Engineering Design Applications III Andreas Öchsner, Holm Altenbach, 2020-03-05 This book provides an update on recent advances in various areas of modern engineering design, such as mechanical, materials, computer, and process engineering, which provide the foundation for the development of improved structures, materials, and processes. The modern design cycle is characterized by the interaction of different disciplines and a strong shift toward computer-based approaches involving only a small number of experiments for verification purposes. A major driver for this development is the increased demand for cost reduction, which is also connected to environmental demands. In the transportation industry (e.g. automotive or aerospace), where there is a demand for greater fuel efficiency, one solution is lighter structures and/or improved processes for energy conversion. Another emerging area is the interaction of classical engineering with the health and medical sector.

Distributed Computing and Artificial Intelligence Andre Ponce de Leon F. de Carvalho, Sara Rodríguez-González, Juan F. De Paz Santana, Juan Manuel Corchado Rodríguez, 2010-11-18 The International Symposium on Distributed Computing and Artificial Intelligence (DCAI'10) is an annual forum that brings together past experience, current work and promising future trends associated with distributed computing, artificial intelligence and their application to provide efficient solutions to real problems. This symposium is organized by the Biomedicine, Intelligent System and Educational Technology Research Group (<http://bisite.usal.es/>) of the University of Salamanca. The present edition has been held at the Polytechnic University of Valencia, from 7 to 10 September 2010, within the Congreso Español de Informática (CEDI 2010). Technology transfer in this field is still a challenge, with a large gap between academic research and industrial products. This edition of DCAI aims at contributing to reduce this gap, with a stimulating and productive forum where these communities can work towards future cooperation with social and economic benefits. This conference is the forum in which to present application

of innovative techniques to complex problems. Artificial intelligence is changing our society. Its application in distributed environments, such as internet, electronic commerce, environment monitoring, mobile communications, wireless devices, distributed computing, to cite some, is continuously increasing, becoming an element of high added value with social and economic potential, both industry, life quality and research. These technologies are changing constantly as a result of the large research and technical effort being undertaken in universities, companies.

La paz no nace cuando la guerra termina Francisco Manuel López López, José Manuel Alarcón Martínez, 2022-07-14

Con este trabajo queremos recuperar y dar a conocer a los ciudadanos de Roquetas de Mar y a todos aquellos interesados en lo acontecido en dicha localidad, una parte de la historia de este pueblo de la provincia de Almería. Una historia local, pero que abarca unos acontecimientos cruciales en la Historia española que marcaron profundamente el devenir posterior, y cuyas consecuencias están aún hoy día presentes en la sociedad actual. Abordaremos el análisis de la represión franquista partiendo del marco histórico que la originó, incluyendo los aspectos sociales y económicos que son en gran parte responsables de los posicionamientos políticos de la población. Hemos estructurado el trabajo en tres partes. La primera, dedicada a establecer el marco histórico, la subdividimos en dos capítulos: un primer capítulo en el que se apuntan algunos aspectos socioeconómicos; un segundo capítulo en el que se hace un recorrido por la situación política, recogiendo las asociaciones y partidos existentes, analizando los procesos electorales y las actuaciones de las corporaciones locales. En la segunda parte; en el tercer capítulo hacemos un breve análisis de los acontecimientos más significativos ocurridos en la localidad durante la Guerra Civil, excluyendo la represión en la retaguardia republicana que la tratamos, de forma más pormenorizada, en el cuarto capítulo. Hemos reunido en el mismo bloque de estudio tanto el análisis de la Segunda República como el de la Guerra Civil, pues consideramos, en contra de la opinión de algunos, que la segunda no fue consecuencia de la primera. La tercera parte del trabajo la constituye el análisis de la represión de posguerra, tanto física como económica, a través de otros dos capítulos: en el primero contemplamos globalmente la represión en cuanto a delitos, tribunales, condenas, procesados y procedimientos; en el segundo se recogen, de forma individualizada, los procedimientos sumarios seguidos contra ciudadanos de Roquetas de Mar por diferentes hechos ocurridos desde la llegada al poder del Frente Popular hasta la finalización del conflicto. Concluimos con un estudio dedicado a la represión económica a través de la Ley de Responsabilidades Políticas.

Properties and Characterization of Modern Materials Andreas Öchsner, Holm Altenbach, 2016-07-30 This book focuses on robust characterization and prediction methods for materials in technical applications as well as the materials' safety features during operation. In particular, it presents methods for reliably predicting material properties, an aspect that is

becoming increasingly important as engineering materials are pushed closer and closer to their limits to boost the performance of machines and structures. To increase their engineering value, components are now designed under the consideration of their multiphysical properties and functions, which requires much more intensive investigation and characterization of these materials. The materials covered in this monograph range from metal-based groups such as lightweight alloys, to advanced high-strength steels and modern titanium alloys. Furthermore, a wide range of polymers and composite materials (e.g. with micro- and nanoparticles or fibres) is covered. The book explores methods for property prediction from classical mechanical characterization-related fields of application, for example, from wear, creep, fatigue and crack growth, to specific surface properties, to dielectric and electrochemical values. As in all fields of modern engineering, the process is often accompanied by numerical simulation and optimization.

Amphibian Alliance for Zero Extinction sites in Chiapas and Oaxaca Rodolfo Cabrera Hernandez,John F.

Lamoreux,Meghan W. McKnight,2015-03-01 The potential for numerous amphibian species to go extinct in Oaxaca and Chiapas is high and worthy of being considered a major environmental problem. This report summarizes the findings of a project aimed at gathering information at 16 sites in southern Mexico which had been identified in 2005 as being essential to the continued existence of 22 highly threatened amphibian species, the hope being that it could help initiate conservation action. Site and species information are presented as a series of profiles.

9th Congress on Electronic Structure: Principles and Applications (ESPA 2014) Manuel F. Ruiz-Lopez,Francisco J. Olivares del Valle,2016-03-04 This volume collects research findings presented at the 9th Edition of the Electronic Structure: Principles and Applications (ESPA-2014) International Conference, held in Badajoz, Spain, on July 2-4, 2014. The contributions cover research work on theory, methods and foundations, materials science, structure and chemical reactivity as well as environmental effects and modelling. Originally published in the journal Theoretical Chemistry Accounts, these outstanding papers are now available in a hardcover print format, as well as a special electronic edition. This volume provides valuable content for all researchers in theoretical chemistry, and will especially benefit those research groups and libraries with limited access to the journal.

The Creation, Diffusion, and Reception of Italian Art in the Early Modern Iberian World Corinna Tania Gallori, Benito Navarrete Prieto, 2025-05-30 This edited volume addresses the circulation of works of art, images, and ideas between the Iberian and Italian world and the subsequent responses this motion generated. Amongst the themes discussed are the concepts of centre and periphery, replicas and alterations, and how items and ideas were reinterpreted. The processes of appropriation and transformation create an artistic geography of identities in which originality can be studied through the processes of assimilation of images shared between Europe, Asia, and America. Chapters challenge the negative conceptualization of "copying" arguing that the "copy" is not simply a derivation but a new creation that is shaped by the interests and preferences of the receiver. Similarly, contributors argue for a more nuanced concept of what exactly an artistic centre is. The book will be of interest to scholars working in art history, Renaissance studies, and Iberian studies.
