Medicina Ortomolecular Antonio Marco Chovert,2013-06-05 Pese a la gran información y publicaciones científicas que avalan la importancia de la suplementación nutricional tanto preventivamente como terapéuticamente, todavía encontramos profesionales de la salud que lo cuestionan. Intento aportar información de diversas publicaciones de diferentes revistas consideradas científicas. Frente a la frase “no existen trabajos publicados “se encuentra la otra frase “El que no los conozca, no quiere decir que no están publicados, quizás le falte a Ud mas información o capacidad de búsqueda”. ¿Somos lo que comemos? Desde hace años sabemos que los niveles de nutrientes en los alimentos están disminuyendo, y algunos de ellos pueden llegar a tener un déficit del 75% de nutrientes comparado con los mismos alimentos de hace 50 años. Esta alteración no tiene nada que ver con los alimentos elaborados a las cuales se les añade uno o varios nutrientes; me refiero a los alimentos básicos como verduras, frutas, leche, carnes. Por ejemplo el hierro, si lo comparamos con los mismos alimentos de hace 50 años, ha disminuido en la carne en un 55%, en la leche en un 60%, el magnesio a disminuido en un 21%. Esta situación nos hace plantearnos si la agricultura intensiva, las granjas de animales, (por ejemplo las granjas de gallinas, que debido a su sobreestimulación para poner los huevos, por cierto, que esos huevos tienen mas grasa) y la dependencia

química (fertilizar los campos para que crezca rápido el pasto para los animales), produce alimentos con las cantidades de nutrientes adecuadas. Si que está claro que producen mas cantidad de alimento, ¿pero y la cantidad y calidad de los nutrientes? Es más importante para la industria la cantidad más que la calidad de los alimentos? Entonces podemos pensar que cuando un nutricionista o un experto en nutrición dice que comiendo de todo no podemos tener déficit de nada , es mas que cuestionable, ya que dependerá de que alimentos, del cultivo, del almacenamiento , del tratamiento de los alimentos, de la preparación o de la forma de cocinar, y por otra parte tendremos que valorarnos nosotros mismos, si estamos sanos o enfermos, si el intestino ,páncreas, estomago está bien o no, si masticamos rápido o nos tragamos la comida como los patos, si tenemos alergias alimentarias, si estamos estresados, etc. Por citar algunos ejemplos que podrían provocar déficit de varios nutrientes Desde hace mas de 40 años diversos estudios sistemáticamente confirman que las alteraciones nutricionales alteran la respuesta inmune y esta situación nos conduce a padecer infecciones, y aumento de mortalidad. Pero la suplementación de nutrientes disminuye los efectos negativos del déficit de nutrientes. . Existe abundante cantidad de publicaciones científicas relacionadas con problemas comunes que aparecen con la edad atribuible a déficit de micronutrientes en la alimentación, y que la suplementación de dichos nutrientes mejora los niveles y evita el déficit.

Síndrome de Down. De la genética a la neurobiología Octavio García,Natalia Arias Trejo,Karla A. Flores Arizmendi,2025-06-13 A partir del conocimiento es como podemos entender un síndrome y así ayudar a quienes trabajan directamente con las personas que esperan la llegada de un niño con síndrome de Down o quienes ya conviven con éste. Así, el texto presenta una serie de investigaciones recientes sobre el síndrome de Down que van de lo genético a lo conductual, un material original para todos los interesados en el tema.

Toxicología Darío Córdoba Palacio, 2022-08-17 La TOXICOLOGIA de Córdoba se ha convertido en un clásico desde 1986, en esta su quinta edición se incluyen capítulos con temas novedosos y sobre todo con temas que son de interés en nuestro medio que se han hecho necesarios para completar el panorama que frecuentemente toca atender al especialista. Aunque el libro está dirigido a profesionales y estudiantes del área Biológica, medicina, enfermería, veterinaria, etc., el lenguaje que se utiliza es claro y sencillo con el fin de hacerlo comprensible a los estudiantes de áreas diferentes como ingeniería agronómica, jefes de seguridad de empresas a quienes algunos términos comúnmente utilizados por los toxicólogos pueden resultar confusos. Complementado la mayoría de los capítulos de la edición anterior esta edición cuenta con nuevos temas como: • Consideraciones sobre el diagnóstico de las intoxicaciones • Toxicodinamia • Riesgo químico • Plaguicidas prohibidos o severamente restringidos y períodos de carencia • Agentes químicos bélicos • Rodenticidas • Intoxicación por selenio • Intoxicación por antibióticos • Intoxicación por isoniacida • Intoxicación por hipoglucemiantes orales • Intoxicación por inhibidores selectivos de la recaptación de serotonina (ISRS) • Metanol • Anilinas • La dosis personal • Yuca y neuropatías • Marea roja • Leptidopterismo y erucismo • Accidentes causados por anfibios, peces y ciguatera • Rayas venenosas • Veneno de peces y animales acuáticos • Cloro y compuestos clorados • Enfermedad profesional de origen tóxico La responsabilidad que el profesional de cualquiera de las áreas que se han mencionado tiene cuando de su decisión depende el tratamiento de una vida, la aplicación de sustancias en el ambiente, la decisión frente a una contaminación letal, es tal, que por ello esta obra reitera la imperiosa necesidad de enseñar TOXICOLOGÍA, a todos aquellos futuros profesionales, médicos, odontólogos, enfermeras, veterinarios, químicos, agrónomos, legistas, etc. sin olvidar, que además de los graves problemas de las intoxicaciones agudas y crónicas, aparece en el panorama cada vez más amenazante el daño por tóxicos en el ambiente, en el campo laboral, en una palabra, en cada paso de la vida diaria.

Biología molecular y citogenética SIPAN SARRIÓN, M^a CRUZ, CUENCA PARDO, JUAN BAUTISTA, MOTA CAPARRÓS, MANUEL, 2016-01-01 Este libro desarrolla los contenidos del módulo profesional de Biología Molecular y Citogenética de los

Ciclos Formativos de grado superior de Laboratorio Clínico y Biomédico (LOE) y de Anatomía Patológica y Citodiagnóstico (LOE), pertenecientes a la familia profesional de Sanidad. También puede resultar de interés para los técnicos superiores en Laboratorio de Diagnóstico Clínico y en Anatomía Patológica y Citología (LOGSE) y la asignatura de Biología de Bachillerato. El libro se estructura en siete unidades cuyo estudio permitirá al alumno conocer los laboratorios de biología molecular y citogenética, cómo se trabaja en ellos y las últimas técnicas utilizadas en genética en investigación y para el diagnóstico. Los contenidos que desarrolla son los siguientes: Unidad 1. Caracterización de los procesos que se realizan en los laboratorios de citogenética y biología molecular. Unidad 2. Realización de cultivos celulares. Unidad 3. Aplicación de técnicas de análisis cromosómico. Unidad 4. Aplicación de técnicas de extracción de ácidos nucleicos. Unidad 5. Aplicación de técnicas de PCR y electroforesis al estudio de los ácidos nucleicos. Unidad 6. Aplicación de técnicas de hibridación con sonda. Unidad 7. Determinación de métodos de clonación y secuenciación del ADN. En cada unidad se ofrecen multitud de figuras, esquemas e imágenes reales del trabajo en el laboratorio que ilustran y apoyan las explicaciones. Al mismo tiempo, los mapas conceptuales que se incluyen al final de cada tema permiten al alumno el repaso de los conceptos principales y su fijación antes de que pase a realizar las actividades finales de comprobación (y de aplicación en las unidades donde los contenidos lo hacen posible) y las interesantes prácticas de laboratorio que se proponen. Finalmente, un útil glosario y una bibliografía final completan la obra. Es importante destacar que, debido al manejo de técnicas y equipos muy sofisticados de laboratorio, en la elaboración del libro se ha colaborado estrechamente con el Centro de Investigación Príncipe Felipe (CIPF) de Valencia, que ha asesorado a los autores en aquello que deben conocer los futuros técnicos de laboratorio que trabajen en biología molecular. Asimismo, la obra ofrece valiosos recursos didácticos para los profesores (ejercicios extra, vídeos para proyectar en el aula, etc.), a los que podrán acceder desde el área exclusiva de profesores de la editorial (enwww.paraninfo.es). Para realizar el libro, los autores, que creen firmemente en la docencia y en la profesión de enseñante, se han basado en el amor y en la provocación, entendida como fomento en los alumnos de un pensamiento propio. Los autores son profesores de la familia profesional de Sanidad en la Conselleria d'Educació de la Generalitat Valenciana y cuentan con una amplia experiencia docente en el Ciclo Formativo de Laboratorio de Diagnóstico Clínico.
