Inherited Retinal Disease Hyeong-Gon Yu, 2022-02-07 This book presents the latest knowledge and expert guidance on all aspects of inherited retinal diseases, including molecular genetics, diagnosis, clinical features, general principles of treatment, novel treatment methods, and genetic counseling. Recent years have witnessed great advances in understanding of the genetic and cytological background of these diseases. Genetic analysis methods such as next generation sequencing have remarkably reduced the cost and time required for massive analysis of patients’ samples. Studies on gene therapy and stem cell therapy have been successfully carried out in animal models, and gene therapy is now available for Leber congenital amaurosis caused by RPE65 mutations. Against this background, *Inherited Retinal Disease* will be an invaluable up-to-date resource for ophthalmologists, medical students, and researchers in ocular inflammation. In addition to supplying essential information on each individual disorder, it features many interesting cases contributed by global leaders in the field

as well as clinical photographs obtained with newer imaging techniques and numerous images of rare but clinically important diseases.

Retinal Degenerative Diseases Catherine Bowes Rickman,Matthew M. LaVail,Robert E. Anderson,Christian Grimm,Joe Hollyfield,John Ash,2015-10-01 Contains the proceedings of the XVI International Symposium on Retinal Degeneration (RD2014), to be held July 13-18, 2014 at the Asilomar Conference Center in Pacific Grove, California. A majority of those who will speak and present posters at the meeting will contribute to this volume. The Symposium addresses the blinding diseases of inherited retinal degenerations, which have no effective treatments and age-related macular degeneration, which has no cures, despite the fact that it is an epidemic among the elderly, with 1 in 3-4 affected by the age of 75. The RD2014 Symposium will focus on the exciting new developments aimed at understanding these diseases and providing therapies for them. The volume will present representative state-of-the-art research in almost all areas of retinal degenerations, ranging from cytopathologic, physiologic, diagnostic and clinical aspects; animal models; mechanisms of cell death; molecular genetics; and developing potential therapeutic measures such as gene therapy and neuroprotective agents for potential pharmaceutical therapy; and several sight restoration approaches, including optogenetics. While advances in these areas of retinal degenerations will be included, several new topics either were in their infancy or did not exist at the time of the last RD Symposium, RD2012. These include many new developments in sight restoration using optogenetics, retinal or RPE cell transplantation, stem cell approaches and visual prosthetic devices. In addition, major advances will be presented in other basic mechanisms in age-related macular degeneration, several new aspects of gene and antioxidant therapy and revolutionary new imaging and functional testing that will have a huge impact on the diagnosis and following the course of retinal degenerations, as well as to provide new quantitative endpoints for clinical trials. The retina is an approachable part of the central nervous system (CNS), and there is a major interest in neuroprotective and gene therapy for CNS diseases and neurodegenerations, in general. It should be noted that with successful and exciting initial clinical trials in neuroprotective and gene therapy, including the restoration of sight in blind children, the retinal degeneration therapies are leading the way towards new therapeutic measures for neurodegenerations of the CNS. Many of the successes recently reported in these areas of retinal degeneration sprang from collaborations established at previous RD Symposia, and many of those will be reported at the RD2014 meeting and included.

Fluorescence Lifetime Imaging Ophthalmoscopy Martin Zinkernagel, Chantal Dysli, 2019-07-29 This book focuses on the emerging non-invasive imaging technique of Fluorescence Lifetime Imaging Ophthalmoscopy (FLIO). FLIO reveals unique information on retinal diseases, ranging from age-related macular degeneration and vascular diseases to hereditary retinal dystrophies. Fluorescence lifetimes enable the evaluation of disease progression before irreversible structural changes occur. The image acquisition is suitable for diagnostic purposes and follow-up examinations to investigate the natural course of disease, and to monitor the effects of possible therapies. This book fills the gap between available literature and gives state-of-the-art guidance on the principles of the FLIO technique, image acquisition, and data analysis. Written by a team of expert leaders within this field, this book will be relevant for scientists and clinicians with an interest in ophthalmoscopy.

Atlas of Inherited Retinal Diseases Stephen H. Tsang, Tarun Sharma, 2018-12-21 This Atlas of Inherited Retinal Disorders provides a thorough overview of various inherited retinal dystrophies with emphasis on phenotype characteristics and how they relate to the most frequently encountered genes. It also meets the previously unmet needs of PhD students who will benefit from seeing the phenotypes of genes they work on and study. Further, because genetic-testing costs are quite high and spiraling higher, this Atlas will help geneticists familiarize themselves with the candidate gene approach to test patients' genomes, enabling more cost-efficient testing. This invaluable atlas is organized into eight sections starting with an introduction to the basic knowledge on retinal imaging, followed by diseases listed according to inheritance pattern and disorders with extraocular manifestations grouped by defining features. This structure will be intuitive to clinicians and students studying inherited retinal disorders.

Imaging Techniques J. Cunha-Vaz, A. Koh, 2018-05-14 The introduction of new imaging methods has revolutionized the management of retinal diseases. Techniques like OCT angiography and fundus autofluorescence imaging have enabled the exploration of new perspectives for understanding the progress of diseases such as age-related macular degeneration (AMD) and diabetic retinopathy. Multimodal imaging of the retina will open new avenues for an integrated diagnostic approach in the future. This publication - like all volumes of the 'ESASO Course Series' - summarizes the essentials of the ESASO education courses. It provides an update for retina specialists and imaging technicians. Residents and trainees will also find it to be useful for learning about new imaging techniques.

Ciliopathies Thomas D. Kenny, Philip L. Beales, 2013-08-15 The ciliopathies are a group of rare diseases that often affect multiple systems within the body, and are caused by defects in the function or structure of cilia. When cilia go wrong, there

are profound consequences; these are discussed in detail for the first time in *Ciliopathies: a reference for clinicians*. The book provides a clinical overview and reference to this newly emergent group of disorders ranging from Alström syndrome to putative ciliopathic disorders. Each chapter provides an in-depth discussion on a specific disorder, including the latest scientific research together with a description of its features, and practical guidelines on diagnosis. The authors also examine the evidence for dysfunction of cilia in cancer and more common disorders. *Ciliopathies: a reference for clinicians* will appeal to those involved in the care of patients with ciliopathies, including specialists in the fields of nephrology, diabetes, cardiology, and ophthalmology, and non-clinical researchers interested in cilia biology.

Retinal and Choroidal Vascular Diseases of the Eye Jay Chhablani, 2024-03-09 *Retinal and Choroidal Vascular Diseases of the Eye* explores a variety of retinal and choroidal vascular diseases, covering their pathogenesis, clinical features, and management strategies. Recent innovations and upcoming treatment options are also explored for the various diseases throughout the book. This comprehensive reference provides a deep dive into vascular diseases of the eye, and is a must-have reference for ophthalmologists, medical and surgical retina specialists, and researchers in related fields - Explores numerous retinal and choroidal disease entities and their pathogenic mechanisms - Features multimodal images to help illustrate and describe the disease entities - Discusses innovative treatment options for choroidal vascular diseases - Considers the latest clinical trials related to retinal and choroidal disorders, and provides key learnings

Cell-Based Therapy for Degenerative Retinal Disease Marco A. Zarbin, Mandeep S. Singh, Ricardo P. Casaroli-Marano, 2019-03-01 This book discusses why specific diseases are being targeted for cell-based retinal therapy, what evidence exists that justifies optimism for this approach, and what challenges must be managed in order to bring this technology from the laboratory into routine clinical practice. There are a number of unanswered questions (e.g., surgical approach to cell delivery, management of immune response, optimum cell type to transplant) that very likely are not going to be answered until human trials are undertaken, but there is a certain amount of “de-risking” that can be done with preclinical experimentation. This book is essential reading for scientists, clinicians, and advanced students in stem cell research, cell biology, and ophthalmology.
