The Urbanism of Metabolism Raffaele Pernice, 2022-03-16 This edited book explores and promotes reflection on how the lessons of Metabolism experience can inform current debate on city making and future practice in architectural design and urban planning. More than sixty years after the Metabolist manifesto was published, the author's original contributions highlight the persistent links between present and past that can help to re-imagine new urban futures as well as the design of innovative intra-urban relationships and spaces. The essays are written by experienced scholars and renowned academics from Japan, Australia, Europe, South Korea and the United States and expose Metabolism's special merits in promoting new urban models and evaluate the current legacy of its architectural projects and urban design lessons. They offer a critical, intellectual, and up-to-date account of the Metabolism projects and ideas with regard to the current evolution of architectural and urbanism discourse in a global context. The collection of cross-disciplinary contributions in this volume will be of great interest to architects, architectural and urban historians, as well as academics, scholars and students in built environment disciplines and Japanese cultural studies.

Die Freie Universität Berlin (1967-1973) / The Free University Berlin (1967 - 1973) Karl Kiem, 2008-06-25 Das Gebäude der Freien Universität Berlin (Candilis, Josic, Woods, Schiedhelm, 1963-73) ist ein bahnbrechendes Werk in der Tradition der heroischen Moderne. Dieses wird in der vorliegenden Untersuchung anhand einer Fülle bisher unpublizierten Quellenmaterials zum ersten Mal umfassend untersucht. So werden nicht nur die bei diesem Gebäude umgesetzten technischen Innovationen, sein utopischer Charakter und sein Einfluss auf die internationale Entwicklung im Hochschulbau der sechziger Jahre des zwanzigsten Jahrhunderts untersucht, sondern auch die (personellen, politischen und mentalen) Ursachen für die Vielzahl der technischen Probleme, die die Ausführung des Gebäudes kompromittierten und schließlich einen dunklen Schatten auf seine Reputation legten. Das in jüngster Zeit wiedererwachte Interesse an der FU Berlin und den Architekten Candilis, Josic, Woods und Schiedhelm zeigt, wie die Relevanz dieses Gebäudes mit seiner kompakten Synthese von komplexer Konzeption und tektonischer Innovation in Verbindung mit differenzierten baugeschichtlichen Bezügen

jenseits von nostalgischen Formen für Architekten, Lehrende, Studenten und Theoretiker fort dauert.

Beyond Utopia Agnes Nyilas, 2018-05-25 Megastructure proposals by the Japanese Metabolism group are commonly identified with the concept of utopia. Beyond this partial understanding, Agnes Nyilas suggests that rather than being merely utopian, the Megastructure of Metabolism represents a uniquely amalgam genre: the myth camouflaged as utopia. Although its Megastructure seemingly describes a desirable future condition as utopia does, it also comprises certain cultural images rooted in the collective (un)conscious of Japanese people, in accordance with the general interpretation of myth. The primary narrative of *Beyond Utopia* thus follows the gradual unfolding of the myth-like characteristics of its Megastructure. Myth is dealt here as an interdisciplinary subject in line with contemporary myth theories. After expounding the mechanism underlying the growing demand for a new myth in architecture (the origin of the myth), Part I discovers the formal characteristics of the Megastructure of Metabolism to give a hint of the real intention behind it. Based on this, Part II is a reexamination of their design methods, which aims to clarify the function of the myth and to suggest the meaning behind it. Finally, Part III deals with the subject matter of the myth by disclosing the meaning unfolding in the story, and suggests a new reading of Metabolism urban theory: as an attempt to reconsider the traditional Japanese space concept.

Design for Health Arif Hasan, Christian Benimana, Mette Ramsgaard Thomsen, Martin Tamke, 2023-09-12 The book provides new perspectives from leading researchers accentuating and examining the central role of the built environment in conceiving and implementing multifaceted solutions to the complex challenges of physical and mental health, revealing critical potentials for architecture and design to contribute in more informed and long-term ways to the urgent transition of our society. The volume book offers a compilation of peer-reviewed papers that uniquely connects knowledge and criticality broadly across practice and academia; from new technologies, theories, and methods to community -engaged practice on many scales, and more. The book is part of a series of six volumes that explore the agency of the built environment in relation to the SDGs through new research conducted by leading researchers. The series is led by editors Mette Ramsgaard Thomsen

and Martin Tamke in collaboration with the theme editors: - Design for Climate Adaptation: Billie Faircloth and Maibritt Pedersen Zari - Design for Rethinking Resources: Carlo Ratti and Mette Ramsgaard Thomsen (Eds.) - Design for Resilient Communities: Anna Rubbo and Juan Du (Eds.) - Design for Health: Arif Hasan and Christian Benimana (Eds.) - Design for Inclusivity: Magda Mostafa and Ruth Baumeister (Eds.) - Design for Partnerships for Change: Sandi Hilal and Merve Bedir (Eds.)

Utopia(s) - Worlds and Frontiers of the Imaginary Maria Rosário Monteiro, Mário Ming Kong, Maria João Pereira Neto, 2016-11-03 The idea of Utopia springs from a natural desire of transformation, of evolution pertaining to humankind and, therefore, one can find expressions of “utopian” desire in every civilization. Having to do explicitly with human condition, Utopia accompanies closely cultural evolution, almost as a symbiotic organism. Maintaining its roots deeply attached to ancient myths, utopian expression followed, and sometimes preceded cultural transformation. Through the next almost five hundred pages (virtually one for each year since Utopia was published) researchers in the fields of Architecture and Urbanism, Arts and Humanities present the results of their studies within the different areas of expertise under the umbrella of Utopia. Past, present, and future come together in one book. They do not offer their readers any golden key. Many questions will remain unanswered, as they should. The texts presented in *Proportion Harmonies and Identities - UTOPIA(S) WORLDS AND FRONTIERS OF THE IMAGINARY* were compiled with the intent to establish a platform for the presentation, interaction and dissemination of researches. It aims also to foster the awareness and discussion on the topics of Harmony and Proportion with a focus on different utopian visions and readings relevant to the arts, sciences and humanities and their importance and benefits for the community at large.

Megastructure Reyner Banham, 2020-06-16 A long-sought reprint of this classic of architectural history and criticism, surveying a movement that would inspire architects, fantasists, and filmmakers alike. It is an architectural concept as alluring as it is elusive, as futuristic as it is primordial. Megastructure is what it sounds like: a vastly scaled edifice that can contain potentially countless uses, contexts, and adaptations. Theorized and briefly experimented with in built form in the 1960s, megastructures almost as quickly went out of fashion in the profession. But Reyner Banham's 1976 book compiled the origin stories and ongoing mythos of this visionary movement, seeking to chart its lively rise, rapid fall, and ongoing meaning. Now back in print after decades and with original editions fetching well over \$100 on the secondary market, *Megastructure: Urban Futures of the Recent Past* is part of the recent surge in attention to this quixotic form, of which some examples were built but to this day remains--decades after its codification--more of a poetic idea than a real architectural type. Banham, among the most gifted and incisive architectural critics and historians of his time, sought connections between theoretical origins in Le Corbusier's more starry-eyed drawings to the flurry of theories by the Japanese Metabolist architects, to less intentional examples in military architecture, industry, infrastructure, and the emerging instances in pop

culture and art. Had he written the book a few years later he would find an abundance of examples in speculative art and science fiction cinema, mediums where it continues to provoke wonder to this day. A long-sought study by an author who combined imagination, wit, and pioneering scholarship, the republication of *Megastructure* is an opportunity for scholars and laypeople alike to return to the origins of this fantastic urban idea.

City, Climate, and Architecture Sascha Roesler, 2025-01-27 Second and revised edition The publication rethinks climate control – a key concern of the discipline of architecture – through the lens of city climate phenomena over the course of the 20th century. Based on a history of climate control on urban scales, it promotes the integration of indoors and outdoors in order to reduce environmental and thermal loads in cities. Just as heating and cooling practices inside the buildings are affecting the (urban) climate outdoors, urban heat islands are influencing the energy requirements and thermal conditions inside the buildings. While the first part of the book focuses on the interwar period in Europe, the publication's second part considers examples from all over the globe, tracing the growing significance of ecological thinking for the design of urban environments. Main outcome of a six-years research project on architecture and urban climate funded by the Swiss National Science Foundation New and revised edition KLIMA POLIS: a series highlighting design-driven approaches to urban climates across the globe

Reinventing Modern Architecture in Greece Marianna Charitonidou, 2025-05-30 This book examines the connection between the politics of the Marshall Plan and urban planning and identifies the key players, such as the Greek architect and urban planner Constantinos A. Doxiadis and the Italian industrialist Adriano Olivetti. It also explores the architects of the Mataroa mission, who played a vital role in the cross-fertilisation between France and Greece, and the role of travel to Greece for architects during the 19th century. This book delves into the work of Constantinos A. Doxiadis, Adriano Olivetti, Alison and Peter Smithson, Iannis Xenakis, Takis Zenetos, Henri Lefebvre, Cornelius Castoriadis, Aris Konstantinidis, Dimitris Pikionis and others. It sheds light on how Doxiadis introduced “ekistics” as a novel approach to understanding the science of human settlements. This book proposes that the manner in which these aforementioned architects and urban planners addressed the role of technology in everyday life and the relationship between society, history, culture, nature, architecture and urban planning could enrich our ongoing methods and debates on architecture, urban planning, ecology, social equity and democracy. This book is based on extensive archival research and will be of interest to architects, artists, researchers and students and scholars in architecture, architectural history and theory, art, urban sociology, cultural theory, science and technology studies, philosophy, ecology, cybernetics and aesthetics.

The Condition of Chinese Architecture Pier Alessio Rizzardi, Zhang Hankun, 2018 In China, 1% of the world's architects have to design 50% of all the buildings and must do so for 15% of the profit. This extreme situation in which architects have to operate, design and build, creates the theoretical basis for 'The Condition of Chinese Architecture'. In addition to

interviewing the critical voices of contemporary Chinese architecture, the authors report the nowadays reality of the country, the architectural evolution since the first contacts with the West in 1582 and the issues affecting its contemporary practice. The result is a groundbreaking, cumulative reckoning teased out through layers of personal accounts and cross-disciplinary research, drawing on architecture, aesthetics, philosophy, politics, and society. © 2018 TCA Think Tank thinktank.com'The Condition of Chinese Architecture' Pier Alessio Rizzardi Zhang Hankun Contributing Authors Li Xiangning Harry den Hartog Rory Stott Charlie Q. Contemporary Japanese Architecture James Steele, 2017-03-16 Contemporary Japanese Architecture presents a clear and comprehensive overview of the historical and cultural framework that informs the work of all Japanese architects, as an introduction to an in-depth investigation of the challenges now occupying the contemporary designers who will be the leaders of the next generation. It separates out the young generation of Japanese architects from the crowded, distinguished, multi-generational field they seek to join, and investigates the topics that absorb them, and the critical issues they face within the new economic reality of Japan and a shifting global order. Salient points in the text are illustrated by beautiful, descriptive images provided by the architects and from the extensive collection of the author. By combining illustrations with timelines and graphics to explain complex ideas, the book is accessible to any student seeking to understand contemporary Japanese architecture.

New Worlds: Colonizing Planets, Moons and Beyond Dan Răzvan Popoviciu, 2023-03-31 Terraforming is the process of modifying a planet, moon, or other body to a more habitable atmosphere, temperature, or ecology. The idea of terraforming or colonizing other planets has recently become a topic of intense scientific interest and public debate. Geoengineering and terraforming, at their core, have the same goal: to enhance or revive the ability of a specific environment to support human life, society, and industry. *New Worlds: Colonizing Planets, Moons and Beyond* examines extraterrestrial colonization plans with a critical eye. The ten chapters of the book provide a detailed review of the demographic and economic reasons behind this space imperative, technical and ecological solutions to improve the settlement of our own planet, enhancements of our current space industry. The book also covers interesting topics such as the terraformation of Mars, the moon, and other planets like Venus, colonizing the outer solar system (and beyond), and the ethical considerations in favor of space expansion. This simple, yet informative treatise is an essential read for anyone interested in the subject of space colonization.

Autonomous Assembly Skylar Tibbits, 2018-02-05 We are now on the brink of a new era in construction – that of autonomous assembly. For some time, the widespread adoption of robotic and digital fabrication technologies has made it possible for architects and academic researchers to design non-standard, highly customised structures. These technologies have largely been limited by scalability, focusing mainly on top-down, bespoke fabrication projects, such as experimental pavilions and structures. Autonomous assembly and bottom-up construction techniques hold the promise of greater scalability, adaptability and potentially evolved design possibilities. By capitalising on the advances made in swarm robotics, the collective construction of the animal/insect kingdom, and advances in physical computational, programmable materials or self-assembly, architects and designers are now able to build from the bottom up. This issue presents future scenarios of autonomous assembly by highlighting the viability of decentralised, collective assembly systems, demonstrating the potential to deliver reconfigurable and adaptive solutions. Contributors include: Marcelo Coelho, Andong Liu, Robin Meier, Kieran Murphy and Heinrich Jaeger, Radhika Nagpal and Kirstin Petersen, and Zorana Zeravcic. Featured architects: Aranda\Lasch, Arup, Philippe Block, Gramazio Kohler Architects, Ibañez Kim, Achim Menges, Caitlin Mueller, Jose Sanchez, Athina Papadopoulou and Jared Laucks, and Skylar Tibbits.

Cities of Tomorrow Carlo Aiello, 2013-01-01 How do we imagine the cities of tomorrow? This is one of the most difficult questions that architects, designers, and urban planners need to answer in a time where more than half of the world's population lives in urban settlements – a mere century ago only ten percent did. *Cities of Tomorrow* examines innovative urban proposals that will transform the way we live; projects that preserve the natural landscape with integral architecture and urbanism with deep connections to site, culture, and environment. These are concepts of hybrid urbanism that offer a juxtaposition of programs to live, work, and play for a hyper-mobile population.

Kenzo Tange and the Metabolist Movement Zhongjie Lin, 2010-02-25 Metabolism, the Japanese architectural avant-garde movement of the 1960s, profoundly influenced contemporary architecture and urbanism. This book focuses on the Metabolists' utopian concept of the city and investigates the design and political implications of their visionary planning in the postwar society. At the root of the group's urban utopias was a particular biotechnical notion of the city as an organic process. It stood in opposition to the Modernist view of city design and led to such radical design concepts as marine civilization and artificial terrains, which embodied the metabolists' ideals of social change. Tracing the evolution of Metabolism from its inception at the 1960 World Design Conference to its spectacular swansong at the Osaka World Exposition in 1970, this book situates Metabolism in the context of Japan's mass urban reconstruction, economic miracle, and socio-political reorientation. This new study will interest architectural and urban historians, architects and all those interested in avant-garde design and Japanese architecture.

Cities for Smart Environmental and Energy Futures Stamatina Th. Rassia, Panos M. Pardalos, 2013-08-15 Cities for

Smart Environmental and Energy Futures presents works written by eminent international experts from a variety of disciplines including architecture, engineering and related fields. Due to the ever-increasing focus on sustainable technologies, alternative energy sources, and global social and urban issues, interest in the energy systems for cities of the future has grown in a wealth of disciplines. Some of the special features of this book include new findings on the city of the future from the macro to the micro level. These range from urban sustainability to indoor urbanism, and from strategies for cities and global climate change to material properties. The book is intended for graduate students and researchers active in architecture, engineering, the social and computational sciences, building physics and related fields.

City Design Jonathan Barnett, 2016-01-08 City Design describes the history and current practice of the four most widely accepted approaches to city design: the Modernist city of towers and highways that, beginning in the 1920s, has come to dominate urban development worldwide but is criticized as mechanical and soul-less; the Traditional organization of cities as streets and public places, scorned by the modernists, but being revived today for its human scale; Green city design, whose history can be traced back thousands of years in Asia, but is becoming increasingly important everywhere as sustainability and the preservation of the planet are recognized as basic issues, and finally Systems city design, which includes infrastructure and development regulation but also includes computer aided techniques which give designers new tools for managing the complexity of cities. This new, revised edition of City Design includes a larger format and improved interior design allowing for better image quality. The author has also included wider global coverage and context with more international examples throughout, as well as new coverage on designing for informal settlements and new research conclusions about the immediacy of sea level rise and other climate change issues that affect cities, which sharpen the need for design measures discussed in the book. Authoritative yet accessible, City Design covers complicated issues of theory and practice, and its approach is objective and inclusive. This is a comprehensive text on city design ideal for planners, landscape architects, urban designers and those who want to understand how to improve cities.

Post-Western Histories of Architecture Pilar Maria Guerrieri, Marco Biraghi, 2023-06-23 This book seeks to provide an alternative post-Western perspective to the history of contemporary architecture. It puts forward detailed critical analyses of various areas of the world, including Europe, Latin America, Africa, China, Australia, India and Japan, where particular movements of architecture have developed as active 'political acts'. The authors focus on a broad spectrum of countries, architectures and architects that have developed a design approach closely linked to the building context. The concept of context is broad and includes various economic, social, cultural, political and natural aspects. In all cases, the architects selected in this book have chosen to view context as an opportunity. However, each architect has considered certain specific aspects of context: some have been very attentive to the social context, others to material aspects or typological issues, and still others to aspects related to political visions or economic factors. The analysis critically highlights interesting, creative

and respectful design approaches towards local conditions, such as sustainability in Nordic Europe, climate-conscious design in Africa, and the 'bottom-up' sensitivity of India. The book's main aim is to retrace, through both theoretical arguments and case studies, the debate that focuses on politics and the environment. Thanks to its valuable examples, this book strives to make a conscious contribution to establishing a bulwark against the current 'flattening-out' processes that architecture is experiencing. This book will be of relevance to researchers, teachers and students interested in the history of architecture, architecture and planning, and postcolonial studies.

Future City Jane Alison, Barbican Art Gallery, 2007 For millennia, architects and builders have attempted to rationalize cities into well-functioning and liveable places. While many aspects of a city evolve naturally, other facets result from human interventions and radical imagination. Future City celebrates the visionary urban schemes that have preoccupied architects trying to create a better world from the 1950s to the present. This ambitious publication assembles several generations of utopian architecture in a single volume. With the city serving as the context and catalyst for the works, the book provides an indispensable resource for contemporary architectural and urban development and innovation in the third millennium.
