Emily M. Homer

Feeding Therapy: A Sensory Motor Approach (2 Day). Lori Overland, 2014

A Sensory Motor Approach to Feeding Lori L. Overland, Robyn Merkel-Walsh, 2013 Children who refuse foods, or are not gaining weight are often referred to our offices for a feeding consult. Well-meaning parents and therapists have given children food they do not have the sensory-motor skills to handle. They have not gone through the typical development of oral sensory-motor skills due to medical issues, postural issues, tone issues, or sensory processing issues. Their compensatory motor skills are not adequate to handle the foods they are offered. They have had scary experiences with food, and have reacted with fright, fight, flight mode. For many of these clients food refusal is not behavioral, it is adaptive. -Back cover.

Feeding Therapy Lori Overland, 2010 His up to date self-study DVD explores and explains the complex issues surrounding feeding disorders. Offers a comprehensive explanation of sensory processing and the impact on feeding. Pre-feeding exercises designed to develop the motor skills for safe, effective, nutritive feeding and therapeutic feeding techniques are targeted. The class includes two live evaluations and program plans.

Your Baby Can Self-Feed, Too: Adapted Baby-Led Weaning for Children with Developmental Delays or Other Feeding Challenges (The Authoritative Baby-Led Weaning Series) Jill Rabin, Gill Rapley, 2022-08-30 No matter what challenges they face, your baby can self-feed, too! One in four children has feeding challenges and difficulty eating. If your child is one of them, mealtimes may be a struggle. Whether the reason is neurodiversity (such as Down syndrome), feeding aversion, or a medical condition, feeding therapist Jill Rabin and baby-led weaning pioneer Gill Rapley are here to help with a groundbreaking new approach for parents, caregivers, and health professionals alike: adapted baby-led weaning (ABLW). Find out how to: Respond to your baby's signals and appetite—and trust their abilities. Improve your baby's chewing, posture, sensory development, and fine motor skills. Use “bridge devices,” like silicone feeders, to encourage independent eating. Support your baby to eat real, healthy food and enjoy mealtimes with the rest of the family.

Management of Swallowing and Feeding Disorders in Schools Emily M. Homer, 2015-11-02 Management of Swallowing and Feeding Disorders in Schools examines the most significant issues in swallowing and feeding facing school-based speech-language pathologists (SLPs). Topics addressed are unique to the school setting, ranging from organizing a team procedure

in a district to serving children with complex medical issues, behavioral feeding disorders, and neurological feeding disorders. Ethical, legal, and cultural issues are also addressed. Many students in school districts across the country exhibit the signs and symptoms of dysphagia, and children who were originally treated for dysphagia in hospitals and other settings often begin attending public schools at three years old. The difficulty they had with swallowing and feeding frequently follows them to the school setting. Further, there are many students who develop swallowing and feeding disorders as a result of traumatic brain injury, neurological disorders and syndromes, behavioral disorders, and so forth. The range of students needing services for swallowing and feeding disorders in the school setting can be from three to twenty-two years of age and from mild dysphagia to tube feeding. The identification and treatment of swallowing and feeding disorders in schools is relatively new. There are still many districts in the country and internationally that do not address the needs of children with dysphagia. As school-based SLPs take on the challenge of this population there is a need for information that is current, accurate, and thorough. University programs include very little training, if any, at this time in the area of swallowing and feeding in the school setting. This text is appropriate for both a dysphagia course as well as courses that train SLP students to work with school-aged students.

Pseudoscience in Child and Adolescent Psychotherapy Stephen Hupp, 2019-03-07 Investigates questionable, ineffective, and harmful mental health treatments for children and adolescents.

Handbook of Behavior, Food and Nutrition Victor R. Preedy, Ronald Ross Watson, Colin R. Martin, 2011-04-15 This book disseminates current information pertaining to the modulatory effects of foods and other food substances on behavior and neurological pathways and, importantly, vice versa. This ranges from the neuroendocrine control of eating to the effects

of life-threatening disease on eating behavior. The importance of this contribution to the scientific literature lies in the fact that food and eating are an essential component of cultural heritage but the effects of perturbations in the food/cognitive axis can be profound. The complex interrelationship between neuropsychological processing, diet, and behavioral outcome is explored within the context of the most contemporary psychobiological research in the area. This comprehensive psychobiology- and pathology-themed text examines the broad spectrum of diet, behavioral, and neuropsychological interactions from normative function to occurrences of severe and enduring psychopathological processes.

Early Childhood Intervention Christina J. Groark, Steven M. Eidelman, Susan Maude, Louise Kaczmarek, 2011-07-22
This eye-opening set looks at young children with special needs, their families, and the laws, policies, programs, and services designed to help them. The three-volume *Early Childhood Intervention: Shaping the Future for Children with Special Needs and Their Families* is a unique, comprehensive, and much-needed examination of a critically important issue. In its pages, a diverse array of experts discuss key aspects of policies, laws, rights, programs, and services available to children today. Examinations range from historical roots to present-day considerations, such as culturally and linguistically diverse children, use of technology, and contemporary testing and teaching methods. Throughout, the most current and best available research is combined with professional and clinical experience, wisdom, values, and family perspectives. The work explores issues affecting both children with psychological disorders and those with physical challenges, such as children who are blind or hearing impaired. Coverage includes all aspects of life-skills, medicine, health sciences, education, and child welfare. Although it is focused on programs in the United States, this comprehensive set offers additional insights by including comparisons of U.S. programs and services with their international counterparts.
