**The Role of the Management Accountant** Lukas Goretzki,Erik Strauss,2017-09-27 There is considerable national variation in the professionalization and status of the management accountant. Although researchers from different countries have contributed to our knowledge about tasks and roles, we have limited insights into the development, education, and socio-cultural influences in different countries and surprisingly little is known about the local and national contexts in which these roles are learned and performed. This book bridges this research gap using two complementary perspectives. The first part explores management accountants in a range of different national contexts, providing information about country-specific historical developments and educational standards as well as specific roles and tasks. The second part focusses on important global developments that will increasingly impact management accountants in the future, such as sustainability, the financial crisis, technology and changing roles. By combining local context with a global overview, this insightful volume provides an agenda for future research which will be of great interest to scholars and advanced students in management accounting throughout the world.

**Management and Cost Accounting** Andreas Taschner, Michel Charifzadeh, 2020-09-01 Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the lingua franca of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. Management and Cost Accounting is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the

general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.
