AttributeError: 'super' object has no attribute - Stack Overflow Jul 9, 2018 · I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: `AttributeError: 'super' object has no attribute do_something` class Parent: def __init__(self):... *coding style - Using "super" in C++ - Stack Overflow* As for chaining `super::super`, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java (where you can't chain "super"). *oop - What does 'super' do in Python? - Stack Overflow* Nov 3, 2015 · The one without super hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with super has greater flexibility. The call chain for the methods can be ... *python - replace block within { { super () } } - Stack Overflow* In the child template, I would like to include everything that was in the head block from the base (by calling `{{ super() }}`) and include some additional things, yet at the same time replace the title block within the super call. *How does Python's super () work with multiple inheritance?* In fact, multiple inheritance is the only case where `super()` is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead. *'super' object has no attribute '__getattr__' in python3* Mar 5, 2015 · The Python attribute retrieval mechanism works in a way that a class `__getattr__` is called as "last resource" to try to get an attribute for an instance of that class. Your code is right - it fails due to your superclass of "Example" - in this case "object" - not having a `__getattr__` attribute. If you are not at a deep class hierarchy and want to perform custom attribute retrieval for a ... *'super' object has no attribute '__sklearn_tags__'* Dec 18, 2024 · 'super' object has no attribute '`__sklearn_tags__`'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues between Scikit-learn and XGBoost or Python version. I am using Python 3.12, and both Scikit-learn and XGBoost are installed with their latest versions. **Understanding Python super() with __init__() methods** Feb 23, 2009 · `super()` lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen. *super () in Java - Stack Overflow* Sep 22, 2010 · `super()` is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. **Python: 'super' object has no attribute 'attribute_name'** After the base class's `__init__` ran, the derived object has the attributes set there (e.g. `some_var`) as it's the very same object as the self in

the derived class' __init__. You can and should just use self.some_var everywhere. super is for accessing stuff from base classes, but instance variables are (as the name says) part of an instance, not part of that instance's class.
