Biology Teresa Audesirk, Gerald Audesirk, Bruce E. Byers, 2001 For one or two semester courses in Introductory Biology targeting non- and mixed majors. The goal of this text is to provide an engaging and easy to use book with an innovative and interactive media program. It achieves a unique balance in emphasizing concepts without sacrificing scientific accuracy. The new MediaTutor, found at the end of each chapter, integrates the text and media by providing a brief description of the CD or WEB activity and the time requirement for completion. In creating the book and the media package, the authors and Prentice Hall reached out to the biology community - involving educators from around the country to help address the diverse needs of today's students. How do you engage your students and help make biology relevant to them? *NEW - Chapter-opening Case Studies and chapter-ending Case Studies Revisited - Includes Did Dinosaurs Die from Lack of Sunlight? from the chapter on Photosynthesis and Teaching an Old Grain New Tricks from the chapter on Biotechnology. Bioquímica: estructura y función de biomoléculas Bacca, Cecilia, Roza, Claudia, Marcela, Adriana, Barrero, Lozano, 2009-12-15 Actualmente la educación superior, dentro del contexto de la globalización, se está orientando hacia el sistema de créditos en el que el trabajo autónomo e independiente del alumno es un aspecto fundamental para la formación académica y profesional. De acuerdo con lo anterior, las docentes de bioquímica del Departamento de Ciencias Básicas de la Facultad de Ciencias Naturales e Ingeniería de la Universidad de Bogotá Jorge Tadeo Lozano, diseñaron este cuadernillo para apoyar el trabajo independiente de los estudiantes de programas de educación superior en cuyo currículo se encuentre la asignatura de bioquímica.

Prácticas experimentales en textos universitarios Edwin Germán García Arteaga, Miyerdady Marín Quintero, Tatiana Iveth Salazar López, Edgar Andrés Espinosa Ríos, Henry Giovanny Cabrera Castillo, Lisbeth Lorena Alvarado Guzmán, 2024-08-08 La importancia de la Historia de las Ciencias en la formación de profesores permite superar la visión lineal y acumulativa que se tiene del conocimiento y considerar los procesos y las dinámicas sociales inherentes a la producción del conocimiento

científico teniendo en cuenta las problemáticas y contextos que lo involucran. En este sentido, la historia contextualizada de las prácticas experimentales se convierte en una herramienta importante para la enseñanza de las ciencias. Las prácticas experimentales son cada vez más visibles en los estudios sobre la Didáctica de las Ciencias, de una enseñanza de las ciencias basadas únicamente en el papel demostrativo del experimento para comprobar teorías, se ha pasado a una enseñanza que recupera el papel significativo de la práctica experimental en la construcción del conocimiento científico en el aula. Por su parte, los libros de texto utilizados a nivel universitario suelen ser considerados como guía para la formación de futuros profesionales; físicos, químicos y biólogos. Sin embargo, la investigación realizada pone en evidencia las dificultades de comunicación que se encuentra en ellos, tanto en su lenguaje lógico matemático, como en los experimentos propuestos; esto es, la retórica de los textos está orientada a reproducir contenidos y promover el aprendizaje por repetición y mecanización del conocimiento. En las páginas de este libro se encuentran los resultados del estudio realizado sobre el papel histórico de la experimentación en construcción del conocimiento científico en Física (electricidad) Química (reacción química) y Biología (genética). Así como la retórica de los textos universitarios y el papel de la práctica experimental que registra el tratamiento en dichos libros. Finalmente se recomienda la lectura de este el libro a investigadores en enseñanza de las ciencias, a docentes y estudiantes de ciencias naturales interesados en transformar sus prácticas en el aula, a los editores de libros universitarios para que consideren los aspectos importantes del desarrollo de la didáctica de las ciencias y al público en general preocupado por el significado del conocimiento científico.
