Theodore L. Brown, H. Eugene LeMay, Bruce Edward Bursten, Julia R. Burdge

Materiales cerámicos Emma del Carmen Vázquez Malagón, 2005

Tecnología de proceso y transformación de materiales Maria Nuria Salán Ballesteros, 2009-07 Los principales objetivos de esta asignatura son la introducción de los distintos tipos de materiales de aplicación industrial, el establecimiento de relaciones estructura-propiedades de cada grupo de materiales y la descripción de los principales procesos de transformación que se desarrollan industrialmente para convertir un material en un componente final. Para ello, se parte del conocimiento básico de la estructura de los materiales de ingeniería (metales, materiales cerámicos, polímeros y compuestos), así como del comportamiento y las características que se asocian con dicha estructura. Se describen los procesos de transformación de componentes, cuya selección se justifica sobre la base de las características de los materiales que se han de transformar, y se indican algunos de los tratamientos más comunes que permiten modificar el comportamiento macroscópico de un componente para adecuarlo a las solicitaciones requeridas. En la descripción de los procesos, se introducen los criterios a considerar a la hora de realizar la selección del material más adecuado, en la medida de lo posible.

Materia prima, cerámica y sociedad Xavier Clop García,2007 This study focuses on the management of raw materials used in early ceramics production (late Neolithic to early Bronze Age) in the north-eastern part of the Iberian Peninsular (Catalonia). The main aim of the study was to attempt to understand some aspects of the socio-economic organization of the ancient inhabitants of the area. The objective was not only to describe the archaeological material and put forward some economic and chronological hypotheses, but also to define some aspects of the social structures. Special consideration in this study was paid to the Bell Beaker finds and the work contains detailed scientific analyses of the finds. Spanish text.

La cerámica a mano de Peña Negra y La Fonteta Irene Vinader Antón, 2025-03-06 El estudio de las cerámicas a mano de los asentamientos de Peña Negra (Crevillent) y La Fonteta (Guardamar del Segura) supone una aproximación a dos de los núcleos urbanos protohistóricos más destacados de la Península Ibérica a partir de unas producciones muy abundantes y con unas destacadas posibilidades interpretativas. Se analiza por un lado el caso de Peña Negra, un núcleo indígena de carácter urbano, que cabe identificar con la ciudad de Herna citada en la Ora Maritima de Avieno, con una larga cronología entre los siglos X y VI a. C. Se trata de asentamiento de gran magnitud y dinamismo ya desde su fundación, que permite analizar en detalle las características de esta producción artesanal tanto en la etapa del Bronce Final, anterior a la implantación fenicia estable en la zona, como ya durante el Hierro Antiguo, cuando encontramos una populosa ciudad orientalizante marcada por los importantes contactos con la comunidad fenicia asentada en la desembocadura del río Segura. Se analiza de forma paralela el material procedente de su necrópolis, Les Moreres, lo que permite incorporar la perspectiva desde el ámbito funerario. Por otro, se aborda La Fonteta, uno de los núcleos urbanos fenicios occidentales más destacados, fechado entre un momento avanzado de la segunda mitad del siglo VIII y el último tercio del VI a. C., y por tanto contemporáneo con Peña Negra, centrando el estudio preferentemente en la campaña de excavación de 2018-2019. El estudio conjunto de Peña Negra/Les Moreres y La Fonteta permite analizar los mecanismos de interacción entre las poblaciones indígenas y fenicias a partir de este tipo de producciones, determinando tanto las características y la evolución de estas manufacturas, como su procedencia. Unas producciones que presentan gran complejidad, de marcada tradición del Bronce Final, pero que cuentan con la suficiente importancia en la cotidianeidad de las comunidades del Hierro Antiguo como para mantener su uso,

participando activamente en todas las dimensiones sociales y económicas del momento, siendo incorporada como parte del ajuar doméstico de las comunidades fenicias occidentales.

RECURSOS GEOLÓGICOS. UNA PERSPECTIVA MINERAL Y AMBIENTAL GARCÍA DEL AMO, Dolores ,REGUEIRO Y GONZÁLEZ-BARROS, Manuel ,2024-11-04 El suministro seguro de materias primas para la industria es clave para el mantenimiento de nuestro modo de vida. Los recursos minerales son parte fundamental de este suministro, siendo la geología la ciencia básica para su estudio y prospección. Los aspectos tecnológicos y medioambientales de la extracción y el uso de estos recursos deben dotarse de una visión sostenible para garantizar su utilización futura. Por ello, la Comisión Europea ha propuesto un conjunto integral de medidas para garantizar el acceso de la UE a un suministro seguro, diversificado, asequible y sostenible de materias primas fundamentales. La Ley de Materias Primas Fundamentales también mejora la capacidad de la UE para supervisar y mitigar los riesgos de perturbaciones, e incrementa la circularidad y la sostenibilidad.
