Ciencias Naturales ,1957

Ciencias Naturales Ana María Espinoza,Adriana Casamajor,2023-04-05 Un manual 100% actualizado con lo que los docentes necesitan saber sobre la enseñanza de Ciencias Naturales, escrito por dos especialistas con amplísima experiencia. 26 preguntas clave que de forma breve, clara y sólida dan cuenta de los aspectos esenciales de cómo enseñar los contenidos del área, los experimentos, las situaciones de lectura, escritura y representación, así como la evaluación. Incluye una síntesis de los aspectos teóricos que subyacen a las propuestas didácticas y casos reales de clases con alumnos de toda la escuela primaria. Los gráficos, tablas e imágenes ilustran lo expuesto y brindan herramientas prácticas a cada docente.

La reflexión sobre la práctica del docente de Ciencias Naturales. Fundamentos teóricos y actividades didácticas para profesores y alumnos. María Ruina,2022-03-02 La teoría en sí misma no transforma el mundo. Puede contribuir para su transformación, pero para eso tiene que salirse de sí misma y tiene que ser asimilada y reelaborada por aquellos que van a causar con sus acciones reales y efectivas esa transformación1. (Paulo Freire, 1970) Indudablemente, el ejercicio de una actitud crítica y fundamentada durante la formación del profesorado brinda mejores oportunidades a los futuros docentes para afrontar los retos que propone la sociedad actual. En este sentido, adherimos fuertemente a la postura de Giroux (citado por Da Silva, 2001) cuando concibe al docente como un intelectual transformador, esto es, alguien que no se conduce como un técnico o un burócrata, sino como una persona comprometida, crítica y cuestionadora frente a los temas que tienen que ver con la enseñanza de su disciplina/área. Sin embargo, en la realidad existe una gran distancia entre esta postura y lo que llevan a cabo los docentes en sus clases. Antonio Gutiérrez (2009) asevera que, en la actualidad, los modelos didácticos predominantes en las clases de Ciencias Naturales, se corresponden con las perspectivas más tradicionales de la enseñanza,

que ponen el acento en la adquisición del vocabulario científico. En forma paralela, durante la formación docente se prioriza el dominio del conocimiento propio de las disciplinas, que, en el caso de las Ciencias Naturales, son los que corresponden a la Biología, la Física y la Química y en menor grado, los vinculados con las Ciencias de la Tierra. Dentro de este encuadre los saberes didácticos, metodológicos, epistemológicos, históricos, etc. quedan relegados a un segundo plano.

Consecuentemente, disminuyen también las posibilidades de reflexionar sobre sus propias prácticas y de pensar en maneras de superarlas. El autor plantea la necesidad de brindar espacios para que los futuros docentes puedan tomar decisiones frente a los problemas que plantean las situaciones particulares de su práctica a efectos de contribuir al desarrollo de su autonomía. A partir de este punto de vista, propone la siguiente definición para referirse a lo que significa enseñar: Enseñar constituye un complejo proceso de ponderación de situaciones concretas de trabajo y de toma de decisiones en torno a las mejores estrategias que posibiliten, en esas situaciones concretas, que los alumnos se apropien de los contenidos propuestos en el currículum escolar (Gutiérrez, 2009, p.141) Coincidimos plenamente con el autor cuando afirma que ser experto en una disciplina no equivale a ser experto en su enseñanza (p.141). Desde esta perspectiva cabe plantearse qué es lo que un docente de ciencias debería aprender durante su formación inicial y continua. Desde nuestra experiencia y atendiendo a las múltiples publicaciones referidas a esta cuestión, estimamos que en las planificaciones del profesor que se desempeña tanto en el Nivel Superior cuanto en las instancias de formación continua (capacitación/actualización docente) deberían estar presentes, entre otros, los siguientes tópicos: el conocimiento específico sobre el área curricular y sus vinculaciones con otros campos de conocimiento, la enseñanza de una imagen de la ciencia influida por la Tecnología, el contexto social, religioso, económico, político, etc., los fundamentos de la Didáctica general y específica para argumentar su práctica, la resolución de problemas vinculados con el mundo real, el abordaje de los contenidos desde una organización interdisciplinaria o interareal y el desarrollo de habilidades para comunicarse en ambientes laborales crecientemente tecnificados.

II Congreso CEU de Innovación Educativa y Docente 2021 Varios autores, 2022-12-19 En la dimensión de la calidad e innovación educativa y docente, esencial en nuestros compromisos a lo largo de toda nuestra trayectoria, los esfuerzos han sido relevantes. En el singular año 2020, el I Congreso de Innovación Docente presentó un conjunto de iniciativas que podemos calificar de ejemplares, y que fueron recogidas en el correspondiente libro de actas. Ahora presentamos las aportaciones que se expusieron en el II Congreso, en 2021, en un formato híbrido, en unos momentos en que teníamos clara la complementariedad entre, por un lado, proyectos de adecuación a las nuevas realidades y exigencias en ámbitos de contenidos y recursos tecnológicos, y, por otra parte, la conformación de experiencias que nos permitían ir articulando una nueva generación de iniciativas, metodologías y sistemáticas que, independientemente de su génesis, habían venido para quedarse.

Explorar y aprender con los cinco sentidos Inés García Díaz,Diana Pinchuk,2021-05-01 Las autoras plantean un abordaje integral de los sentidos, relacionando a cada uno con el funcionamiento del cuerpo humano y el cuidado de la salud. Para ello plantean diferentes contenidos y actividades adaptadas al Jardín de Infantes. Estas constituyen ejemplos concretos y cotidianos que resultan un importante aporte para su enseñanza. A lo largo de cada uno de los capítulos se brinda a los lectores información sobre el funcionamiento de los sentidos, y se sugieren algunas actividades para acompañar a los niños en el proceso de identificación y funcionamiento de los órganos que los comunican con el medio que los rodea, promoviendo el conocimiento y el cuidado. Seguramente el docente interesado en estos contenidos encontrará en este material una variedad de recursos didácticos y de información muy valiosa y actualizada para trabajar con sus alumnos, ya que utiliza un lenguaje claro y de fácil comprensión.

Aprender a estudiar Gabriela Fernández Panizza,2024-08-13 Muchos chicos y jóvenes no saben estudiar. Y los adultos que los acompañamos no sabemos cómo ayudarlos. ¿Por dónde empezar? Dónde buscar información; cuáles son las ideas más importantes; cómo se hacen un resumen, un cuadro, un mapa conceptual; cómo se prepara un examen oral o escrito... Este libro da las respuestas a estas preguntas y a muchas más. Respaldada por 20 años de experiencia docente, la autora propone técnicas y herramientas eficaces, desde el lugar de estudio hasta cómo lograr tranquilidad antes de un examen. Incluye 42 propuestas concretas de práctica de diferentes materias. El solucionario al final del libro permite verificar si estamos en el camino correcto o cómo aprender de los errores y tener éxito la próxima vez.
