State of inequality: HIV, tuberculosis and malaria, 2021-12-08 This report delivers the first systematic analysis of available data to make an authoritative statement on the status of inequality in HIV/AIDS, TB and malaria. Monitoring inequalities in HIV/AIDS, tuberculosis and malaria (in terms of burden, prevention and treatment) helps to pinpoint where there may be gaps and identify population groups that are being left behind, and support countries and international organizations to tailor policies, programmes, and service provision to close these gaps. The objectives of the report are to: assess the latest status and change of inequality in HIV/AIDS, malaria and tuberculosis globally; identify good-performing countries in terms of equity as well as countries that have room for improvement; and investigate the association of inequality with inequality in other health topics, social determinants of health and access to health facilities. This report supports Output 4.1.2 of GPW 13 (GPW 13 impacts and outcomes, global and regional health trends, Sustainable Development Goal indicators, health inequalities and disaggregated data monitored). Similar analysis have been previously conducted and published for other disease topics, including *State of inequality: Childhood immunization* and *State of inequality: Reproductive, maternal, newborn and child health*.

A rich and unusual resource for a developing country, this book offers the reader a one-stop

snapshot of how a country handles the wrenching social, political, cultural, economic and environmental challenges of changing from one political and economic system to another. Unadorned by backward-looking historical narratives, these are accounts fizzing with the energy of the moment: a first draft of a tough time for most Mongolians.

Adversity, Stress, and Psychopathology Bruce P. Dohrenwend,1998-08-20 Adversity involves exposure to unpropitious or calamitous circumstances. It occurs in extreme situations such as prolonged combat or natural disasters, both of which affect whole groups or communities of people simultaneously. It is found as well in more individually targeted events such as child abuse, bereavement, rape, physical illness, marital separation or divorce, unemployment, and homelessness. Exposure to adversity is not randomly distributed in society. It varies, for example, with gender, ethnic or racial background, and socioeconomic status. And some types of adversity can be precipitated by an individual's own actions. In this volume, the leading investigators review research on the nature of adversity and its relationship to major types of psychopathology including schizophrenia, depression, alcoholism and other substance-use disorders, antisocial personality disorder, post-traumatic stress disorder, and nonspecific distress. These relationships are examined in terms of theoretical concepts of life stress that describe the characteristics of the ongoing situation in which adverse events occur and the factors of personality and coping ability that also affect psychiatric outcomes. The authors sift through firm and infirm findings and critically evaluate existing theory and research strategies and provide an integrative theoretical framework. No other book offers as comprehensive and authoritative a discussion of the role of psychosocial stress in causing mental disorders.

The themes are: online experience (i.e., the overuse of screens, the proliferation of inappropriate videos, or parental pressures for children to remain always connected), the difficulties of pandemic times (i.e., coping with anxiety or illness), and two conditions of great fragility (that of being a migrant refugee minor, or an adolescent with severe mental disorder). These topics illustrate the multiple adolescent development pathways that inspire the plural title of the volume: *Adolescences*.
