Estructuras. Hormigón armado Jorge Bernal,2021-06-01 Este trabajo es una actualización del libro Introducción a las Estructuras editado hace más de veinte años. Fue un tiempo suficiente para un libro técnico. En esas décadas se han modificado varios principios y teorías de las ciencias de la construcción, también las técnicas y las tecnologías utilizadas para la realización de las obras. Para completar este nuevo escenario han surgido nuevos materiales y otros mejoraron sus cualidades. Por todo ello hemos realizado una revisión del libro original para adaptarlo al actual estado de las ciencias y tecnologías que componen la disciplina de la construcción de los edificios.

MANUAL DE INSTALACIONES DE GAS 4ta EDICIÓN COLLAVINO SILVIA DEL VALLE,2025-01-27 En el desarrollo del texto, se realiza una descripción de las instalaciones de gas natural y envasado, introduciendo conceptos e información complementada con abundante material gráfico, de manera tal de agilizar su lectura y permitir una mejor comprensión de los temas tratados, incorporándose en esta edición planos con colores reglamentarios. En su elaboración se han tenido en cuenta las Reglamentaciones de la ex Gas del Estado, complementadas por la Resolución del ENARGAS (Ente Nacional Argentino de Gas) que pone en vigencia el Código Argentino de Gas, y que dicta Normas y especificaciones técnicas llamadas - NAG - (sigla de Norma Argentina de Gas). Se han considerado, asimismo, las especificaciones técnicas de los fabricantes de los distintos equipos y accesorios mencionados en el texto. Por último, a efectos de lograr una mejor comprensión de los conceptos vertidos en el texto, se han incluido diversos ejemplos, como así también se ha desarrollado el proyecto completo de una instalación, incluyendo su dimensionamiento y planos.

Manual de Aire Acondicionado y Ventilación Industrial 1 Jorge Serrano,2013-04-22 El Manual de Aire Acondicionado, en sus 4 tomos pretende orientar el conocimiento de la aplicación y uso del Aire Acondicionado para las instalaciones térmicas de verano e invierno. Los conceptos físicos elementales se consideran ya adquiridos en la formación técnica del lector. En

cuanto a la descripción de los componentes y equipos, se describen conceptualmente, profundizando en aquellos de mayor uso. La información contenida es de suma actualidad, y el análisis de carga térmica de verano está aplicado en relación a las últimas normas y datos de cálculo modificadas por I.R.A.M. en 2007 y según Normas ASHRAE. La experiencia profesional y pedagógica me ha permitido realizar por primera vez un desarrollo de cálculo de la carga térmica verano-invierno para la Argentina. Hasta ahora los sistemas de cálculo a disposición de los técnicos y profesionales contemplaban la aplicación de datos climáticos y de radiación solar para el hemisferio Norte y trasladados al hemisferio Sur por similitud. En el presente trabajo se han tomado los valores reales de temperatura y radiación de 118 estaciones meteorológicas de la Argentina y 30 estaciones de otros países. Se ha consultado toda la bibliografía disponible, y las últimas novedades técnicas introducidas en instalaciones térmicas. Como será del conocimiento del lector, de todos los componentes de la obra arquitectónica, (estructuras, fundaciones, cerramientos, carpinterías, solados, revestimientos, etc.), las instalaciones en general constituyen el rubro donde en los últimos años, se han incorporado mayores innovaciones tecnológicas, desde el perfeccionamiento en la fabricación sistemática y robotizada, hasta el uso de ordenadores para el cálculo y secuencia controlada de funcionamiento.

Recursos para el diseño de estructuras resistentes. Tomo 2 Mario Enrique Castro, Marissa A. Battaglia, 2021-06-17 Esta obra incluye los principios teóricos, disposiciones reglamentarias actuales y procedimientos relacionados con lo que es indispensable para tratar la problemática de las estructuras resistentes, sean estas metálicas, de madera o de hormigón y se funda en la Parte 1 de esta publicación. Se trata la obtención de esfuerzos y se diseñan secciones de elementos estructurales para las distintas sollicitaciones que derivan de la Resistencia de Materiales y la Verificación de la Seguridad por Pandeo, abarcando el estudio y cuantificación de las deformaciones de flexión. Se presentan alternativas de resolución de Sistemas Hiperestáticos desplazables e indesplazables. Además, se expone una introducción a temas como la problemática de la edificación en altura, el comportamiento básico de cables y arcos, y el diseño de los medios de unión clásicos. Sus

aplicaciones permiten una aproximación a los criterios para el diseño de secciones, basado en disposiciones LRFD Load and Resistance Factor Design. Incluye las expresiones de diseño necesarias para las consideraciones preliminares y una primera definición de resultados, sin ser su objetivo la profundización de cada una de las derivaciones que implica las distintas tecnologías que corresponden a cada material y las combinaciones resultantes entre comportamiento de los distintos y variados elementos y la totalidad de disposiciones reglamentarias vigentes.

¿Para qué miden los niños en el nivel inicial? Alicia Giarizzo, 2020-04-01 En este libro, destinado a estudiantes, docentes, directivos, supervisores y especialistas en la enseñanza de la matemática en el Nivel Inicial, se abordan problemas en torno al aprendizaje de contenidos vinculados a la medida de longitudes, capacidades, pesos y tiempos. Se desarrolla una breve reseña histórica sobre los sistemas de medida empleados por diferentes civilizaciones y luego se analizan planificaciones didácticas desde las anticipaciones de lo que el docente prevé enseñar hasta las decisiones que concretiza frente a la reflexión de su práctica en la sala. Estas observaciones encuentran fundamento en los aportes teóricos que complementan los conceptos, los procedimientos, el vocabulario y la selección y/o construcción de los instrumentos de medida no convencionales o convencionales utilizados. Se consideran también propuestas de enseñanza para articular los contenidos de las diferentes magnitudes según las particularidades de los niños que asisten a las salas de 3, de 4 y de 5 años.

Físico Química 2 Renée Cesar Magnetti, El presente trabajo fue elaborado a partir de los contenidos curriculares emanados de las autoridades educativas, teniendo en cuenta que la Nueva Ley de Educación Nacional (Nº: 26.206) y la Ley de Educación Provincial (Nº: 13.688) fija como uno de los principios básicos mejorar la calidad de la enseñanza. Los profesores de física y química, (obviamente también otros), sabemos que nuestro espacio curricular permite elaborar propuestas áulicas partiendo de fenómenos concretos, que estando al alcance de los alumnos, los introduce al pensamiento

reflexivo y a una actitud crítica. No pretendemos, menos aún a esa edad, que los jóvenes, terminen sus estudios siendo físicos o químicos, sólo queremos lograr un “ser pensante”. Los avances intelectuales se logran mediante la investigación, el redescubrimiento y la elaboración del conocimiento significativo, para que el adolescente enfrente los hechos de la vida diaria con la seguridad de que sus aportes pueden enriquecer la problemática encarada. Para que el alumno pueda “entender e internalizar” los diferentes temas, cada capítulo se inicia a partir de cuestiones simples de hechos reales y sobre esa base, que permite la adquisición de los conceptos previos, se elabora la secuencia priorizando la resolución de cuestionarios, problemas y la realización por parte del alumno de trabajos prácticos que le permiten al joven vivenciar el fenómeno. Recordar que a esa edad se “aprende haciendo, se asimila lo que se ve y se cree cuando se hace”.

Gobernar la educación Axel Rivas, 2004

Diseño de cargas en edificios Jorge Bernal, 2021-05-19 La primera tarea del proyectista en el diseño de las estructuras de un edificio es el estudio y cálculo de las cargas que actuarán sobre el mismo. Ese estudio es un pronóstico porque se determinan cargas y acciones que se presentarán a futuro; allí reside la complejidad del trabajo. El reglamento del Área 100 es un documento dinámico en permanente actualización y estudio, es por ello que su formato y organización interna contiene varias partes que dificultan su lectura y aplicación. La parte principal es el Reglamento que es ampliado por los Comentarios. En muchas series existen Anexos y en otros Apéndices como partes accesorias dependientes.
