the relationship that exists between ecology and urban and regional planning, with case studies focusing on cities in Europe. Urban and regional planning (specifically in terms of tools, policies and strategies) play a central role in the redevelopment of this relationship, and through this perspective the text explores some operational criteria and guiding strategies for the creation of innovative scenarios of planning and design. The book is indeed mainly based upon an ecological planning-oriented perspective, with the attempt of creating a strong link between the plan and the project that will be useful for students, researchers, policy makers, and urban planners and designers.

We Did What?! Timothy B. Jay,2016-11-28 This provocative guide profiles behaviors considered shocking throughout American history, revealing the extent of changing social mores and cultural perceptions of appropriate conduct since the Colonial period. The notion of what is offensive has evolved over time. But what factors dictate decorum and why does it change? This fascinating work delves into the history of inappropriate behavior in the United States, providing an in-depth look at what has been considered improper conduct throughout American history—and how it came to be deemed as such. The detailed narrative considers the impact of religion, sexuality, popular culture, technology, and politics on social graces, and it features more than 150 entries on topics considered taboo in American cultural history. Organized alphabetically, topics include abortion, body odors, cannibalism, and voyeurism as well as modern-day examples like dumpster diving, breast feeding in public, and trolling. Each entry defines the behavior in question, provides an historical outline of the offensive behavior, and discusses its current status in American culture. Throughout the book, clear connections between offenses and social values illustrate the symbiotic relationship between popular opinion and acceptable behaviors of the time.

Smart Growth and Sustainable Transport in Cities Amir Shakibamanesh,Mahshid Ghorbanian,Seyed Navid Mashhadi Moghadam,2019-09-23 This book delves into the urban planning theory of “smart growth” to encourage the creation of smart cities, where compact urban spaces are optimized to create transit-oriented, pedestrian- and bicycle-friendly areas, with a clear focus on developing a sustainable, humanistic transport system. Over the last century, increased demographic changes and use of motor vehicles in the wake of “urbanization” led to the rapid expansion of cities, giving rise to economic, social and environmental problems. Sprawls and extension into natural areas caused a scattered urban context replete with empty spaces. This book provides an effective solution to this with an overview of the historical application of

smart growth principles as a response to the issue of sprawling cityscapes, and sheds light on the theoretical information and methodologies used by cities to re-develop the urban landscape. It also encloses a checklist for practitioners and decision makers to inform the developmental process and integrate smart growth strategies into land use planning. This book effectively engages with the global problem of urban sprawl in cities and hence will be an asset to both urban planning professionals, and graduate and postgraduate students of urban studies and the related disciplines.

Resilient and Responsible Smart Cities Hassan Abdalla, Hugo Rodrigues, Vimal Gahlot, Mohammad Salah Uddin, Tomohiro Fukuda, 2022-03-01 This book aims to establish a community with attention to land use to achieve sustainable development and meet the needs of today's society. Urban planning depends on engineering, architectural, social and political pillars. It pursues this by proposing solutions, regulating environmental pollution and non-sustainable use of available resources. It showcases and even triggers further debate about connections between sustainable development, urban planning and technology in hopes of achieving sustainable development models that sustain urban expansion and shape cities that improve the overall quality of life. It views urban planning and development as vital fields that ensure the application of revolutionary approaches with new materials and processes incorporated in the most efficient manner.

Population Geography K. Bruce Newbold, 2013-12-19 This compact and accessible text provides a comprehensive, issue-oriented introduction to population geography. After grounding students in the fundamentals, K. Bruce Newbold then explains the tools and techniques commonly used to describe and understand population concepts using real-world issues and events. Drawing on both US and international cases, he explores such pressing concerns as HIV/AIDS, international migration, fertility, mortality, resource scarcity, and conflict. Every chapter includes methods and focus sections, as well as study questions, to provide a more in-depth discussion of the ideas and concepts developed in the book. In addition, a wide array of maps, tables, and figures illustrates and enhances the cases. Newbold highlights the geographical perspective—with its ability to provide powerful insights and bridge disparate issues—by emphasizing the role of space and place, location, regional differences, and diffusion. Arguing that an understanding of population is essential to prepare for the future, this cogent text will provide upper-division undergraduates with a thorough grasp of the field.

Dictionary of Ecodesign Ken Yeang, Lillian Woo, 2010-04-05 This work is a guide to the terminology of sustainable design. Providing a unique resource for the practitioner and student, this book leaves the reader free to 'dip' in and out of the book allowing for 'bite-sized' learning at their own convenience.

Cellular Automata Samira El Yacoubi, 2006-09-19 This book constitutes the refereed proceedings of the 7th International Conference on Cellular Automata for Research and Industry, ACRI 2006. The book presents 53 revised full papers and 19 revised poster papers together with 6 invited lectures. Topical sections include CA theory and implementation, computational theory, population dynamics, physical modeling, urban, environmental and social modeling, traffic and

boolean networks, multi-agents and robotics, as well as crowds and cellular automata, and more.

Metropolitan Commuter Belt Tourism Michał Jacenty Sznajder, 2017-05-18 With the current rise of metropolitan regions as a present location and driver of the development of rural tourism, agritourism, food tourism and nature tourism, there is a need to analyse the major economic, social, political and managerial aspects of these types of tourism which occur within the rural-urban fringe. This book establishes a current inventory and appropriate future selection of commuter belt tourism products for metropolitan areas. It also explains how public and private resources can be combined to achieve synergistic effects in tourism promotion and provides a structural analysis for the proper management of tourist organisations in metropolitan areas. Additionally, there is insight into how the development of metropolitan areas affects rural tourism and agritourism within broader social, economic and environmental relations. The issue of the growth of metropolitan areas, which is a complex and multifaceted challenge, is elaborated on with diverse examples in Poland and further afield. This is valuable reading for students, researchers and academics of tourism, as well as rural and urban studies, business management, farm management, and leisure studies.

21st Century Anthropology: A Reference Handbook H. James Birx, 2010-06-10 Highlighting the most important topics, issues, questions and debates, these two volumes offer full coverage of major subthemes and subfields within the discipline of anthropology.

Mean Streets and Raging Bulls Richard Martin, 2000-01-01 Classic film noir was Hollywood's 'dark cinema' of crime and corruption; a genre underpinned by a tone of existential cynicism which stripped bare the myth of the American Dream and offered a bleak, nightmarish vision of a fragmented society that rhymed with many of the social realities of forties and fifties America. Mean Streets and Raging Bulls explores how, since its apparent demise in the late fifties, the noir genre has been revitalized during the post-studio era. The book is divided into two sections. In the first, the evolution of film noir is contextualized in relation to both American cinema's industrial transformation and the post-Depression history of the United States. In the second, the evolution of neo-noir and its relation to classic film noir is illustrated by detailed reference to representative texts including *Chinatown* (Roman Polanski, 1974), *Night Moves* (Arthur Penn, 1975), *Taxi Driver* (Martin Scorsese, 1976), *Blood Simple* (Joel and Ethan Coen, 1984), *After Hours* (Martin Scorsese, 1985), *Sea of Love* (Harold Becker, 1989), *Reservoir Dogs* (Quentin Tarantino, 1992), and *Romeo is Bleeding* (Peter Medak, 1994).
