La reflexión sobre la práctica del docente de Ciencias Naturales. Fundamentos teóricos y actividades didácticas para profesores y alumnos. María Ruina,2022-03-02 La teoría en sí misma no transforma el mundo. Puede

contribuir para su transformación, pero para eso tiene que salirse de sí misma y tiene que ser asimilada y reelaborada por aquellos que van a causar con sus acciones reales y efectivas esa transformación¹. (Paulo Freire, 1970) Indudablemente, el ejercicio de una actitud crítica y fundamentada durante la formación del profesorado brinda mejores oportunidades a los futuros docentes para afrontar los retos que propone la sociedad actual. En este sentido, adherimos fuertemente a la postura de Giroux (citado por Da Silva, 2001) cuando concibe al docente como un intelectual transformador, esto es, alguien que no se conduce como un técnico o un burócrata, sino como una persona comprometida, crítica y cuestionadora frente a los temas que tienen que ver con la enseñanza de su disciplina/área. Sin embargo, en la realidad existe una gran distancia entre esta postura y lo que llevan a cabo los docentes en sus clases. Antonio Gutiérrez (2009) asevera que, en la actualidad, los modelos didácticos predominantes en las clases de Ciencias Naturales, se corresponden con las perspectivas más tradicionales de la enseñanza, que ponen el acento en la adquisición del vocabulario científico. En forma paralela, durante la formación docente se prioriza el dominio del conocimiento propio de las disciplinas, que, en el caso de las Ciencias Naturales, son los que corresponden a la Biología, la Física y la Química y en menor grado, los vinculados con las Ciencias de la Tierra. Dentro de este encuadre los saberes didácticos, metodológicos, epistemológicos, históricos, etc. quedan relegados a un segundo plano. Consecuentemente, disminuyen también las posibilidades de reflexionar sobre sus propias prácticas y de pensar en maneras de superarlas. El autor plantea la necesidad de brindar espacios para que los futuros docentes puedan tomar decisiones frente a los problemas que plantean las situaciones particulares de su práctica a efectos de contribuir al desarrollo de su autonomía. A partir de este punto de vista, propone la siguiente definición para referirse a lo que significa enseñar: Enseñar constituye un complejo proceso de ponderación de situaciones concretas de trabajo y de toma de decisiones en torno a las mejores estrategias que posibiliten, en esas situaciones concretas, que los alumnos se apropien de los contenidos propuestos en el curriculum escolar (Gutiérrez, 2009, p.141) Coincidimos plenamente con el autor cuando afirma que ser experto en una disciplina no equivale a ser experto en su enseñanza (p.141). Desde esta perspectiva cabe plantearse qué es lo que un docente de ciencias debería aprender durante su formación inicial y continua. Desde nuestra experiencia y atendiendo a las múltiples publicaciones referidas a esta cuestión, estimamos que en las planificaciones del profesor que se desempeña tanto en el Nivel Superior cuanto en las instancias de formación continua (capacitación/actualización docente) deberían estar presentes, entre otros, los siguientes tópicos: el conocimiento específico sobre el área curricular y sus vinculaciones con otros campos de conocimiento, la enseñanza de una imagen de la ciencia influida por la Tecnología, el contexto social, religioso, económico, político, etc., los fundamentos de la Didáctica general y específica para argumentar su práctica, la resolución de problemas vinculados con el mundo real, el abordaje de los contenidos desde una organización interdisciplinaria o interareal y el desarrollo de habilidades para comunicarse en ambientes laborales crecientemente tecnificados.

Currículo en Ciencias Naturales. Inés Andrea Sanabria Totaitive, Claudia Patricia Moreno Cely, Thiago Henrique Barnabé Corrêa, Bruno Dos Santos Pastoriza, Rafael Eduardo Sánchez Cuervo, Edelmira Ochoa Camacho, Cristian Andrés Sanabria Hurtado, Angie Viviana Arango Martínez, Liby Saray Sandoval Gutiérrez, Hander Albeiro Molina López, Lina María Pineda Castro, Karen Tatiana Molina Suárez, Alirio Severo Hernández Severo, 2021-05-04 El libro que aquí se presenta tiene aportes fundamentales en la construcción del currículo en ciencias naturales, una reflexión que dinamiza los elementos de las ciencias y los relaciona con experiencias que muestran el contexto real en la enseñanza y aprendizaje, además da una visión fresca del desarrollo en los últimos años, de investigaciones formativas y de orden estructural guiadas primero, a la formación y actualización constante del profesorado y segundo, a las reflexiones de la enseñanza de las ciencias. Es importante resaltar que todas las conclusiones que allí suscitan parten de la experiencia de investigadores de diferentes contextos educativos, centralizando los esfuerzos en la actualización de un currículo que tienda a la flexibilización y que genere espacios de encuentro real con la ciencia. En este sentido, los capítulos del libro están organizados en tres partes: tendencias, intersticios y posibilidades, los cuales presenta la exploración, observación, planteamientos y definiciones de acciones a desarrollar con el fin de realimentar desafíos que se vislumbran en los diversos contextos. Abstract The book presented here, has fundamental contributions to the construction of the curriculum in natural sciences. A reflection that energizes the elements of science and relates them to experiences that show the real context in teaching and learning, as well as giving a fresh vision of development in recent years, formative and structural research guided first, to the training and constant updating of teachers and second, to the reflections of science teaching. It is important to highlight that all the conclusions that arise there are based on the experience of researchers from different educational contexts, centralizing efforts in updating a curriculum that tends to be more flexible and that generates spaces for real encounters with science. In this sense, the chapters in the book are organized into three parts: trends, interstices and possibilities, which present the exploration, observation, approaches and definitions of actions to be developed in order to respond to challenges that are seen in the various contexts.

Análisis de indicadores de ciencia y tecnología Pardo Martínez, Clara Ines, Lucio Arias, Diana, 2016-10-20 Esta obra analiza el atemporal conflicto entre los contribuyentes y las administraciones fiscales sobre los límites de la legítima planeación tributaria y las conductas elusivas, en el marco de la cláusula general antiabuso incorporada por Ley 1607 de 2012. En este análisis se desarrollan los conflictos entre principios jurídicos cardinales para el derecho tributario y se abordan conceptos que han pretendido delimitar esa sinuosa frontera, incluyendo las teorías importadas desde el derecho privado y los desarrollos logrados a partir del análisis económico, para facilitar al lector el análisis de los antecedentes doctrinales y jurisprudenciales del contexto colombiano. Se desarrollan los elementos configurativos y las condiciones de realización de abuso de acuerdo con la norma colombiana, junto con las facultades extraordinarias concedidas a la

administración fiscal, para recharacterizar las operaciones fraudulentas y concluir sobre su aplicabilidad práctica.
