Métodos y Pensamiento Crítico 1 Carlos Alejandro Zarzar Charur, 2015-03-18 En la Dirección General de Educación Media Superior del Estado de México se reformó la estructura curricular de Bachillerato General y Bachillerato Tecnológico, bajo un Modelo Educativo de Transformación Académica, basado en competencias (META). Se trata de un movimiento de transformación y cambio educativos en los planes y programas de estudio cuya característica distintiva es la de articular en un solo plano los contenidos educativos con un grupo de competencias y habilidades del pensamiento. El libro de Métodos y pensamiento crítico I se inserta en el segundo bloque de contenidos del campo disciplinar de Habilidades de pensamiento y componentes cognitivos; conforma la asignatura de componentes metacognitivos junto con psicología. El desarrollo de las competencias a través de los procesos metacognitivos impulsan al estudiante a emplear procedimientos como hipotetizar, justificar, explicar o argumentar, que influyen en cómo organiza sus aprendizajes y transfiere lo aprendido a situaciones

novedosas. El libro aborda en las dos primeras unidades: los distintos tipos de conocimiento, el concepto, las corrientes y el enfoque del pensamiento crítico, y en las dos siguientes hace un repaso del método científico de investigación y del método para el estudio de las ciencias sociales. En la entrada de cada unidad del libro se indican las competencias que habrá que desarrollar, tanto la general como las disciplinares (básicas y extendidas). Asimismo, se muestran los contenidos. Después, el interior de cada unidad se divide en tres partes: En la primera parte se presenta el planteamiento didáctico mediante cuadrantes. En la segunda parte se incluye el desarrollo temático de los contenidos propios así como ejercicios, lecturas de apoyo, cuadros y enlaces a sitios de Internet en los cuales se puede profundizar en el tema. Por último, la tercera parte consta de recomendaciones para la evaluación de la unidad: examen de conocimientos, rúbrica de autoevaluación en equipos, rúbrica para la evaluación de las exposiciones y rúbrica para la coevaluación al interior de cada equipo. También ofrece bibliografía de apoyo.

Currículo en Ciencias Naturales. Inés Andrea Sanabria Totaitive, Claudia Patricia Moreno Cely, Thiago Henrique Barnabé Corrêa, Bruno Dos Santos Pastoriza, Rafael Eduardo Sánchez Cuervo, Edelmira Ochoa Camacho, Cristian Andrés Sanabria Hurtado, Angie Viviana Arango Martínez, Liby Saray Sandoval Gutiérrez, Hander Albeiro Molina López, Lina María Pineda Castro, Karen Tatiana Molina Suárez, Alirio Severo Hernández Severo, 2021-05-04 El libro que aquí se presenta tiene aportes fundamentales en la construcción del currículo en ciencias naturales, una reflexión que dinamiza los elementos de las ciencias y los relaciona con experiencias que muestran el contexto real en la enseñanza y aprendizaje, además da una visión fresca del desarrollo en los últimos años, de investigaciones formativas y de orden estructural guiadas primero, a la formación y actualización constante del profesorado y segundo, a las reflexiones de la enseñanza de las ciencias. Es importante resaltar que todas las conclusiones que allí suscitan parten de la experiencia de investigadores de diferentes contextos educativos, centralizando los esfuerzos en la actualización de un currículo que tienda a la flexibilización y que genere espacios de encuentro real con la ciencia. En este sentido, los capítulos del libro están organizados en tres partes: tendencias, intersticios y posibilidades, los cuales presenta la exploración, observación, planteamientos y definiciones de acciones a desarrollar con el fin de realimentar desafíos que se vislumbran en los diversos contextos. Abstract The book

presented here, has fundamental contributions to the construction of the curriculum in natural sciences. A reflection that energizes the elements of science and relates them to experiences that show the real context in teaching and learning, as well as giving a fresh vision of development in recent years, formative and structural research guided first, to the training and constant updating of teachers and second, to the reflections of science teaching. It is important to highlight that all the conclusions that arise there are based on the experience of researchers from different educational contexts, centralizing efforts in updating a curriculum that tends to be more flexible and that generates spaces for real encounters with science. In this sense, the chapters in the book are organized into three parts: trends, interstices and possibilities, which present the exploration, observation, approaches and definitions of actions to be developed in order to respond to challenges that are seen in the various contexts.

La criminalística en preguntas y respuestas Rafael Enrique Hernández de la Torre,2018-05-08 La investigación de los delitos es fundamental para el sistema policial y la justicia penal. Con el uso de lo más avanzado de la ciencia y la técnica, la criminalística ha devenido herramienta indispensable para establecer la necesaria objetividad en la elaboración de dictámenes periciales, formulación de hipótesis y determinación de la autoría de un hecho delictivo. El presente texto responde a cincuenta interrogantes sobre el quehacer de esta especialidad en la búsqueda de las evidencias necesarias para determinar la autoría de un delito; también se incluye una breve reseña del desarrollo de esta ciencia en el mundo y los pioneros en esta rama del saber (entre los cuales están algunos cubanos notables) y, para finalizar, se hace referencia a casos famosos donde la criminalística desempeñó un importante papel para desentrañar la verdad de los hechos.

Dimensión sociocultural de la didáctica de las ciencias naturales desde la formación de profesores de física

Olga Castiblanco Abril,2023-12-01 Si es docente de Ciencias Naturales, Física, Química, Biología, Astronomía o afines, o está en proceso de formación, en este libro encontrará una manera de transformar su discurso científico en el aula. Mucho se dice actualmente de la necesidad de cambiar formas tradicionales de asumir los procesos de aprendizaje y de enseñanza, sin que se sepa exactamente cómo es que se logra este objetivo en el día a día de las instituciones educativas. En esta obra hallará un conjunto de reflexiones y experiencias que le permitirá analizar sus maneras de entender la profesión docente y proyectar visiones alternativas. También se suele decir que para enseñar ciencias no basta con saber el contenido de la disciplina, ya que se requiere de integrar conocimientos específicos provenientes de las Ciencias Sociales y Humanas, sin embargo, suele ser difícil imaginar cómo ir más allá de los contenidos que se enseñan. En esta propuesta no se asume la formación en didáctica como un entrenamiento para la creación o uso de materiales didácticos ni tampoco se la entiende como la búsqueda de procesos que garanticen mayor aprehensión del contenido científico, en cambio, se asume como la forma de Ser del

profesional de la enseñanza, en la que la interacción en la clase, aporta crecimiento personal a todos los participantes, en todas las dimensiones del ser humano, no solamente en el desarrollo de ciertas lógicas matemático-científicas. En general, el libro se trata de aprender a integrar conocimientos provenientes de la Psicología cognitiva, la Antropología, la Pedagogía, la Educación, la Sociología y la Lingüística, para el diseño metodológico innovador de la enseñanza de las Ciencias Naturales.

Mitomanías argentinas Alejandro Grimson, 2019-11-22 Cuán profundamente argentino es insultar cotidianamente a la Argentina. Y sin embargo..., como dice una conocida canción, este rasgo de identidad tiene su contracara: la argentinidad al palo, La calle más larga, el río más ancho, las minas más lindas del mundo... Que el Che, Gardel y Maradona son los number one, y argentinos ¡gracias a Dios! También Videla y el Mundial 78, Galtieri y 'los estamos esperando'. ¿Yo?... ¡Argentino! Del éxtasis a la agonía oscila nuestro historial. Podemos ser lo mejor, o también lo peor, con la misma facilidad. En *Mitomanías argentinas*, Alejandro Grimson se atreve a un original ejercicio de introspección: ofrece una lista abierta de mitos y los revisa uno por uno para hacerlos caer, para que muestren lo que tienen de vulnerable, de falso, de argumento insostenible, de repetición machacona. ¿Fuimos la nación más europea de América Latina y una maldición nos arrojó al basurero de la periferia? ¿Brasil o Chile están en el camino correcto y la Argentina no deja de cometer errores? ¿Son los paraguayos, peruanos o bolivianos los responsables del desempleo en la Argentina? ¿Es cierto que los argentinos descendemos de los barcos, así como los mexicanos descienden de los aztecas? No importa que los mitos sean de derecha o de izquierda, religiosos o laicos, patrioteros o extranjerizantes: son bombas de tiempo que hay que desactivar para que el rompecabezas argentino se organice sobre bases plurales y para que el debate público no quede encerrado en Mitolandia. Grimson nos convence de que tener una mirada más compleja y cabal de nosotros mismos es un primer paso para construir una sociedad mejor.

Conflicto y diálogo entre ciencia y religión Agustín Udías Vallina, 1993-09-14 Ciencia y tecnología ejercen hoy una tremenda influencia tanto en la vida del hombre como en su visión del universo y de sí mismo. El hombre se dirige a las ciencias siempre que busca una respuesta a los enigmas del universo o trata de resolver los problemas que se le plantean. Sin darnos cuenta, acabamos creyendo que la ciencia tiene en sí todas las respuestas. ¿Le queda todavía algún papel a la religión? Algunos piensan que, ante el avance de la ciencia, ya no queda lugar para la fe religiosa. Sin embargo, hay muchas preguntas -las que se refieren al sentido de la existencia del universo y del propio hombre- a las que las ciencias no pueden dar respuesta y a las que sí trata de responder la fe cristiana. ¿Qué relación hay entre ciencia y religión? Hay quienes piensan que entre ambas sólo ha habido un continuo conflicto en el que la ciencia siempre ha salido ganando. Una gran parte de dicho conflicto se debe a una mala comprensión de la mutua independencia y autonomía de ambas esferas. Ni la ciencia

puede entrometerse en el ámbito de lo religioso, ni la religión en el de lo científico. Sin embargo, una pura neutralidad entre ciencia y fe ya no es hoy aceptable. Hay que buscar nuevas formas de relación que, yendo más allá del reconocimiento de su mutua independencia, establezca entre ellas un verdadero diálogo constructivo. La religión tiene que escuchar lo que las ciencias aportan sobre la naturaleza de la realidad material, y éstas deben dejar que la inspiración religiosa impregne de sentido la actividad científica, porque el progreso científico-tecnológico no es un fin en sí mismo, sino que debe orientarse al bien del ser humano. Agustín Udías Vallina, S.J. es catedrático de Geofísica en la Universidad Complutense de Madrid y profesor de Filosofía e Historia de la Ciencia en la Universidad Pontificia de Comillas. Ha ejercido la investigación y la docencia en las Universidades de California (Berkeley), Frankfurt y Barcelona y es autor de varios libros y artículos sobre temas de Geofísica y Sismología.
